**CERTIFICATION REGARDING AUTHORSHIP AND FUNDING**

No party or counsel in the pending case authored the proposed amicus curiae brief in whole or in part, or made any monetary contribution intended to fund the preparation or submission of the brief. No person or entity other than the proposed *Amicus Curiae* made any monetary contribution intended to fund the preparation or submission of the brief.

Respectfully submitted,

DATED: April 3, 2015

SOUTH COAST AIR QUALITY  
MANAGEMENT DISTRICT  
KURT R. WIESE, GENERAL COUNSEL  
BARBARA BAIRD, CHIEF DEPUTY COUNSEL

By:   
Barbara Baird

*Attorneys for [proposed] Amicus Curiae*  
*SOUTH COAST AIR QUALITY*  
*MANAGEMENT DISTRICT*

## BRIEF OF AMICUS CURIAE

### SUMMARY OF ARGUMENT

The South Coast Air Quality Management District (SCAQMD) submits that this Court should not try to establish a hard-and-fast rule concerning whether lead agencies are required to correlate emissions of air pollutants with specific health consequences in their environmental impact reports (EIR). The level of detail required in EIRs is governed by a few, core CEQA (California Environmental Quality Act) principles. As this Court has stated, “[a]n EIR must include detail sufficient to enable those who did not participate in its preparation to understand and to consider meaningfully the issues raised by the proposed project.” (*Laurel Heights Improvement Assn. v. Regents of the Univ of Cal.* (1988) 47 Cal.3d 376, 405 [*“Laurel Heights I”*]) Accordingly, “an agency must use its best efforts to find out and disclose all that it reasonably can.” (*Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2007) 40 Cal.4th 412, 428 (quoting CEQA Guidelines § 15144)<sup>1</sup>). However, “[a]nalysis of environmental effects need not be exhaustive, but will be judged in light of what is reasonably feasible.” (*Association of Irrigated Residents v. County of Madera* (2003) 107 Cal.App.4th 1383, 1390; CEQA Guidelines §§ 15151, 15204(a).)

With regard to analysis of air quality related health impacts, EIRs must generally quantify a project’s pollutant emissions, but in some cases it is not feasible to correlate these emissions to specific, quantifiable health impacts (e.g., premature mortality; hospital admissions). In such cases, a general description of the adverse health impacts resulting from the pollutants at issue may be sufficient. In other cases, due to the magnitude

---

<sup>1</sup> The CEQA Guidelines are found at Cal. Code Regs., tit. 14 §§ 15000, *et seq.*

or nature of the pollution emissions, as well as the specificity of the project involved, it may be feasible to quantify health impacts. Or there may be a less exacting, but still meaningful analysis of health impacts that can feasibly be performed. In these instances, agencies should disclose those impacts.

SCAQMD also submits that whether or not an EIR complies with CEQA's informational mandates by providing sufficient, feasible analysis is a mixed question of fact and law. Pertinent here, the question of whether an EIR's discussion of health impacts from air pollution is sufficient to allow the public to understand and consider meaningfully the issues involves two inquiries: (1) Is it feasible to provide the information or analysis that a commenter is requesting or a petitioner is arguing should be required?; and (2) Even if it is feasible, is the agency relying on other policy or legal considerations to justify not preparing the requested analysis? The first question of whether an analysis is feasible is primarily a question of fact that should be judged by the substantial evidence standard. The second inquiry involves evaluating CEQA's information disclosure purposes against the asserted reasons to not perform the requested analysis. For example, an agency might believe that its EIR meets CEQA's informational disclosure standards even without a particular analysis, and therefore choose not to conduct that analysis. SCAQMD submits that this is more of a legal question, which should be reviewed de novo as a question of law.

## **ARGUMENT**

### **I. RELEVANT FACTUAL AND LEGAL FRAMEWORK.**

#### **A. Air Quality Regulatory Background**

The South Coast Air Quality Management District (SCAQMD) is one of the local and regional air pollution control districts and air quality

management districts in California. The SCAQMD is the regional air pollution agency for the South Coast Air Basin, which consists of all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino Counties. (Health & Saf. Code § 40410, 17 Cal. Code Reg. § 60104.) The SCAQMD also includes the Coachella Valley in Riverside County (Palm Springs area to the Salton Sea). (SCAQMD, *Final 2012 AQMP (Feb. 2013)*, <http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan>; then follow “chapter 7” hyperlink; pp 7-1, 7-3 (last visited Apr. 1, 2015).) The SCAQMD's jurisdiction includes over 16 million residents and has the worst or nearly the worst air pollution levels in the country for ozone and fine particulate matter. (SCAQMD, *Final 2012 AQMP (Feb. 2013)*, <http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan>; then follow “Executive Summary” hyperlink p. ES-1 (last visited Apr. 1, 2015).)

Under California law, the local and regional districts are primarily responsible for controlling air pollution from all sources except motor vehicles. (Health & Saf. Code § 40000.) The California Air Resources Board (CARB), part of the California Environmental Protection Agency, is primarily responsible for controlling pollution from motor vehicles. (*Id.*) The air districts must adopt rules to achieve and maintain the state and federal ambient air quality standards within their jurisdictions. (Health & Saf. Code § 40001.)

The federal Clean Air Act (CAA) requires the United States Environmental Protection Agency (EPA) to identify pollutants that are widely distributed and pose a threat to human health, developing a so-called “criteria” document. (42 U.S.C. § 7408; CAA § 108.) These pollutants are frequently called “criteria pollutants.” EPA must then establish “national ambient air quality standards” at levels “requisite to protect public health”,

allowing “an adequate margin of safety.” (42 U.S.C. § 7409; CAA § 109.) EPA has set standards for six identified pollutants: ozone, nitrogen dioxide, sulfur dioxide, carbon monoxide, particulate matter (PM), and lead. (U.S. EPA, National Ambient Air Quality Standards (NAAQS), <http://www.epa.gov/air/criteria.html> (last updated Oct. 21, 2014).)<sup>2</sup>

Under the Clean Air Act, EPA sets emission standards for motor vehicles and “nonroad engines” (mobile farm and construction equipment, marine vessels, locomotives, aircraft, etc.). (42 U.S.C. §§ 7521, 7547; CAA §§ 202, 213.) California is the only state allowed to establish emission standards for motor vehicles and most nonroad sources; however, it may only do so with EPA's approval. (42 U.S.C. §§ 7543(b), 7543(e); CAA §§ 209(b), 209(c).) Sources such as manufacturing facilities, power plants and refineries that are not mobile are often referred to as “stationary sources.” The Clean Air Act charges state and local agencies with the primary responsibility to attain the national ambient air quality standards. (42 U.S.C. § 7401(a)(3); CAA § 101(a)(3).) Each state must adopt and implement a plan including enforceable measures to achieve and maintain the national ambient air quality standards. (42 U.S.C. § 7410; CAA § 110.) The SCAQMD and CARB jointly prepare portion of the plan for the South Coast Air Basin and submit it for approval by EPA. (Health & Saf. Code §§ 40460, et seq.)

The Clean Air Act also requires state and local agencies to adopt a permit program requiring, among other things, that new or modified “major” stationary sources use technology to achieve the “lowest achievable emission rate,” and to control minor stationary sources as

---

<sup>2</sup> Particulate matter (PM) is further divided into two categories: fine particulate or PM<sub>2.5</sub> (particles with a diameter of less than or equal to 2.5 microns) and coarse particulate (PM<sub>10</sub>) (particles with a diameter of 10 microns or less). (U.S. EPA, Particulate Matter (PM), <http://www.epa.gov/airquality/particulatepollution/> (last visited Apr. 1, 2015).)

needed to help attain the standards. (42 U.S.C. §§ 7502(c)(5), 7503(a)(2), 7410(a)(2)(C); CAA §§ 172(c)(5), 173(a)(2), 110(a)(2)(C).) The air districts implement these permit programs in California. (Health & Saf. Code §§ 42300, et seq.)

The Clean Air Act also sets out a regulatory structure for over 100 so-called “hazardous air pollutants” calling for EPA to establish “maximum achievable control technology” (MACT) for sources of these pollutants. (42 U.S.C. § 7412(d)(2); CAA § 112(d)(2).) California refers to these pollutants as “toxic air contaminants” (TACs) which are subject to two state-required programs. The first program requires “air toxics control measures” for specific categories of sources. (Health & Saf. Code § 39666.) The other program requires larger stationary sources and sources identified by air districts to prepare “health risk assessments” for impacts of toxic air contaminants. (Health & Saf. Code §§ 44320(b), 44322, 44360.) If the health risk exceeds levels identified by the district as “significant,” the facility must implement a “risk reduction plan” to bring its risk levels below “significant” levels. Air districts may adopt additional more stringent requirements than those required by state law, including requirements for toxic air contaminants. (Health & Saf. Code § 41508; *Western Oil & Gas Assn. v. Monterey Bay Unified APCD* (1989) 49 Cal.3d 408, 414.) For example, SCAQMD has adopted a rule requiring new or modified sources to keep their risks below specified levels and use best available control technology (BACT) for toxics. (SCAQMD, *Rule 1401-New Source Review of Toxic Air Contaminants*, <http://www.aqmd.gov/home/regulations/rules/scaqmd-rule-book/regulation-xiv>; then follow “Rule 1401” hyperlink (last visited Apr. 1, 2015).)

## **B. The SCAQMD's Role Under CEQA**

The California Environmental Quality Act (CEQA) requires public agencies to perform an environmental review and appropriate analysis for projects that they implement or approve. (Pub. Resources Code § 21080(a).) The agency with primary approval authority for a particular project is generally the “lead agency” that prepares the appropriate CEQA document. (CEQA Guidelines §§ 15050, 15051.) Other agencies having a subsequent approval authority over all or part of a project are called “responsible” agencies that must determine whether the CEQA document is adequate for their use. (CEQA Guidelines §§ 15096(c), 15381.) Lead agencies must also consult with and circulate their environmental impact reports to “trustee agencies” and agencies “with jurisdiction by law” including “authority over resources which may be affected by the project.” (Pub. Resources Code §§ 21104(a), 21153; CEQA Guidelines §§ 15086(a)(3), 15073(c).) The SCAQMD has a role in all these aspects of CEQA.

Fulfilling its responsibilities to implement its air quality plan and adopt rules to attain the national ambient air quality standards, SCAQMD adopts a dozen or more rules each year to require pollution reductions from a wide variety of sources. The SCAQMD staff evaluates each rule for any adverse environmental impact and prepares the appropriate CEQA document. Although most rules reduce air emissions, they may have secondary environmental impacts such as use of water or energy or disposal of waste—e.g., spent catalyst from control equipment.<sup>3</sup>

---

<sup>3</sup> The SCAQMD's CEQA program for its rules is a “Certified Regulatory Program” under which it prepares a “functionally equivalent” document in lieu of a negative declaration or EIR. (Pub. Resources Code § 21080.5, CEQA Guidelines § 15251(l).)

The SCAQMD also approves a large number of permits every year to construct new, modified, or replacement facilities that emit regulated air pollutants. The majority of these air pollutant sources have already been included in an earlier CEQA evaluation for a larger project, are currently being evaluated by a local government as lead agency, or qualify for an exemption. However, the SCAQMD sometimes acts as lead agency for major projects where the local government does not have a discretionary approval. In such cases, SCAQMD prepares and certifies a negative declaration or environmental impact report (EIR) as appropriate.<sup>4</sup> SCAQMD evaluates perhaps a dozen such permit projects under CEQA each year. SCAQMD is often also a “responsible agency” for many projects since it must issue a permit for part of the projects (e.g., a boiler used to provide heat in a commercial building). For permit projects evaluated by another lead agency under CEQA, SCAQMD has the right to determine that the CEQA document is inadequate for its purposes as a responsible agency, but it may not do so because its permit program already requires all permitted sources to use the best available air pollution control technology. (SCAQMD, *Rule 1303(a)(1) – Requirements*, <http://www.aqmd.gov/home/regulations/rules/scaqmd-rule-book/regulation-xiii>; then follow “Rule 1303” hyperlink (last visited Apr. 1, 2015).)

Finally, SCAQMD receives as many as 60 or more CEQA documents each month (around 500 per year) in its role as commenting agency or an agency with “jurisdiction by law” over air quality—a natural resource affected by the project. (Pub. Resources Code §§ 21104(a), 21153; CEQA Guidelines § 15366(a)(3).) The SCAQMD staff provides comments on as many as 25 or 30 such documents each month.

---

<sup>4</sup> The SCAQMD's permit projects are not included in its Certified Regulatory Program, and are evaluated under the traditional local government CEQA analysis. (Pub. Resources Code §§ 21150-21154.)

(SCAQMD Governing Board Agenda, Apr. 3, 2015, Agenda Item 16, Attachment A, <http://www.aqmd.gov/home/library/meeting-agendas-minutes/agenda?title=governing-board-meeting-agenda-april-3-2015>; then follow “16. Lead Agency Projects and Environmental Documents Received by SCAQMD” hyperlink (last visited Apr. 1, 2015).) Of course, SCAQMD focuses its commenting efforts on the more significant projects.

Typically, SCAQMD comments on the adequacy of air quality analysis, appropriateness of assumptions and methodology, and completeness of the recommended air quality mitigation measures. Staff may comment on the need to prepare a health risk assessment detailing the projected cancer and noncancer risks from toxic air contaminants resulting from the project, particularly the impacts of diesel particulate matter, which CARB has identified as a toxic air contaminant based on its carcinogenic effects. (California Air Resources Board, Resolution 98-35, Aug. 27, 1998, <http://www.arb.ca.gov/regact/diesltac/diesltac.htm>; then follow Resolution 98-35 hyperlink (last visited Apr. 1, 2015).) Because SCAQMD already requires new or modified stationary sources of toxic air contaminants to use the best available control technology for toxics and to keep their risks below specified levels, (SCAQMD Rule 1401, *supra*, note 15), the greatest opportunity to further mitigate toxic impacts through the CEQA process is by reducing emissions—particularly diesel emissions—from vehicles.

**II. THIS COURT SHOULD NOT SET A HARD-AND-FAST RULE CONCERNING THE EXTENT TO WHICH AN EIR MUST CORRELATE A PROJECT’S EMISSION OF POLLUTANTS WITH RESULTING HEALTH IMPACTS.**

Numerous cases hold that courts do not review the correctness of an EIR's conclusions but rather its sufficiency as an informative document. (*Laurel Heights 1*, *supra*, 47 Cal.3d at p. 392; *Citizens of Goleta Valley v.*

*Bd. of Supervisors* (1990) 52 Cal.3d 553, 569; *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184, 1197.)

As stated by the Court of Appeal in this case, where an EIR has addressed a topic, but the petitioner claims that the information provided about that topic is insufficient, courts must “draw[] a line that divides *sufficient* discussions from those that are *insufficient*.” (*Sierra Club v. County of Fresno* (2014) 226 Cal.App.4th 704 (superseded by grant of review) 172 Cal.Rptr.3d 271, 290.) The Court of Appeal readily admitted that “[t]he terms themselves – sufficient and insufficient – provide little, if any, guidance as to where the line should be drawn. They are simply labels applied once the court has completed its analysis.” (*Id.*)

The CEQA Guidelines, however, provide guidance regarding what constitutes a sufficient discussion of impacts. Section 15151 states that “the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible.” Case law reflects this: “Analysis of environmental effects need not be exhaustive, but will be judged in light of what was reasonably feasible.” (*Association of Irrigated Residents v. County of Madera, supra*, 107 Cal.App.4th at p. 1390; see also CEQA Guidelines § 15204(a).)

Applying this test, this Court cannot realistically establish a hard-and-fast rule that an analysis correlating air pollution impacts of a project to quantified resulting health impacts is always required, or indeed that it is never required. Simply put, in some cases such an analysis will be “feasible”; in some cases it will not.

For example, air pollution control districts often require a proposed new source of toxic air contaminants to prepare a “health risk assessment” before issuing a permit to construct. District rules often limit the allowable cancer risk the new source may cause to the “maximally exposed individual” (worker and residence exposures). (*See, e.g.*, SCAQMD Rule 1401(c)(8); 1401(d)(1), *supra* note 15.) In order to perform this analysis, it

is necessary to have data regarding the sources and types of air toxic contaminants, location of emission points, velocity of emissions, the meteorology and topography of the area, and the location of receptors (worker and residence). (SCAQMD, *Supplemental Guidelines for Preparing Risk Assessments for the Air Toxics "Hot Spots" Information and Assessment Act (AB2588)*, pp. 11-16; (last visited Apr. 1, 2015) <http://www.aqmd.gov/home/library/documents-support-material>; "Guidelines" hyperlink; AB2588; then follow AB2588 Risk Assessment Guidelines hyperlink.)

Thus, it is feasible to determine the health risk posed by a new gas station locating at an intersection in a mixed use area, where receptor locations are known. On the other hand, it may not be feasible to perform a health risk assessment for airborne toxics that will be emitted by a generic industrial building that was built on "speculation" (i.e., without knowing the future tenant(s)). Even where a health risk assessment can be prepared, however, the resulting maximum health risk value is only a calculation of risk—it does not necessarily mean anyone will contract cancer as a result of the project.

In order to find the "cancer burden" or expected additional cases of cancer resulting from the project, it is also necessary to know the numbers and location of individuals living within the "zone of impact" of the project: i.e., those living in areas where the projected cancer risk from the project exceeds one in a million. (SCAQMD, Health Risk Assessment Summary form, <http://www.aqmd.gov/home/forms>; filter by "AB2588" category; then "Health Risk Assessment" hyperlink (last visited Apr. 1, 2015).) The affected population is divided into bands of those exposed to at least 1 in a million risk, those exposed to at least 10 in a million risk, etc. up to those exposed at the highest levels. (*Id.*) This data allows agencies to calculate an approximate number of additional cancer cases expected from

the project. However, it is not possible to predict which particular individuals will be affected.

For the so-called criteria pollutants<sup>5</sup>, such as ozone, it may be more difficult to quantify health impacts. Ozone is formed in the atmosphere from the chemical reaction of the nitrogen oxides (NO<sub>x</sub>) and volatile organic compounds (VOC) in the presence of sunlight. (U.S. EPA, Ground Level Ozone, <http://www.epa.gov/airquality/ozonepollution/> (last updated Mar. 25, 2015).) It takes time and the influence of meteorological conditions for these reactions to occur, so ozone may be formed at a distance downwind from the sources. (U.S. EPA, *Guideline on Ozone Monitoring Site Selection* (Aug. 1998) EPA-454/R-98-002 § 5.1.2, <http://www.epa.gov/ttnamti1/archive/cpreldoc.html> (last visited Apr. 1, 2015).) NO<sub>x</sub> and VOC are known as “precursors” of ozone.

Scientifically, health effects from ozone are correlated with increases in the ambient level of ozone in the air a person breathes. (U.S. EPA, *Health Effects of Ozone in the General Population*, Figure 9, <http://www.epa.gov/apti/ozonehealth/population.html#levels> (last visited Apr. 1, 2015).) However, it takes a large amount of additional precursor emissions to cause a modeled increase in ambient ozone levels over an entire region. For example, the SCAQMD's 2012 AQMP showed that reducing NO<sub>x</sub> by 432 tons per day (157,680 tons/year) and reducing VOC by 187 tons per day (68,255 tons/year) would reduce ozone levels at the SCAQMD's monitor site with the highest levels by only 9 parts per billion. (South Coast Air Quality Management District, *Final 2012 AQMP (February 2013)*, <http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan>; then follow “Appendix V: Modeling & Attainment Demonstrations” hyperlink,

---

<sup>5</sup> See discussion of types of pollutants, *supra*, Part I.A.

pp. v-4-2, v-7-4, v-7-24.) SCAQMD staff does not currently know of a way to accurately quantify ozone-related health impacts caused by NO<sub>x</sub> or VOC emissions from relatively small projects.

On the other hand, this type of analysis may be feasible for projects on a regional scale with very high emissions of NO<sub>x</sub> and VOCs, where impacts are regional. For example, in 2011 the SCAQMD performed a health impact analysis in its CEQA document for proposed Rule 1315, which authorized various newly-permitted sources to use offsets from the districts “internal bank” of emission reductions. This CEQA analysis accounted for essentially *all* the increases in emissions due to new or modified sources in the District between 2010 and 2030.<sup>6</sup> The SCAQMD was able to correlate this very large emissions increase (e.g., 6,620 pounds per day NO<sub>x</sub> (1,208 tons per year), 89,180 pounds per day VOC (16,275 tons per year)) to expected health outcomes from ozone and particulate matter (e.g., 20 premature deaths per year and 89,947 school absences in the year 2030 due to ozone).<sup>7</sup> (SCAQMD Governing Board Agenda, February 4, 2011, Agenda Item 26, *Assessment for: Re-adoption of Proposed Rule 1315 – Federal New Source Review Tracking System* (see hyperlink in fn 6) at p. 4.1-35, Table 4.1-29.)

---

<sup>6</sup> (SCAQMD Governing Board Agenda, February 4, 2011, Agenda Item 26, Attachment G, *Assessment for: Re-adoption of Proposed Rule 1315 – Federal New Source Review Tracking System, Vol. 1, p.4.0-6*, <http://www.aqmd.gov/home/library/meeting-agendas-minutes/agenda?title=governing-board-meeting-agenda-february-4-2011>; the follow “26. Adopt Proposed Rule 1315 – Federal New Source Review Tracking System” (last visited April 1, 2015).)

<sup>7</sup> The SCAQMD was able to establish the location of future NO<sub>x</sub> and VOC emissions by assuming that new projects would be built in the same locations and proportions as existing stationary sources. This CEQA document was upheld by the Los Angeles County Superior Court in *Natural Res. Def. Council v SCAQMD*, Los Angeles Superior Court No. BS110792).

However, a project emitting only 10 tons per year of NO<sub>x</sub> or VOC is small enough that its regional impact on ambient ozone levels may not be detected in the regional air quality models that are currently used to determine ozone levels. Thus, in this case it would not be feasible to directly correlate project emissions of VOC or NO<sub>x</sub> with specific health impacts from ozone. This is in part because ozone formation is not linearly related to emissions. Ozone impacts vary depending on the location of the emissions, the location of other precursor emissions, meteorology and seasonal impacts, and because ozone is formed some time later and downwind from the actual emission. (EPA Guideline on Ozone Monitoring Site Selection (Aug. 1998) EPA-454/R-98-002, § 5.1.2; <https://www.epa.gov/ttnamti1/archive/cpreldoc.html>; then search “Guideline on Ozone Monitoring Site Selection” click on pdf) (last viewed Apr. 1, 2015).)

SCAQMD has set its CEQA “significance” threshold for NO<sub>x</sub> and VOC at 10 tons per year (expressed as 55 lb/day). (SCAQMD, *Air Quality Analysis Handbook*, <http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook>; then follow “SCAQMD Air Quality Significance Thresholds” hyperlink (last visited Apr. 1, 2015).) This is because the federal Clean Air Act defines a “major” stationary source for “extreme” ozone nonattainment areas such as SCAQMD as one emitting 10 tons/year. (42 U.S.C. §§ 7511a(e), 7511a(f); CAA §§ 182(e), 182(f).) Under the Clean Air Act, such sources are subject to enhanced control requirements (42 U.S.C. §§ 7502(c)(5), 7503; CAA §§ 172(c)(5), 173), so SCAQMD decided this was an appropriate threshold for making a CEQA “significance” finding and requiring feasible mitigation. Essentially, SCAQMD takes the position that a source that emits 10 tons/year of NO<sub>x</sub> or VOC would contribute cumulatively to ozone formation. Therefore, lead agencies that use SCAQMD’s thresholds of significance may determine

that many projects have “significant” air quality impacts and must apply all feasible mitigation measures, yet will not be able to precisely correlate the project to quantifiable health impacts, unless the emissions are sufficiently high to use a regional modeling program.

In the case of particulate matter (PM<sub>2.5</sub>)<sup>8</sup>, another “criteria” pollutant, SCAQMD staff is aware of two possible methods of analysis. SCAQMD used regional modeling to predict expected health impacts from its proposed Rule 1315, as mentioned above. Also, the California Air Resources Board (CARB) has developed a methodology that can predict expected mortality (premature deaths) from large amounts of PM<sub>2.5</sub>. (California Air Resources Board, *Health Impacts Analysis: PM Premature Death Relationship*, [http://www.arb.ca.gov/research/health/pm-mort/pm-mort\\_arch.htm](http://www.arb.ca.gov/research/health/pm-mort/pm-mort_arch.htm) (last reviewed Jan. 19, 2012).) SCAQMD used the CARB methodology to predict impacts from three very large power plants (e.g., 731-1837 lbs/day). (Final Environmental Assessment for Rule 1315, *supra*, pp 4.0-12, 4.1-13, 4.1-37 (e.g., 125 premature deaths in the entire SCAQMD in 2030), 4.1-39 (0.05 to 1.77 annual premature deaths from power plants.) Again, this project involved large amounts of additional PM<sub>2.5</sub> in the District, up to 2.82 tons/day (5,650 lbs/day of PM<sub>2.5</sub>, or, or 1029 tons/year. (*Id.* at table 4.1-4, p. 4.1-10.)

However, the primary author of the CARB methodology has reported that this PM<sub>2.5</sub> health impact methodology is not suited for small projects and may yield unreliable results due to various uncertainties.<sup>9</sup> (SCAQMD, *Final Subsequent Mitigated Negative Declaration for: Warren*

---

<sup>8</sup> SCAQMD has not attained the latest annual or 24-hour national ambient air quality standards for “PM<sub>2.5</sub>” or particulate matter less than 2.5 microns in diameter.

<sup>9</sup> Among these uncertainties are the representativeness of the population used in the methodology, and the specific source of PM and the corresponding health impacts. (*Id.* at p. 2-24.)

*E&P, Inc. WTU Central Facility, New Equipment Project* (certified July 19, 2011), <http://www.aqmd.gov/home/library/documents-support-material/lead-agency-permit-projects/permit-project-documents---year-2011>; then follow “Final Subsequent Mitigated Negative Declaration for Warren E&P Inc. WTU Central Facility, New Equipment Project” hyperlink, pp. 2-22, 2-23 (last visited Apr. 1, 2015).) Therefore, when SCAQMD prepared a CEQA document for the expansion of an existing oil production facility, with very small PM<sub>2.5</sub> increases (3.8 lb/day) and a very small affected population, staff elected not to use the CARB methodology for using estimated PM<sub>2.5</sub> emissions to derive a projected premature mortality number and explained why it would be inappropriate to do so. (*Id.* at pp 2-22 to 2-24.) SCAQMD staff concluded that use of this methodology for such a small source could result in unreliable findings and would not provide meaningful information. (*Id.* at pp. 2-23, 2-25.) This CEQA document was not challenged in court.

In the above case, while it may have been technically possible to plug the data into the methodology, the results would not have been reliable or meaningful. SCAQMD believes that an agency should not be required to perform analyses that do not produce reliable or meaningful results. This Court has already held that an agency may decline to use even the “normal” “existing conditions” CEQA baseline where to do so would be misleading or without informational value. (*Neighbors for Smart Rail v. Exposition Metro Line* (2013) 57 Cal.4th 439, 448, 457.) The same should be true for a decision that a particular study or analysis would not provide reliable or meaningful results.<sup>10</sup>

---

<sup>10</sup> Whether a particular study would result in “informational value” is a part of deciding whether it is “feasible.” CEQA defines “feasible” as “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and

Therefore, it is not possible to set a hard-and-fast rule on whether a correlation of air quality impacts with specific quantifiable health impacts is required in all cases. Instead, the result turns on whether such an analysis is reasonably feasible in the particular case.<sup>11</sup> Moreover, what is reasonably feasible may change over time as scientists and regulatory agencies continually seek to improve their ability to predict health impacts. For example, CARB staff has been directed by its Governing Board to reassess and improve the methodology for estimating premature deaths. (California Air Resources Board, *Health Impacts Analysis: PM Mortality Relationship*, <http://www.arb.ca.gov/research/health/pm-mort/pm-mort.htm> (last reviewed Dec. 29, 2010).) This factor also counsels against setting any hard-and-fast rule in this case.

### **III. THE QUESTION OF WHETHER AN EIR CONTAINS SUFFICIENT ANALYSIS TO MEET CEQA'S REQUIREMENTS IS A MIXED QUESTION OF FACT AND LAW GOVERNED BY TWO DIFFERENT STANDARDS OF REVIEW.**

#### **A. Standard of Review for Feasibility Determination and Sufficiency as an Informative Document**

A second issue in this case is whether courts should review an EIR's informational sufficiency under the "substantial evidence" test as argued by Friant Ranch or the "independent judgment" test as argued by Sierra Club.

---

technological factors." (Pub. Resources Code § 21061.1.) A study cannot be "accomplished in a *successful* manner" if it produces unreliable or misleading results.

<sup>11</sup> In this case, the lead agency did not have an opportunity to determine whether the requested analysis was feasible because the comment was non-specific. Therefore, SCAQMD suggests that this Court, after resolving the legal issues in the case, direct the Court of Appeal to remand the case to the lead agency for a determination of whether the requested analysis is feasible. Because Fresno County, the lead agency, did not seek review in this Court, it seems likely that the County has concluded that at least some level of correlation of air pollution with health impacts is feasible.

As this Court has explained, “a reviewing court must adjust its scrutiny to the nature of the alleged defect, depending on whether the claim is predominantly one of improper procedure or a dispute over the facts.” (*Vineyard Area Citizens v. City of Rancho Cordova, supra*, 40 Cal.4th at 435.) For questions regarding compliance with proper procedure or other legal questions, courts review an agency’s action de novo under the “independent judgment” test. (*Id.*) On the other hand, courts review factual disputes only for substantial evidence, thereby “accord[ing] greater deference to the agency’s substantive factual conclusions.” (*Id.*)

Here, Friant Ranch and Sierra Club agree that the case involves the question of whether an EIR includes sufficient information regarding a project’s impacts. However, they disagree on the proper standard of review for answering this question: Sierra Club contends that courts use the independent judgment standard to determine whether an EIR’s analysis is sufficient to meet CEQA’s informational purposes,<sup>12</sup> while Friant Ranch contends that the substantial evidence standard applies to this question.

///  
///  
///  
///  
///  
///  
///  
///  
///  
///

---

<sup>12</sup> Sierra Club acknowledges that courts use the substantial evidence standard when reviewing predicate factual issues, but argues that courts ultimately decide as a matter of law what CEQA requires. (Answering Brief, pp. 14, 23.)

SCAQMD submits that the issue is more nuanced than either party contends. We submit that, whether a CEQA document includes sufficient analysis to satisfy CEQA's informational mandates is a mixed question of fact and law,<sup>13</sup> containing two levels of inquiry that should be judged by different standards.<sup>14</sup>

The state CEQA Guidelines set forth standards for the adequacy of environmental analysis. Guidelines Section 15151 states:

An EIR should be prepared with a sufficient degree of analysis to provide decision makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection, but for adequacy, completeness, and a good-faith effort at full disclosure.

In this case, the basic question is whether the underlying analysis of air quality impacts made the EIR "sufficient" as an informative document. However, whether the EIR's analysis was sufficient is judged in light of what was reasonably feasible. This represents a mixed question of fact and law that is governed by two different standards of review.

---

<sup>13</sup> Friant Ranch actually states that the claim that an EIR lacks sufficient relevant information is, "most properly thought of as raising mixed questions of fact and law." (Opening Brief, p. 27.) However, the remainder of its argument claims that the court should apply the substantial evidence standard of review to all aspects of the issue.

<sup>14</sup> Mixed questions of fact and law issues may implicate predominantly factual subordinate questions that are reviewed under the substantial evidence test even though the ultimate question may be reviewed by the independent judgment test. *Crocker National Bank v. City and County of San Francisco* (1989) 49 Cal.3d 881, 888-889.

SCAQMD submits that an EIR's sufficiency as an informational document is ultimately a legal question that courts should determine using their independent judgment. This Court's language in *Laurel Heights I* supports this position. As this Court explained: "The court does not pass upon the correctness of the EIR's environmental conclusions, but only upon its *sufficiency as an informative document.*" (*Laurel Heights I, supra*, 47 Cal.3d at 392-393) (emphasis added.) As described above, the Court in *Vineyard Area Citizens v. City of Rancho Cordova, supra*, 40 Cal.4th at 431, also used its independent judgment to determine what level of analysis CEQA requires for water supply impacts. The Court did not defer to the lead agency's opinion regarding the law's requirements; rather, it determined for itself what level of analysis was necessary to meet "[t]he law's informational demands." (*Id.* at p. 432.) Further, existing case law also holds that where an agency fails to comply with CEQA's information disclosure requirements, the agency has "failed to proceed in the manner required by law." (*Save Our Peninsula Comm. v. Monterey County Bd. of Supervisors* (2001) 87 Cal.App.4th 99, 118.)

However, whether an EIR satisfies CEQA's requirements depends in part on whether it was reasonably feasible for an agency to conduct additional or more thorough analysis. EIRs must contain "a detailed statement" of a project's impacts (Pub. Res. Code § 21061), and an agency must "use its best efforts to find out and disclose all that it reasonably can." (CEQA Guidelines § 15144.) Nevertheless, "the sufficiency of an EIR is to be reviewed in light of what is reasonably feasible." (CEQA Guidelines § 15151.)

SCAQMD submits that the question of whether additional analysis or a particular study suggested by a commenter is "feasible" is generally a question of fact. Courts have already held that whether a particular alternative is "feasible" is reviewed by the substantial evidence test.

(*Uphold Our Heritage v. Town of Woodside* (2007) 147 Cal.App.4th 587, 598-99; *Center for Biological Diversity v. County of San Bernardino* (2010) 185 Cal.App.4th 866, 883.) Thus, if a lead agency determines that a particular study or analysis is infeasible, that decision should generally be judged by the substantial evidence standard. However, SCAQMD urges this Court to hold that lead agencies must explain the basis of any determination that a particular analysis is infeasible in the EIR itself. An EIR must discuss information, including issues related to the feasibility of particular analyses “in sufficient detail to enable meaningful participation and criticism by the public. ‘[W]hatever is required to be considered in an EIR must be in that formal report; what any official might have known from other writings or oral presentations cannot supply what is lacking in the report.’” (*Laurel Heights I, supra*, 47 Cal.3d at p. 405 (quoting *Santiago County Water District v. County of Orange* (1981) 118 Cal.App.3d 818, 831) (discussing analysis of alternatives).) The evidence on which the determination is based should also be summarized in the EIR itself, with appropriate citations to reference materials if necessary. Otherwise commenting agencies such as SCAQMD would be forced to guess where the lead agency's evidence might be located, thus thwarting effective public participation.

Moreover, if a lead agency determines that a particular study or analysis would not result in reliable or useful information and for that reason is not feasible, that determination should be judged by the substantial evidence test. (See *Neighbors for Smart Rail v. Exposition Metro Line Construction Authority, supra*, 57 Cal.4th 439, 448, 457:

whether “existing conditions” baseline would be misleading or uninformative judged by substantial evidence standard.<sup>15</sup>)

If the lead agency’s determination that a particular analysis or study is not feasible is supported by substantial evidence, then the agency has not violated CEQA’s information disclosure provisions, since it would be infeasible to provide additional information. This Court’s decisions provide precedent for such a result. For example, this Court determined that the issue of whether the EIR should have included a more detailed discussion of future herbicide use was resolved because substantial evidence supported the agency’s finding that “the precise parameters of future herbicide use could not be predicted.” *Ebbetts Pass Forest Watch v. California Dept. of Forestry & Fire Protection* (2008) 43 Cal.4th 936, 955.

Of course, SCAQMD expects that courts will continue to hold lead agencies to their obligations to consult with, and not to ignore or misrepresent, the views of sister agencies having special expertise in the area of air quality. (*Berkeley Keep Jets Over the Bay v. Board of Port Commissioners* (2007) 91 Cal.App.4<sup>th</sup> 1344, 1364 n.11.) In some cases, information provided by such expert agencies may establish that the purported evidence relied on by the lead agency is not in fact “substantial”. (*Id.* at pp. 1369-1371.)

In sum, courts retain ultimate responsibility to determine what CEQA requires. However, the law does not require exhaustive analysis, but only what is reasonably feasible. Agencies deserve deference for their factual determinations regarding what type of analysis is reasonably feasible. On the other hand, if a commenter requests more information, and the lead agency declines to provide it but does *not* determine that the

---

<sup>15</sup> The substantial evidence standard recognizes that the courts "have neither the resources nor the scientific expertise" to weigh conflicting evidence on technical issues. (*Laurel Heights I, supra*, 47 Cal.3d 376, 393.)

requested study or analysis would be infeasible, misleading or uninformative, the question becomes whether the omission of that analysis renders the EIR inadequate to satisfy CEQA's informational purposes. (*Id.* at pp. 1370-71.) Again, this is predominantly a question of law and should be judged by the de novo or independent judgment standard of review. Of course, this Court has recognized that a "project opponent or reviewing court can always imagine some additional study or analysis that might provide helpful information. It is not for them to design the EIR. That further study...might be helpful does not make it necessary." (*Laurel Heights I, supra*, 47 Cal.3d 376, 415 – see also CEQA Guidelines § 15204(a) [CEQA "does not require a lead agency to conduct every test. . . recommended or demanded by commenters."].) Courts, then, must adjudicate whether an omission of particular information renders an EIR inadequate to serve CEQA's informational purposes.<sup>16</sup>

---

<sup>16</sup> We recognize that there is case law stating that the substantial evidence standard applies to "challenges to the scope of an EIR's analysis of a topic" as well as the methodology used and the accuracy of the data relied on in the document "because these types of challenges involve factual questions." (*Bakersfield Citizens for Local Control v. City of Bakersfield, supra*, 124 Cal.App.4<sup>th</sup> 1184, 1198, and cases relied on therein.) However, we interpret this language to refer to situations where the question of the scope of the analysis really is factual—that is, where it involves whether further analysis is feasible, as discussed above. This interpretation is supported by the fact that the *Bakersfield* court expressly rejected an argument that a claimed "omission of information from the EIR should be treated as inquiries whether there is substantial evidence supporting the decision approving the project." *Bakersfield, supra*, 124 Cal.App.4<sup>th</sup> at p. 1208. And the *Bakersfield* court ultimately decided that the lead agency must analyze the connection between the identified air pollution impacts and resulting health impacts, even though the EIR already included some discussion of air-pollution-related respiratory illnesses. *Bakersfield, supra*, 124 Cal.App.4<sup>th</sup> at p. 1220. Therefore, the court must not have interpreted this question as one of the "scope of the analysis" to be judged by the substantial evidence standard.

**B. Friant Ranch's Rationale for Rejecting the Independent Judgment Standard of Review is Unsupported by Case Law.**

In its brief, Friant Ranch makes a distinction between cases where a required CEQA topic is not discussed at all (to be reviewed by independent judgment as a failure to proceed in the manner required by law) and cases where a topic is discussed, but the commenter claims the information provided is insufficient (to be judged by the substantial evidence test). (Opening Brief, pp. 13-17.) The Court of Appeal recognized these two types of cases, but concluded that both raised questions of law. (*Sierra Club v. County of Fresno* (2014) 226 Cal.App.4th 704 (superseded by grant of review) 172 Cal.Rptr.3d 271, 290.) We believe the distinction drawn by Friant Ranch is unduly narrow, and inconsistent with cases which have concluded that CEQA documents are insufficient. In many instances, CEQA's requirements are stated broadly, and the courts must interpret the law to determine what level of analysis satisfies CEQA's mandate for providing meaningful information, even though the EIR discusses the issue to some extent.

For example, the CEQA Guidelines require discussion of the existing environmental baseline. In *County of Amador v. El Dorado County Water Agency* (1999) 76 Cal.App.4th 931, 954-955, the lead agency had discussed the environmental baseline by describing historic month-end water levels in the affected lakes. However, the court held that this was not an adequate baseline discussion because it failed to discuss the timing and amounts of past actual water releases, to allow comparison with the proposed project. The court evidently applied the independent judgment test to its decision, even though the agency discussed the issue to some extent.

Likewise, in *Vineyard Area Citizens* (2007) 40 Cal.4th 412, this Court addressed the question of whether an EIR's analysis of water supply impacts complied with CEQA. The parties agreed that the EIR was required to analyze the effects of providing water to the development project, "and that in order to do so the EIR had, in some manner, to identify the planned sources of that water." (*Vineyard Area Citizens, supra*, at p. 428.) However, the parties disagreed as to the level of detail required for this analysis and "what level of uncertainty regarding the availability of water supplies can be tolerated in an EIR . . . ." (*Id.*) In other words, the EIR had analyzed water supply impacts for the project, but the petitioner claimed that the analysis was insufficient.

This Court noted that neither CEQA's statutory language or the CEQA Guidelines specifically addressed the question of how precisely an EIR must discuss water supply impacts. (*Id.*) However, it explained that CEQA "states that '[w]hile foreseeing the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can.'" (*Id.*, [Guidelines § 15144].) The Court used this general principle, along with prior precedent, to elucidate four "principles for analytical adequacy" that are necessary in order to satisfy "CEQA's informational purposes." (*Vineyard Area Citizens, supra*, at p. 430.) The Court did not defer to the agency's determination that the EIR's analysis of water supply impacts was sufficient. Rather, this Court used its independent judgment to determine for itself the level of analysis required to satisfy CEQA's fundamental purposes. (*Vineyard Area Citizens, supra*, at p. 441: an EIR does not serve its purposes where it neglects to explain likely sources of water and "... leaves long term water supply considerations to later stages of the project.")

Similarly, the CEQA Guidelines require an analysis of noise impacts of the project. (Appendix G, “Environmental Checklist Form.”<sup>17</sup>) In *Gray v. County of Madera* (2008) 167 Cal.App.4th 1099, 1123, the court held that the lead agency’s noise impact analysis was inadequate even though it had addressed the issue and concluded that the increase would not be noticeable. If the court had been using the substantial evidence standard, it likely would have upheld this discussion.

Therefore, we do not agree that the issue can be resolved on the basis suggested by Friant Ranch, which would apply the substantial evidence standard to *every* challenge to an analysis that addresses a required CEQA topic. This interpretation would subvert the courts’ proper role in interpreting CEQA and determining what the law requires.

Nor do we agree that the Court of Appeal in this case violated CEQA’s prohibition on courts interpreting its provisions “in a manner which imposes procedural or substantive requirements beyond those explicitly stated in this division or in the state guidelines.” (Pub. Resources Code § 21083.1.) CEQA requires an EIR to describe *all* significant impacts of the project on the environment. (Pub. Resources Code § 21100(b)(2); *Vineyard Area Citizens, supra*, at p. 428.) Human beings are part of the environment, so CEQA requires EIRs to discuss a project’s significant impacts on human health. However, except in certain particular circumstances,<sup>18</sup> neither the CEQA statute nor Guidelines specify the precise level of analysis that agencies must undertake to satisfy the law’s requirements. (see, e.g., CEQA Guidelines § 15126.2(a) [EIRs must describe “health and safety problems caused by {a project’s} physical changes”].) Accordingly, courts must interpret CEQA as a whole to

---

<sup>17</sup> Association of Environmental Professionals, 2015 CEQA Statute and Guidelines (2015) p.287.

<sup>18</sup> E.g., Pub. Resources Code § 21151.8(C)(3)(B)(iii) (requiring specific type of health risk analysis for siting schools).

determine whether a particular EIR is sufficient as an informational document. A court determining whether an EIR's discussion of human health impacts is legally sufficient does not constitute imposing a new substantive requirement.<sup>19</sup> Under Friant Ranch's theory, the above-referenced cases holding a CEQA analysis inadequate would have violated the law. This is not a reasonable interpretation.

#### **IV. COURTS MUST SCRUPULOUSLY ENFORCE THE REQUIREMENTS THAT LEAD AGENCIES CONSULT WITH AND OBTAIN COMMENTS FROM AIR DISTRICTS**

Courts must "scrupulously enforce" CEQA's legislatively mandated requirements. (*Vineyard Area Citizens, supra*, 40 Cal.4<sup>th</sup> 412, 435.) Case law has firmly established that lead agencies must consult with the relevant air pollution control district before conducting an initial study, and must provide the districts with notice of the intention to adopt a negative declaration (or EIR). (*Schenck v. County of Sonoma* (2011) 198 Cal.App.4th 949, 958.) As *Schenck* held, neither publishing the notice nor providing it to the State Clearinghouse was a sufficient substitute for sending notice directly to the air district. (*Id.*) Rather, courts "must be satisfied that [administrative] agencies have fully complied with the procedural requirements of CEQA, since only in this way can the important public purposes of CEQA be protected from subversion." *Schenck*, 198 Cal.App.4th at p. 959 (citations omitted).<sup>20</sup>

---

<sup>19</sup> We submit that Public Resources Code Section 21083.1 was intended to prevent courts from, for example, holding that an agency must analyze economic impacts of a project where there are no resulting environmental impacts (see CEQA Guidelines § 15131), or imposing new procedural requirements, such as imposing additional public notice requirements not set forth in CEQA or the Guidelines.

<sup>20</sup> Lead agencies must consult air districts, as public agencies with jurisdiction by law over resources affected by the project, *before* releasing an EIR. (Pub. Resources Code §§ 21104(a); 21153.) Moreover, air

Lead agencies should be aware, therefore, that failure to properly seek and consider input from the relevant air district constitutes legal error which may jeopardize their project approvals. For example, the court in *Fall River Wild Trout Foundation v. County of Shasta*, (1999) 70 Cal.App.4th 482, 492 held that the failure to give notice to a trustee agency (Department of Fish and Game) was prejudicial error requiring reversal. The court explained that the lack of notice prevented the Department from providing any response to the CEQA document. (*Id.* at p. 492.) It therefore prevented relevant information from being presented to the lead agency, which was prejudicial error because it precluded informed decision-making. (*Id.*)<sup>21</sup>

---

districts should be considered “state agencies” for purposes of the requirement to consult with “trustee agencies” as set forth in Public Resources Code § 20180.3(a). This Court has long ago held that the districts are not mere “local agencies” whose regulations are superseded by those of a state agency regarding matters of statewide concern, but rather have concurrent jurisdiction over such issues. (*Orange County Air Pollution Control District v. Public Util. Com.* (1971) 4 Cal.3d 945, 951, 954.) Since air pollution is a matter of statewide concern, *Id.* at 952, air districts should be entitled to trustee agency status in order to ensure that this vital concern is adequately protected during the CEQA process.

<sup>21</sup> In *Schenck*, the court concluded that failure to give notice to the air district was not prejudicial, but this was partly because the trial court had already corrected the error before the case arrived at the Court of Appeal. The trial court issued a writ of mandate requiring the lead agency to give notice to the air district. The air district responded by concurring with the lead agency that air impacts were not significant. (*Schenck*, 198 Cal.App.4th 949, 960.) We disagree with the *Schenck* court that the failure to give notice to the air district would not have been prejudicial (even in the absence of the trial court writ) merely because the lead agency purported to follow the air district’s published CEQA guidelines for significance. (*Id.*, 198 Cal.App.4th at p. 960.) In the first place, absent notice to the air district, it is uncertain whether the lead agency properly followed those guidelines. Moreover, it is not realistic to expect that an air district’s published guidelines would necessarily fully address all possible air-quality related issues that can arise with a CEQA project, or that those

Similarly, lead agencies must obtain additional information requested by expert agencies, including those with jurisdiction by law, if that information is necessary to determine a project's impacts. (*Sierra Club v. State Bd. Of Forestry* (1994) 7 Cal.4th 1215, 1236-37.) Approving a project without obtaining that information constitutes a failure to proceed in the manner prescribed by CEQA. (*Id.* at p. 1236.)

Moreover, a lead agency can save significant time and money by consulting with the air district early in the process. For example, the lead agency can learn what the air district recommends as an appropriate analysis on the facts of its case, including what kinds of health impacts analysis may be available, and what models are appropriate for use. This saves the lead agency from the need to do its analysis all over again and possibly needing to recirculate the document after errors are corrected, if new significant impacts are identified. (CEQA Guidelines § 15088.5(a).) At the same time, the air district's expert input can help the lead agency properly determine whether another commenter's request for additional analysis or studies is reasonable or feasible. Finally, the air district can provide input on what mitigation measures would be feasible and effective.

Therefore, we suggest that this Court provide guidance to lead agencies reminding them of the importance of consulting with the relevant air districts regarding these issues. Otherwise, their feasibility decisions may be vulnerable to air district evidence that establishes that there is no substantial evidence to support the lead agency decision not to provide specific analysis. (*See Berkeley Keep Jets Over the Bay, supra*, 91 Cal.App.4th 1344, 1369-1371.)

---

guidelines would necessarily be continually modified to reflect new developments. Therefore we believe that, had the trial court not already ordered the lead agency to obtain the air district's views, the failure to give notice would have been prejudicial, as in *Fall River, supra*, 70 Cal.App.4th 482, 492.

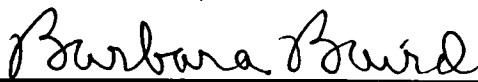

## CONCLUSION

The SCAQMD respectfully requests this Court *not* to establish a hard-and-fast rule concerning whether CEQA requires a lead agency to correlate identified air quality impacts of a project with resulting health outcomes. Moreover, the question of whether an EIR is “sufficient as an informational document” is a mixed question of fact and law containing two levels of inquiry. Whether a particular proposed analysis is feasible is predominantly a question of fact to be judged by the substantial evidence standard of review. Where the requested analysis is feasible, but the lead agency relies on legal or policy reasons not to provide it, the question of whether the EIR is nevertheless sufficient as an informational document is predominantly a question of law to be judged by the independent judgment standard of review.

Respectfully submitted,

Respectfully submitted,

  
Barbara Baird

**PROOF OF SERVICE**

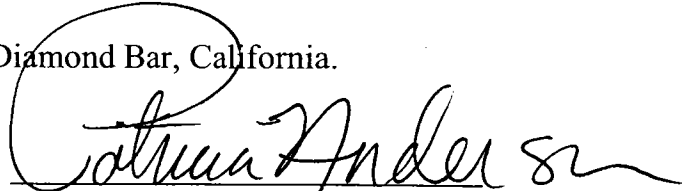

I am employed in the County of Los Angeles, California. I am over the age of 18 years and not a party to the within action. My business address is 21865 Copley Drive, Diamond Bar, California 91765.

On April 3, 2015 I served true copies of the following document(s) described as **APPLICATION OF THE SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT FOR LEAVE TO FILE BRIEF OF *AMICUS CURIAE* IN SUPPORT OF NEITHER PARTY AND [PROPOSED] BRIEF OF *AMICUS CURIAE*** by placing a true copy of the foregoing document(s) in a sealed envelope addressed as set forth on the attached service list as follows:

**BY MAIL:** I enclosed the document(s) in a sealed envelope or package addressed to the persons at the addresses listed in the Service List and placed the envelope for collection and mailing following our ordinary business practices. I am readily familiar with this District's practice for collection and processing of correspondence for mailing. Under that practice, the correspondence would be deposited with the United States Postal Service, with postage thereon fully prepaid at Diamond Bar, California, in the ordinary course of business. I am aware that on motion of the party served, service is presumed invalid if postal cancellation date or postage meter date is more than one day after date of deposit for mailing in affidavit.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed on April 3, 2015 at Diamond Bar, California.

  
Patricia Anderson

*Counsel for San Joaquin Valley Unified Air Pollution Control District*

## APPLICATION

Pursuant to California Rules of Court 8.520(f)(1), proposed Amicus Curiae San Joaquin Valley Unified Air Pollution Control District hereby requests permission from the Chief Justice to file an amicus brief in support of Defendant and Respondent, County of Fresno, and Defendant and Real Parties in Interest Friant Ranch, L.P. Pursuant to Rule 8.520(f)(5) of the California Rules of Court, the proposed amicus curiae brief is combined with this Application. The brief addresses the following issue certified by this Court for review:

Is an EIR adequate when it identifies the health impacts of air pollution and quantifies a project's expected emissions, or does CEQA further require the EIR to *correlate* a project's air quality emissions to specific health impacts?

As of the date of this filing, the deadline for the final reply brief on the merits was March 5, 2015. Accordingly, under Rule 8.520(f)(2), this application and brief are timely.

### **1. Background and Interest of San Joaquin Valley Unified Air Pollution Control District**

The San Joaquin Valley Unified Air Pollution Control District ("Air District") regulates air quality in the eight counties comprising the San Joaquin Valley ("Central Valley"): Kern, Tulare, Madera, Fresno, Merced, San Joaquin, Stanislaus, and Kings, and is primarily responsible for attaining air quality standards within its jurisdiction. After billions of dollars of investment by Central Valley businesses, pioneering air quality regulations, and consistent efforts by residents, the Central Valley air basin has made historic improvements in air quality.

The Central Valley's geographical, topographical and meteorological features create exceptionally challenging air quality

conditions. For example, it receives air pollution transported from the San Francisco Bay Area and northern Central Valley communities, and the southern portion of the Central Valley includes three mountain ranges (Sierra, Tehachapi, and Coastal) that, under some meteorological conditions, effectively trap air pollution. Central Valley air pollution is only a fraction of what the Bay Area and Los Angeles produce, but these natural conditions result in air quality conditions that are only marginally better than Los Angeles, even though about ten times more pollution is emitted in the Los Angeles region. Bay Area air quality is much better than the Central Valley's, even though the Bay Area produces about six times more pollution. The Central Valley also receives air pollution transported from the Bay Area and northern counties in the Central Valley, including Sacramento, and transboundary anthropogenic ozone from as far away as China.

Notwithstanding these challenges, the Central Valley has reduced emissions at the same or better rate than other areas in California and has achieved unparalleled milestones in protecting public health and the environment:

- In the last decade, the Central Valley became the first air basin classified by the federal government under the Clean Air Act as a “serious nonattainment” area to come into attainment of health-based National Ambient Air Quality Standard (“NAAQS”) for coarse particulate matter (PM10), an achievement made even more notable given the Valley’s extensive agricultural sector. Unhealthy levels of particulate matter can cause and exacerbate a range of chronic and acute illnesses.
- In 2013, the Central Valley became the first air basin in the country to improve from a federal designation of “extreme” nonattainment to

actually attain (and quality for an attainment designation) of the 1-hour ozone NAAQS; ozone creates “smog” and, like PM10, causes adverse health impacts.

- The Central Valley also is in full attainment of federal standards for lead, nitrogen dioxide, sulfur dioxide, and carbon monoxide.
- The Central Valley continues to make progress toward compliance with its last two attainment standards, with the number of exceedences for the 8-hour ozone NAAQS reduced by 74% (for the 1997 standard) and 38% (for the 2008 standard) since 1991, and for the small particulate matter (PM2.5) NAAQS reduced by 85% (for the 1997 standard) and 61% (for the 2006 standard).

Sustained improvement in Central Valley air quality requires a rigorous and comprehensive regulatory framework that includes prohibitions (e.g., on wood-burning fireplaces in new residences), mandates (e.g., requiring the installation of best available pollution reduction technologies on new and modified equipment and industrial operations), innovations (e.g., fees assessed against residential development to fund pollution reduction actions to “offset” vehicular emissions associated with new residences), incentive programs (e.g., funding replacements of older, more polluting heavy duty trucks and school buses)<sup>1</sup>, ongoing planning for continued air quality improvements, and enforcement of Air District permits and regulations.

The Air District is also an expert air quality agency for the eight counties and cities in the San Joaquin Valley. In that capacity, the Air District has developed air quality emission guidelines for use by the Central

---

<sup>1</sup> San Joaquin’s incentive program has been so successful that through 2012, it has awarded over \$ 432 million in incentive funds and has achieved 93,349 tons of lifetime emissions reductions. See SAN JOAQUIN VALLEY AIR POLLUTION CONTROL DISTRICT, 2012 PM2.5 PLAN, 6-6 (2012) available at <http://www.valleyair.org/Workshops/postings/2012/12-20-12PM25/FinalVersion/06%20Chapter%206%20Incentives.pdf>.

Valley counties and cities that implement the California Environment Quality Act (CEQA).<sup>2</sup> In its guidance, the Air District has distinguished between toxic air contaminants and criteria air pollutants.<sup>3</sup> Recognizing this distinction, the Air District's CEQA Guidance has adopted distinct thresholds of significance for *criteria* pollutants (i.e., ozone, PM2.5 and their respective precursor pollutants) based upon scientific and factual data which demonstrates the level that can be accommodated on a cumulative basis in the San Joaquin Valley without affecting the attainment of the applicable NAAQS.<sup>4</sup> For *toxic air* pollutants, the District has adopted different thresholds of significance which scientific and factual data demonstrates has the potential to expose sensitive receptors (i.e., children, the elderly) to levels which may result in localized health impacts.<sup>5</sup>

The Air District's CEQA Guidance was followed by the County of Fresno in its environment review of the Friant Ranch project, for which the Air District also served as a commenting agency. The Court of Appeal's holding, however, requiring correlation between the project's criteria

---

<sup>2</sup> See, e.g., SAN JOAQUIN VALLEY AIR POLLUTION CONTROL DISTRICT, PLANNING DIVISION, GUIDE FOR ASSESSING AND MITIGATING AIR QUALITY IMPACTS (2015), available at [http://www.valleyair.org/transportation/GAMAQI\\_3-19-15.pdf](http://www.valleyair.org/transportation/GAMAQI_3-19-15.pdf) ("CEQA Guidance").

<sup>3</sup> Toxic air contaminants, also known as hazardous air pollutants, are those pollutants that are known or suspected to cause cancer or other serious health effects, such as birth defects. There are currently 189 toxic air contaminants regulated by the United States Environmental Protection Agency ("EPA") and the states pursuant to the Clean Air Act. 42 U.S.C. § 7412. Common TACs include benzene, perchloroethylene and asbestos. *Id.* at 7412(b).

In contrast, there are only six (6) criteria air pollutants: ozone, particulate matter, carbon monoxide, nitrogen oxides, sulfur dioxide and lead. Although criteria air pollutants can also be harmful to human health, they are distinguishable from toxic air contaminants and are regulated separately. For instance, while criteria pollutants are regulated by numerous sections throughout Title I of the Clean Air Act, the regulation of toxic air contaminants occurs solely under section 112 of the Act. Compare 42 U.S.C. §§ 7407 – 7411 & 7501 – 7515 with 42 U.S.C. § 7411.

<sup>4</sup> See, e.g., CEQA Guidance at [http://www.valleyair.org/transportation/GAMAQI\\_3-19-15.pdf](http://www.valleyair.org/transportation/GAMAQI_3-19-15.pdf), pp. 64-66, 80.

<sup>5</sup> See, e.g., CEQA Guidance at [http://www.valleyair.org/transportation/GAMAQI\\_3-19-15.pdf](http://www.valleyair.org/transportation/GAMAQI_3-19-15.pdf), pp. 66, 99-101.

pollutants and local health impacts, departs from the Air District's Guidance and approved methodology for assessing criteria pollutants. A close reading of the administrative record that gave rise to this issue demonstrates that the Court's holding is based on a misunderstanding of the distinction between toxic air contaminants (for which a local health risk assessment is feasible and routinely performed) and criteria air pollutants (for which a local health risk assessment is not feasible and would result in speculative results).<sup>6</sup> The Air District has a direct interest in ensuring the lawfulness and consistent application of its CEQA Guidance, and will explain how the Court of Appeal departed from the Air District's long-standing CEQA Guidance in addressing criteria pollutants and toxic air contaminants in this amicus brief.

## **2. How the Proposed Amicus Curiae Brief Will Assist the Court**

As counsel for the proposed amicus curiae, we have reviewed the briefs filed in this action. In addition to serving as a "commentary agency" for CEQA purposes over the Friant Ranch project, the Air District has a strong interest in assuring that CEQA is used for its intended purpose, and believes that this Court would benefit from additional briefing explaining the distinction between criteria pollutants and toxic air contaminants and the different methodologies employed by local air pollution control agencies such as the Air District to analyze these two categories of air pollutants under CEQA. The Air District will also explain how the Court of Appeal's opinion is based upon a fundamental misunderstanding of these two different approaches by requiring the County of Fresno to correlate the project's *criteria* pollution emissions with *local* health impacts. In doing

---

<sup>6</sup> CEQA does not require speculation. *See, e.g., Laurel Heights Improvement Ass'n v. Regents of Univ. of Cal.*, 6 Cal. 4th 1112, 1137 (1993) (upholding EIR that failed to evaluate cumulative toxic air emission increases given absence of any acceptable means for doing so).

so, the Air District will provide helpful analysis to support its position that at least insofar as criteria pollutants are concerned, CEQA does not require an EIR to correlate a project's air quality emissions to specific health impacts, because such an analysis is not reasonably feasible.

**Rule 8.520 Disclosure**

Pursuant to Cal. R. 8.520(f)(4), neither the Plaintiffs nor the Defendant or Real Party In Interest or their respective counsel authored this brief in whole or in part. Neither the Plaintiffs nor the Defendant or Real Party in Interest or their respective counsel made any monetary contribution towards or in support of the preparation of this brief.

**CONCLUSION**

On behalf of the San Joaquin Valley Unified Air Pollution Control District, we respectfully request that this Court accept the filing of the attached brief.

Dated: April 2, 2015

## I. INTRODUCTION.

The San Joaquin Valley Unified Air Pollution Control District (“Air District”) respectfully submits that the Court of Appeal erred when it held that the air quality analysis contained in the Environmental Impact Report (“EIR”) for the Friant Ranch development project was inadequate under the California Environmental Quality Act (“CEQA”) because it did not include an analysis of the correlation between the project’s criteria air pollutants and the potential adverse human health impacts. A close reading of the portion of the administrative record that gave rise to this issue demonstrates that the Court’s holding is based on a misunderstanding of the distinction between toxic air contaminants and criteria air pollutants.

Toxic air contaminants, also known as hazardous air pollutants, are those pollutants that are known or suspected to cause cancer or other serious health effects, such as birth defects. There are currently 189 toxic air contaminants (hereinafter referred to as “TACs”) regulated by the United States Environmental Protection Agency (“EPA”) and the states pursuant to the Clean Air Act. 42 U.S.C. § 7412. Common TACs include benzene, perchloroethylene and asbestos. *Id.* at 7412(b).

In contrast, there are only six (6) criteria air pollutants: ozone, particulate matter, carbon monoxide, nitrogen oxides, sulfur dioxide and lead. Although criteria air pollutants can also be harmful to human health,

they are distinguishable from TACs and are regulated separately. For instance, while criteria pollutants are regulated by numerous sections throughout Title I of the Clean Air Act, the regulation of TACs occurs solely under section 112 of the Act. *Compare* 42 U.S.C. §§ 7407 – 7411 & 7501 – 7515 *with* 42 U.S.C. § 7411.

The most relevant difference between criteria pollutants and TACs for purposes of this case is the manner in which human health impacts are accounted for. While it is common practice to analyze the correlation between an individual facility's TAC emissions and the expected localized human health impacts, such is not the case for criteria pollutants. Instead, the human health impacts associated with criteria air pollutants are analyzed and taken into consideration when EPA sets the national ambient air quality standard ("NAAQS") for each criteria pollutant. 42 U.S.C. § 7409(b)(1). The health impact of a particular criteria pollutant is analyzed on a regional and not a facility level based on how close the area is to complying with (attaining) the NAAQS. Accordingly, while the type of individual facility / health impact analysis that the Court of Appeal has required is a customary practice for TACs, it is not feasible to conduct a similar analysis for criteria air pollutants because currently available computer modeling tools are not equipped for this task.

It is clear from a reading of both the administrative record and the Court of Appeal's decision that the Court did not have the expertise to fully

appreciate the difference between TACs and criteria air pollutants. As a result, the Court has ordered the County of Fresno to conduct an analysis that is not practicable and not likely yield valid information. The Air District respectfully requests that this portion of the Court of Appeal's decision be reversed.

**II. THE COURT OF APPEAL ERRED IN FINDING THE FRIANT RANCH EIR INADEQUATE FOR FAILING TO ANALYZE THE SPECIFIC HUMAN HEALTH IMPACTS ASSOCIATED CRITERIA AIR POLLUTANTS.**

Although the Air District does not take lightly the amount of air emissions at issue in this case, it submits that the Court of Appeal got it wrong when it required Fresno County to revise the Friant Ranch EIR to include an analysis correlating the criteria air pollutant emissions associated with the project with specific, localized health-impacts. The type of analysis the Court of Appeal has required will not yield reliable information because currently available modeling tools are not well suited for this task. Further, in reviewing this issue de novo, the Court of Appeal failed to appreciate that it lacked the scientific expertise to appreciate the significant differences between a health risk assessment commonly performed for toxic air contaminants and a similar type of analysis it felt should have been conducted for criteria air pollutants.

///

///

**A. Currently Available Modeling Tools are not Equipped to Provide a Meaningful Analysis of the Correlation between an Individual Development Project's Air Emissions and Specific Human Health Impacts.**

In order to appreciate the problematic nature of the Court of Appeals' decision requiring a health risk type analysis for criteria air pollutants, it is important to understand how the relevant criteria pollutants (ozone and particulate matter) are formed, dispersed and regulated.

Ground level ozone (smog) is not directly emitted into the air, but is formed when precursor pollutants such as oxides of nitrogen (NO<sub>x</sub>) and volatile organic compounds (VOCs) are emitted into the atmosphere and undergo complex chemical reactions in the process of sunlight.<sup>1</sup> Once formed, ozone can be transported long distances by wind.<sup>2</sup> Because of the complexity of ozone formation, a specific tonnage amount of NO<sub>x</sub> or VOCs emitted in a particular area does not equate to a particular concentration of ozone in that area. In fact, even rural areas that have relatively low tonnages of emissions of NO<sub>x</sub> or VOCs can have high levels of ozone concentration simply due to wind transport.<sup>3</sup> Conversely, the San Francisco Bay Area has six times more NO<sub>x</sub> and VOC emissions per square mile than the San Joaquin Valley, but experiences lower

---

<sup>1</sup> See United States Environmental Protection Agency, *Ground-level Ozone: Basic Information*, available at: <http://www.epa.gov/airquality/ozonepollution/basic.html> (visited March 10, 2015).

<sup>2</sup> *Id.*

<sup>3</sup> *Id.*

concentrations of ozone (and better air quality) simply because sea breezes disperse the emissions.<sup>4</sup>

Particulate matter (“PM”) can be divided into two categories: directly emitted PM and secondary PM.<sup>5</sup> While directly emitted PM can have a localized impact, the tonnage emitted does not always equate to the local PM concentration because it can be transported long distances by wind.<sup>6</sup> Secondary PM, like ozone, is formed via complex chemical reactions in the atmosphere between precursor chemicals such as sulfur dioxides (SO<sub>x</sub>) and NO<sub>x</sub>.<sup>7</sup> Because of the complexity of secondary PM formation, the tonnage of PM-forming precursor emissions in an area does not necessarily result in an equivalent concentration of secondary PM in that area.

The disconnect between the *tonnage* of precursor pollutants (NO<sub>x</sub>, SO<sub>x</sub> and VOCs) and the *concentration* of ozone or PM formed is important because it is not necessarily the tonnage of precursor pollutants that causes human health effects, but the concentration of resulting ozone or PM. Indeed, the national ambient air quality standards (“NAAQS”), which are statutorily required to be set by the United States Environmental Protection

<sup>5</sup> United States Environmental Protection Agency, *Particulate Matter: Basic Information*, available at: <http://www.epa.gov/airquality/particlepollution/basic.html> (visited March 10, 2015).

<sup>6</sup> *Id.*

<sup>7</sup> *Id.*

Agency (“EPA”) at levels that are “requisite to protect the public health,” 42 U.S.C. § 7409(b)(1), are established as concentrations of ozone or particulate matter and not as tonnages of their precursor pollutants.<sup>8</sup>

Attainment of a particular NAAQS occurs when the concentration of the relevant pollutant remains below a set threshold on a consistent basis throughout a particular region. For example, the San Joaquin Valley attained the 1-hour ozone NAAQS when ozone concentrations remained at or below 0.124 parts per million Valley-wide on 3 or fewer days over a 3-year period.<sup>9</sup> Because the NAAQS are focused on achieving a particular concentration of pollution region-wide, the Air District’s tools and plans for attaining the NAAQS are regional in nature.

For instance, the computer models used to simulate and predict an attainment date for the ozone or particulate matter NAAQS in the San Joaquin Valley are based on regional inputs, such as regional inventories of precursor pollutants (NO<sub>x</sub>, SO<sub>x</sub> and VOCs) and the atmospheric chemistry and meteorology of the Valley.<sup>10</sup> At a very basic level, the models simulate future ozone or PM levels based on predicted changes in precursor

---

<sup>9</sup> *San Joaquin Valley Unified Air Pollution Control District 2013 Plan for the Revoked 1-Hour Ozone Standard*, Ch. 2 p. 2-16, available at: [http://www.valleyair.org/Air\\_Quality\\_Plans/OzoneOneHourPlan2013/02Chapter2ScienceTrendsModeling.pdf](http://www.valleyair.org/Air_Quality_Plans/OzoneOneHourPlan2013/02Chapter2ScienceTrendsModeling.pdf) (visited March 10, 2015).

<sup>10</sup> *Id.* at Ch. 2 p. 2-19 (visited March 12, 2015); *San Joaquin Valley Unified Air Pollution Control District 2008 PM<sub>2.5</sub> Plan*, Appendix F, pp. F-2 – F-5, available at: [http://www.valleyair.org/Air\\_Quality\\_Plans/docs/AQ\\_Final\\_Adopted\\_PM2.5/20%20Appendix%20F.pdf](http://www.valleyair.org/Air_Quality_Plans/docs/AQ_Final_Adopted_PM2.5/20%20Appendix%20F.pdf) (visited March 19, 2015).

emissions Valley wide.<sup>11</sup> Because the NAAQS are set levels necessary to protect human health, the closer a region is to attaining a particular NAAQS, the lower the human health impact is from that pollutant.

The goal of these modeling exercises is not to determine whether the emissions generated by a particular factory or development project will affect the date that the Valley attains the NAAQS. Rather, the Air District's modeling and planning strategy is regional in nature and based on the extent to which *all* of the emission-generating sources in the Valley (current and future) must be controlled in order to reach attainment.<sup>12</sup>

Accordingly, the Air District has based its thresholds of significance for CEQA purposes on the levels that scientific and factual data demonstrate that the Valley can accommodate without affecting the attainment date for the NAAQS.<sup>13</sup> The Air District has tied its CEQA significance thresholds to the level at which stationary pollution sources permitted by the Air District must "offset" their emissions.<sup>14</sup> This "offset"

---

<sup>11</sup> *Id.*

<sup>12</sup> Although the Air District does have a dispersion modeling tool used during its air permitting process that is used to predict whether a particular project's directly emitted PM will either cause an exceedance of the PM NAAQS or contribute to an existing exceedance, this model bases the prediction on a worst case scenario of emissions and meteorology and has no provision for predicting any associated human health impacts. Further, this analysis is only performed for stationary sources (factories, oil refineries, etc.) that are required to obtain a New Source Review permit from the Air District and not for development projects such as Friant Ranch over which the Air District has no preconstruction permitting authority. See San Joaquin Valley Unified Air Pollution Control District Rule 2201 §§ 2.0; 3.3.9; 4.14.1, available at: <http://www.valleyair.org/rules/currntrules/Rule22010411.pdf> (visited March 19, 2015).

<sup>14</sup> *Id.* at pp. 22, 25.

level allows for growth while keeping the cumulative effects of all new sources at a level that will not impede attainment of the NAAQS.<sup>15</sup> In the Valley, these thresholds are 15 tons per year of PM, and 10 tons of NOx or VOC per year. *Sierra Club, supra*, 172 Cal.Rptr.3d at 303; AR 4554. Thus, the CEQA air quality analysis for criteria pollutants is not really a localized, project-level impact analysis but one of regional, “cumulative impacts.”

Accordingly, the significance thresholds applied in the Friant Ranch EIR (15 tons per year of PM and 10 tons of NOx or VOCs) are not intended to be indicative of any localized human health impact that the project may have. While the health effects of air pollution are of primary concern to the Air District (indeed, the NAAQS are established to protect human health), the Air District is simply not equipped to analyze whether and to what extent the criteria pollutant emissions of an individual CEQA project directly impact human health in a particular area. This is true even for projects with relatively high levels of emissions of criteria pollutant precursor emissions.

For instance, according to the EIR, the Friant Ranch project is estimated to emit 109.52 tons per year of ROG (VOC), 102.19 tons per year of NOx, and 117.38 tons per year of PM. Although these levels well

---

<sup>15</sup> *San Joaquin Valley Unified Air Pollution Control District Environmental Review Guidelines* (Aug. 2000) p. 4-11, available at: [http://www.valleyair.org/transportation/CEQA%20Rules/ERG%20Adopted%20August%202000\\_.pdf](http://www.valleyair.org/transportation/CEQA%20Rules/ERG%20Adopted%20August%202000_.pdf) (visited March 12, 2015).

exceed the Air District's CEQA significance thresholds, this does not mean that one can easily determine the concentration of ozone or PM that will be created at or near the Friant Ranch site on a particular day or month of the year, or what specific health impacts will occur. Meteorology, the presence of sunlight, and other complex chemical factors all combine to determine the ultimate concentration and location of ozone or PM. This is especially true for a project like Friant Ranch where most of the criteria pollutant emissions derive not from a single "point source," but from area wide sources (consumer products, paint, etc.) or mobile sources (cars and trucks) driving to, from and around the site.

In addition, it would be extremely difficult to model the impact on NAAQS attainment that the emissions from the Friant Ranch project may have. As discussed above, the currently available modeling tools are equipped to model the impact of *all* emission sources in the Valley on attainment. According to the most recent EPA-approved emission inventory, the NO<sub>x</sub> inventory for the Valley is for the year 2014 is 458.2 tons per day, or 167,243 tons per year and the VOC (or ROG) inventory is 361.7 tons per day, or 132,020.5 tons per year.<sup>16</sup> Running the photochemical grid model used for predicting ozone attainment with the

---

<sup>16</sup> *San Joaquin Valley Unified Air Pollution Control District 2007 Ozone Plan*, Appendix B pp. B-6, B-9, available at: [http://www.valleyair.org/Air\\_Quality\\_Plans/docs/AO\\_Ozone\\_2007\\_Adopted/19%20Appendix%20B%20April%202007.pdf](http://www.valleyair.org/Air_Quality_Plans/docs/AO_Ozone_2007_Adopted/19%20Appendix%20B%20April%202007.pdf) (visited March 12, 2015).

emissions solely from the Friant Ranch project (which equate to less than one-tenth of one percent of the total NOx and VOC in the Valley) is not likely to yield valid information given the relative scale involved.

Finally, even once a model is developed to accurately ascertain local increases in concentrations of photochemical pollutants like ozone and some particulates, it remains impossible, using today's models, to correlate that increase in concentration to a specific health impact. The reason is the same: such models are designed to determine regional, population-wide health impacts, and simply are not accurate when applied at the local level.

For these reasons, it is not the norm for CEQA practitioners, including the Air District, to conduct an analysis of the localized health impacts associated with a project's criteria air pollutant emissions as part of the EIR process. When the accepted scientific method precludes a certain type of analysis, "the court cannot impose a legal standard to the contrary." *Kings County Farm Bureau v. City of Hanford* (1990) 221 Cal.App.3d 692, 717 n. 8. However, that is exactly what the Court of Appeal has done in this case. Its decision upends the way CEQA air quality analysis of criteria pollutants occurs and should be reversed.

///

///

///

**B. The Court of Appeal Improperly Extrapolated a Request for a Health Risk Assessment for Toxic Air Contaminants into a Requirement that the EIR contain an Analysis of Localized Health Impacts Associated with Criteria Air Pollutants.**

The Court of Appeal's error in requiring the new health impact analysis for criteria air pollutants clearly stems from a misunderstanding of terms of art commonly used in the air pollution field. More specifically, the Court of Appeal (and Appellants Sierra Club et al.) appear to have confused the health risk analysis ("HRA") performed to determine the health impacts associated with a project's toxic air contaminants ("TACs"), with an analysis correlating a project's criteria air pollutants (ozone, PM and the like) with specific localized health impacts.

The first type of analysis, the HRA, is commonly performed during the Air District's stationary source permitting process for projects that emit TACs and is, thus, incorporated into the CEQA review process. An HRA is a comprehensive analysis to evaluate and predict the dispersion of TACs emitted by a project and the potential for exposure of human populations. It also assesses and quantifies both the individual and population-wide health risks associated with those levels of exposure. There is no similar analysis conducted for criteria air pollutants. Thus, the second type of analysis (required by the Court of Appeal), is not currently part of the Air District's process because, as outlined above, the health risks associated

with exposure to criteria pollutants are evaluated on a regional level based on the region's attainment of the NAAQS.

The root of this confusion between the types of analyses conducted for TACs versus criteria air pollutants appears to stem from a comment that was presented to Fresno County by the City of Fresno during the administrative process.

In its comments on the draft EIR, the City of Fresno (the only party to raise this issue) stated:

[t]he EIR must disclose the human health related effects of the Project's air pollution impacts. (CEQA Guidelines section 15126.2(a).) The EIR fails completely in this area. The EIR should be revised to disclose and determine the significance of TAC impacts, and of human health risks due to exposure to Project-related air emissions.

(AR 4602.)

In determining that the issue regarding the correlation between the Friant Ranch project's criteria air pollutants and adverse health impacts was adequately exhausted at the administrative level, the Court of Appeal improperly read the first two sentences of the City of Fresno's comment in isolation rather than in the context of the entire comment. *See Sierra Club v. County of Fresno* (2014) 172 Cal.Rptr.3d 271, 306. Although the comment first speaks generally in terms of "human health related effects" and "air pollution," it requests only that the EIR be revised to disclose "the significance of TACs" and the "human health risks due to exposure."

The language of this request in the third sentence of the comment is significant because, to an air pollution practitioner, the language would only have indicated only that a HRA for TACs was requested, and not a separate analysis of the health impacts associated with the project's criteria air pollutants. Fresno County clearly read the comment as a request to perform an HRA for TACs and limited its response accordingly. (AR 4602.)<sup>17</sup> The Air District submits that it would have read the City's comment in the same manner as the County because the City's use of the terms "human health risks" and "TACs" signal that an HRA for TACs is being requested. Indeed, the Air District was also concerned that an HRA be conducted, but understood that it was not possible to conduct such an analysis until the project entered the phase where detailed site specific information, such as the types of emission sources and the proximity of the sources to sensitive receptors became available. (AR 4553.)<sup>18</sup> The City of Fresno was apparently satisfied with the County's discussion of human health risks, as it did not raise the issue again when it commented on the final EIR. (AR 8944 – 8960.)

---

<sup>17</sup> Appellants do not challenge the manner in which the County addressed TACs in the EIR. (Appellants' Answer Brief p. 28 fn. 7.)

<sup>18</sup> Appellants rely on the testimony of Air District employee, Dan Barber, as support for their position that the County should have conducted an analysis correlating the project's criteria air pollutant emissions with localized health impacts. (Appellants Answer Brief pp. 10-11; 28.) However, Mr. Barber's testimony simply reinforces the Air District's concern that a risk assessment (HRA) be conducted once the actual details of the project become available. (AR 8863.) As to criteria air pollutants, Mr. Barber's comments are aimed at the Air District's concern about the amount of emissions and the fact that the emissions will make it "more difficult for Fresno County and the Valley to reach attainment which means that the health of Valley residents maybe [sic] adversely impacted." Mr. Barber says nothing about conducting a separate analysis of the localized health impacts the project's emissions may have.

The Court of Appeal's holding, which incorrectly extrapolates a request for an HRA for TACs into a new analysis of the localized health impacts of the project's criteria air pollutants, highlights two additional errors in the Court's decision.

First, the Court of Appeal's holding illustrates why the Court should have applied the deferential substantial evidence standard of review to the issue of whether the EIR's air quality analysis was sufficient. The regulation of air pollution is a technical and complex field and the Court of Appeal lacked the expertise to fully appreciate the difference between TACs and criteria air pollutants and tools available for analyzing each type of pollutant.

Second, it illustrates that the Court likely got it wrong when it held that the issue regarding the criteria pollutant / localized health impact analysis was properly exhausted during the administrative process. In order to preserve an issue for the court, '[t]he "exact issue" must have been presented to the administrative agency....' [Citation.] *Citizens for Responsible Equitable Environmental Development v. City of San Diego*, (2011) 196 Cal.App.4th 515, 527 129 Cal.Rptr.3d 512, 521; *Sierra Club v. City of Orange* (2008) 163 Cal.App.4th 523, 535, 78 Cal.Rptr.3d 1, 13. "[T]he objections must be sufficiently specific so that the agency has the

opportunity to evaluate and respond to them.’ [Citation.]” *Sierra Club v. City of Orange*, 163 Cal.App.4<sup>th</sup> at 536.<sup>19</sup>

As discussed above, the City’s comment, while specific enough to request a commonly performed HRA for TACs, provided the County with no notice that it should perform a new type of analysis correlating criteria pollutant tonnages to specific human health effects. Although the parties have not directly addressed the issue of failure to exhaust administrative remedies in their briefs, the Air District submits that the Court should consider how it affects the issues briefed by the parties since “[e]xhaustion of administrative remedies is a jurisdictional prerequisite to maintenance of a CEQA action.” *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4<sup>th</sup> 1184, 1199, 22 Cal.Rptr.3d 203.

### III. CONCLUSION

For all of the foregoing reasons, the Air District respectfully requests that the portion of the Court of Appeal’s decision requiring an analysis correlating the localized human health impacts associated with an individual project’s criteria air pollutant emissions be reversed.

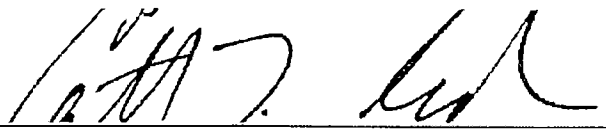

---

<sup>19</sup> *Sierra Club v. City of Orange*, is illustrative here. In that case, the plaintiffs challenged an EIR approved for a large planned community on the basis that the EIR improperly broke up the various environmental impacts by separate project components or “piecemealed” the analysis in violation of CEQA. In evaluating the defense that the plaintiffs had failed to adequately raise the issue at the administrative level, the Court held that comments such as “*the use of a single document for both a project-level and a program-level EIR [is] ‘confusing’*,” and “[t]he lead agency should identify any potential adverse air quality impacts that could occur from all phases of the project and all air pollutant sources related to the project,” were too vague to fairly raise the argument of piecemealing before the agency. *Sierra Club v. City of Orange*, 163 Cal.App.4<sup>th</sup> at 537.

correlating the localized human health impacts associated with an individual project's criteria air pollutant emissions be reversed.

Respectfully submitted,

Dated: April 2, 2015

# Executive Summary

---

Rincon Consultants, Inc. (Rincon) was retained by California State University, Fullerton (CSUF) to conduct an archaeological resources study for the proposed CSUF Master Plan Update Project (project) in the City of Fullerton, Orange County, California. This archaeological resources study included a cultural resources records search, Native American outreach, pedestrian field survey of the project site, and preparation of this technical report. An analysis of the historic-era built-environment resources for the project is provided in an accompanying, separate report. This study has been completed in accordance with the requirements of the California Environmental Quality Act (CEQA).

Based on the results of the study, no archaeological resources (prehistoric or historic) were identified within the project site. Therefore, Rincon recommends a finding of ***less than significant impact to archaeological resources with mitigation*** for the purposes of CEQA. Rincon recommends that a mitigation measure for the unanticipated discovery of archaeological resources be added to the CSUF Master Plan Update. The project is also required to adhere to regulations regarding the unanticipated discovery of human remains, detailed below.

## Unanticipated Discovery of Cultural Resources

If cultural resources are encountered during ground-disturbing activities, work in the immediate area must halt and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (National Park Service 1983) should be contacted immediately to evaluate the find. If the discovery proves to be significant under CEQA, additional work such as data recovery excavation and Native American consultation may be warranted to mitigate any significant impacts.

## Unanticipated Discovery of Human Remains

The discovery of human remains is always a possibility during ground disturbing activities. If human remains are found, the State of California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. In the event of an unanticipated discovery of human remains, the County coroner must be notified immediately. If the human remains are determined to be prehistoric, the coroner will notify the Native American Heritage Commission (NAHC), which will determine and notify a most likely descendant (MLD). The MLD has 48 hours from being granted site access to make recommendations for the disposition of the remains. If the MLD does not make recommendations within 48 hours, the landowner shall reinter the remains in an area of the property secure from subsequent disturbance.

# 1 Introduction

---

Rincon Consultants, Inc. (Rincon) was retained by California State University, Fullerton (CSUF) to conduct an archaeological resources study for the proposed CSUF Master Plan Update Project (project) in the City of Fullerton, Orange County, California. This study included a California Historical Resources Information Center (CHRIS) records search, Native American outreach, pedestrian field survey, and preparation of this technical report. An analysis of the historic-era built-environment resources for the project is provided in an accompanying, separate report. This study has been completed in accordance with the requirements of the California Environmental Quality Act (CEQA).

## 1.1 Project Location

The project site is the campus of CSUF, which is located at 800 North State College Boulevard in the City of Fullerton, Orange County (Figure 1). The campus is bordered by Yorba Linda Boulevard on the north, Chapman Avenue on the south, State College Boulevard on the west, and State Route 57 (SR 57), the Orange Freeway, on the east. Lying approximately 6.5 miles east of Fullerton Creek, the project site is depicted on Township 03S, Range 10W, Sections 24-25 of the United States Geological Survey (USGS) La Habra CA 7.5-minute quadrangle (Figure 2). The project site encompasses approximately 240 acres.

## 1.2 Project Description

The proposed CSUF Educational and Facilities Master Plan Update, also referred to as the Campus Master Plan (CMP), is an update of the CSUF Master Development Plan (MDP). The CMP serves as a guide for the future development of the CSUF campus and strategy for modifying the physical campus of CSUF to accommodate expected growth through the year 2039. The CMP presents an overall picture of the future of the CSUF campus and includes recommendations for land use, new construction, enhancement and replacement of existing facilities, mobility networks, and sustainable practices. The project will include addition of new, and replacement of old, academic buildings and housing. The design of these new facilities will provide increased informal learning spaces, distributed throughout existing, new, and exterior spaces. These will be complimented with improved dining and campus living amenities to increase the ability for students to remain on campus before, between, and after classes.

## 1.3 Personnel

Rincon Architectural Historian Alexandra Madsen, MA, completed the cultural resources records search for this archaeological resources study. Rincon Archaeologist Tricia Dodds, MA, Registered Professional Archaeologist (RPA), conducted the pedestrian field survey. Rincon Archaeologist Mark Strother, MA, undertook the Native American outreach and is the primary author of this report. Rincon Senior Archaeologist Tiffany Clark, PhD, RPA, provided management oversight for this study and is a contributing author of this report. Ms. Clark meets the Secretary of the Interior's Professional Qualifications Standards for prehistoric and historic archaeology (National Park Service

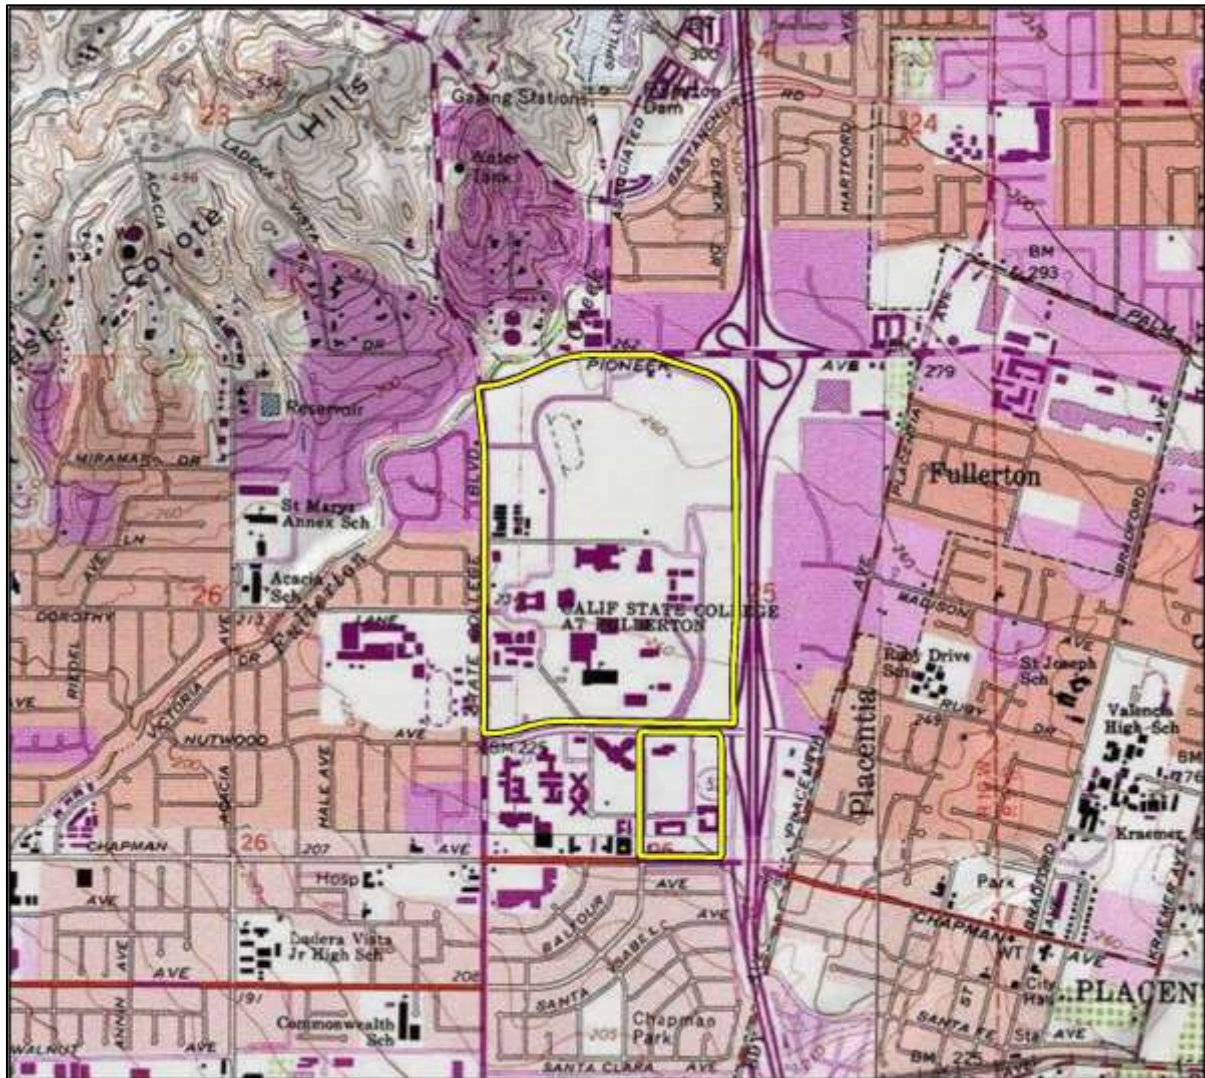

## Introduction

1983). Rincon Geographic Information Systems (GIS) Analyst Allysen Valencia prepared the figures for this report. Rincon Principal Christopher Duran, M.A., RPA reviewed this report for quality control.

## 2 Regulatory Setting

---

### 2.1 California Environmental Quality Act

CEQA requires a lead agency to determine whether a project may have a significant effect on historical resources (Public Resources Code [PRC], Section 21084.1) or tribal cultural resources (PRC Section 21074[a] [1] [A]-[B]). A historical resource is a resource listed, or determined to be eligible for listing in the California Register of Historical Resources (CRHR); a resource included in a local register of historical resources; or an object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant (State CEQA Guidelines, Section 15064.5[a] [1-3]).

A resource shall be considered historically significant if it meets any of the following criteria:

1. Is associated with events which made a significant contribution to the broad patterns of California's history and cultural heritage
2. Is associated with the lives of persons important to our past
3. Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values
4. Has yielded, or may be likely to yield, information important in prehistory or history

Generally, a cultural resource must be at least 50 years of age to be considered for listing on the CRHR. Resources having achieved significance within the past 50 years may also be eligible for inclusion in the CRHR, provided enough time has lapsed to obtain a scholarly perspective on the events or individuals associated with the resource (Office of Historic Preservation n.d.:3).

In addition, if it can be demonstrated a project would cause damage to a *unique archaeological resource*, the lead agency may require reasonable efforts be made to permit any or all of these resources to be preserved in place or left in an undisturbed state. To the extent resources cannot be left undisturbed, mitigation measures are required (PRC Section 21083.2[a], [b]).

PRC Section 21083.2(g) defines a *unique archaeological resource* as an artifact, object, or site about which it can be clearly demonstrated, without merely adding to the current body of knowledge, there is a high probability it meets any of the following criteria:

1. Contains information needed to answer important scientific research questions and there is a demonstrable public interest in such information
2. Has a special and particular quality such as being the oldest of its type or the best available example of its type
3. Is directly associated with a scientifically recognized important prehistoric or historic event or person

## 2.2 Assembly Bill 52

As of July 1, 2015, California Assembly Bill 52 (AB 52) was enacted and expands CEQA by defining a new resource category called tribal cultural resources (TCRs). AB 52 establishes “a project with an effect that may cause a substantial adverse change in the significance of a TCR is a project that may have a significant effect on the environment” (PRC Section 21084.2). It further states the lead agency shall establish measures to avoid impacts which would alter the significant characteristics of a TCR, when feasible (PRC Section 21084.3).

PRC Section 21074(a)(1)(A) and (B) defines TCRs as “sites, features, places, cultural landscapes, sacred places, and objects with cultural value to a California Native American tribe” and meets either of the following criteria:

1. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources, as defined in PRC Section 5020.1(k)
2. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC 5024.1.

In applying these criteria, the lead agency shall consider the significance of the resource to a California Native American tribe. AB 52 also establishes a formal consultation process for California tribes regarding TCRs. The consultation process must be completed before a CEQA document can be certified. Under AB 52, lead agencies are required to “begin consultation with a California Native American tribe that is traditionally and culturally affiliated with the geographic area of the proposed project.” Native American tribes to be included in the process are those having requested notice of projects proposed within the jurisdiction of the lead agency.

## 3 Cultural Setting

---

The cultural setting for the project is presented broadly in three overviews: Prehistoric, Ethnographic, and Historic. The prehistoric and historic overviews describe human occupation before and after European contact, while the ethnographic overview provides a brief summary of traditional Native American culture.

### 3.1.1 Prehistoric Overview (ca. 9600 – 5600 BCE)

The project site lies in what generally is described as California's Southern Bight (Byrd and Raab 2007). This region extends from the Mexican border to Santa Monica and includes Orange and San Diego counties, western Riverside County, and the Southern Channel Islands. For the purposes of this study, the prehistoric cultural chronology for the Southern Bight is presented following Byrd and Raab (2007), who have divided the chronology into the Early (9600- 5600 BCE), Middle (5600-1650 BCE), and Late (1650 BCE- 1769 CE) Holocene.

### 3.1.2 Early Holocene (ca. 9600 – 5600 BCE)

Evidence of Paleo-Indian occupation of southern California remains very limited. Approximately 75 sites on the southern and central California coast are known that date to 7,500 years before present (B.P.; Erlandson 1991). The earliest accepted dates for human occupation of the California coast are from the Northern Channel Islands, off the Santa Barbara coast. Daisy Cave, located on San Miguel Island, dates to as early as 9,600 BCE. At the Arlington Springs site on Santa Rosa Island human remains yielded a date of approximately 10,000 BCE (Johnson et al. 2002). San Diego and Orange counties and the Southern Channel Islands have not produced dates as early as these. However, radiocarbon evidence has dated early occupation of the coastal region between circa (ca.) 8,000 and 7,000 BCE (Byrd and Raab 2007).

Traditional models describe California's first inhabitants as big-game hunters roaming North America during the end of the last Ice Age. As the Ice Age came to a close, warmer and drier climatic conditions are thought to have created wide-spread cultural responses. The pluvial lakes and streams in the desert interior began to wane and cultures dependent on these water sources migrated to areas with moister conditions, such as the southern California coast (Byrd and Raab 2007).

### 3.1.3 Middle Holocene (ca. 5600 –1650 BCE)

The Middle Holocene is generally viewed as a time of cultural transition. During this time, the cultural adaptations of the Early Holocene gradually altered. Use of milling stone tools began to appear across most of central and southern California around 6,000-5,000 BCE, indicating a focus on the collection and processing of hard-shelled seeds. Environmental changes in the Southern Bight are thought to have been the key factor in these changing adaptations (Byrd and Raab 2007). Occupation patterns indicated semi-sedentary populations focused on the bays and estuaries of San Diego and Orange counties, with shellfish and plant resources as the most important dietary

components (Warren 1968). In the San Diego area, this adaptive strategy is known as the La Jolla complex.

Sometime around 4,000 years ago, extensive estuarine silting began to cause a decline in shellfish and thus a depopulation of the coastal zone. Settlement shifted to river valleys, and resource exploitation focused on hunting small game and gathering plant resources (Warren 1968; Byrd and Raab 2007).

### 3.1.4 Late Holocene (ca. 1650 BCE – 1769 CE)

The Late Holocene witnessed numerous cultural adaptations. The bow and arrow was adopted sometime after 500 CE, and ceramics appeared in the area ca. 1000 CE. Populations were sustained by food surpluses, especially acorns (Byrd and Raab 2007; Kroeber 1925). Other exploited food resources include shellfish, fish, small terrestrial mammals, and small-seeded plants. Settlement patterns of the Late Holocene are characterized by large residential camps linked to smaller specialized camps for resource procurement (Byrd and Raab 2007).

## 3.2 Ethnographic Overview

The project site is located within the traditional territory of the Native American group known as the Gabrielino. The name Gabrielino was applied by the Spanish to those natives that were attached to Mission San Gabriel (Bean and Smith 1978:538). Today, most contemporary Gabrielino prefer to identify themselves as Tongva, a term that will be used throughout the remainder of this section.

Tongva territory included the Los Angeles basin and southern Channel Islands as well as the coast from Aliso Creek in the south to Topanga Creek in the north. Their territory encompassed several biotic zones, including Coastal Marsh, Coastal Strand, Prairie, Chaparral, Oak Woodland, and Pine Forest (Bean and Smith 1978).

The Tongva language belongs to the Takic branch of the Uto-Aztecan language family, which can be traced to the Great Basin region (Mithun 2004). This language family includes dialects spoken by the nearby Juaneño and Luiseño, but is considerably different from those of the Chumash people living to the north and the Diegueño (including Ipai, Tipai, and Kumeyaay) people living to the south.

Tongva society was organized along patrilineal non-localized clans, a common Takic pattern. Each clan had a ceremonial leader and contained several lineages. The Tongva established large permanent villages and smaller satellite camps throughout their territory. Recent ethnohistoric work (O'Neil 2002) suggests a total tribal population of nearly 10,000, considerably more than earlier estimates of around 5,000 people (Bean and Smith 1978:540).

Tongva subsistence was oriented around acorns supplemented by the roots, leaves, seeds, and fruits of a wide variety of plants. Meat sources included large and small mammals, freshwater and saltwater fish, shellfish, birds, reptiles, and insects. (Bean and Smith 1978; Kroeber 1925; McCawley 1996). The Tongva employed a wide variety of tools and implements to gather and hunt food. The digging stick, used to extract roots and tubers, was frequently noted by early European explorers (Rawls 1984). Other tools included the bow and arrow, traps, nets, blinds, throwing sticks and slings, spears, harpoons, and hooks. Like the Chumash, the Tongva made oceangoing plank canoes (known as a *ti'at*) capable of holding six to 14 people and used for fishing, travel, and trade between the mainland and the Channel Islands. Tule reed canoes were employed for near-shore fishing (Blackburn 1963; McCawley 1996:117-127).

Chinigchinich, the last in a series of heroic mythological figures, was central to Tongva religious life at the time of Spanish contact (Kroeber 1925:637–638). The belief in Chinigchinich was spreading south among other Takic-speaking groups at the same time the Spanish were establishing Christian missions. Elements of Chinigchinich beliefs suggest it was a syncretic mixture of Christianity and native religious practices (McCawley 1996:143-144).

Prior to European contact, deceased Tongva were either buried or cremated, with burial more common on the Channel Islands and the adjacent mainland coast and cremation on the remainder of the coast and in the interior (McCawley 1996:157). After pressure from Spanish missionaries, cremation essentially ceased during the post-contact period (McCawley 1996:157).

### 3.3 Historic Overview

The post-Contact history of California is generally divided into three periods: the Spanish period (1769–1822), the Mexican period (1822–1848), and the American period (1848–present). These historical periods are described below.

#### 3.3.1 Spanish Period (1769–1822)

Spanish exploration of California began when Juan Rodriguez Cabrillo led the first European expedition into the region in 1542. For more than 200 years after his initial expedition, Spanish, Portuguese, British, and Russian explorers sailed the California coast and made limited inland expeditions, but they did not establish permanent settlements (Bean 1968; Rolle 2003). In 1769, Gaspar de Portolá and Franciscan Father Junípero Serra established the first Spanish settlement in what was then known as Alta (upper) California at Mission San Diego de Alcalá. This was the first of 21 missions erected by the Spanish between 1769 and 1823. It was during this time that initial Spanish settlement of the project vicinity began. The land that currently encompasses Fullerton was part of the Spanish Mission San Gabriel Arcángel in the 18th century.

#### 3.3.2 Mexican Period (1822–1848)

The Mexican Period commenced when news of the success of the Mexican War of Independence (1810-1821) against the Spanish crown reached California in 1822. This period saw the privatization of mission lands in California with the passage of the Secularization Act of 1833. This Act federalized mission lands and enabled Mexican governors in California to distribute former mission lands to individuals in the form of land grants. Successive Mexican governors made more than 700 land grants between 1822 and 1846, putting most of the state's lands into private ownership for the first time (Shumway 2007).

The Mexican Period for the Orange County region ended in early January 1847. Mexican forces fought and lost to combined U.S. Army and Navy forces in the Battle of the San Gabriel River on January 8 and in the Battle of La Mesa on January 9 (Nevin 1978). On January 10, leaders of the pueblo of Los Angeles surrendered peacefully after Mexican General José María Flores withdrew his forces. Shortly thereafter, newly appointed Mexican Military Commander of California Andrés Pico surrendered all of Alta California to U.S. Army Lieutenant Colonel John C. Fremont in the Treaty of Cahuenga (Nevin 1978).

### 3.3.3 American Period (1848–Present)

The American Period officially began with the signing of the Treaty of Guadalupe Hidalgo in 1848, in which the United States agreed to pay Mexico \$15 million for conquered territory including California, Nevada, Utah, and parts of Colorado, Arizona, New Mexico, and Wyoming. Settlement of the Los Angeles region increased dramatically in the early American Period.

The discovery of gold in northern California in 1848 led to the California Gold Rush, though the first significant amount of California gold was previously discovered in Placerita Canyon in Los Angeles County in 1842 (Guinn 1977; Workman 1935:26). By 1853, the population of California exceeded 300,000. Thousands of settlers and immigrants continued to immigrate to the state, particularly after the completion of the First Transcontinental Railroad in 1869. The U.S. Congress in 1854 agreed to let San Pedro in Los Angeles County become an official port of entry. By the 1880s, the railroads had established networks from the port and throughout Los Angeles and Orange counties, resulting in fast and affordable shipment of goods, as well as a means to transport new residents to the booming region (Dumke 1944). New residents included many health-seekers drawn to the area by the fabled climate in the 1870s–1880s.

As populations increased, Orange County was created from the southern portion of Los Angeles County. Agriculture remained the primary economic activity until the 1950s, when the county's agricultural land was replaced with tract housing developments. In the mid-20th century, aerospace and manufacturing began expanding, and the opening of Disneyland created an international tourism industry (Orange County Historical Society 2015).

### 3.3.4 California State University, Fullerton

Originally known as Orange County State College, the university was founded in 1957 on a site still home to a number of citrus farms and agricultural fields. After the college was established, construction of buildings, classrooms, and facilities began in the southern portion of the campus. As the university expanded, the campus expanded, primarily to the north, east, and west, in stages over time.

The campus core was designed and constructed primarily through four major building campaigns and master planning efforts, in 1960, 1962, 1967, and 1974. Although the campus continued to expand through the years, including a gradual northward expansion as former citrus groves gave way to buildings, the focal point of the campus remained (and remains) the 1960s-1970s campus core. This development pattern reflects the rapid postwar expansion and construction boom in Fullerton and Orange County in general. In addition, with the heart of the campus designed and constructed within a short period of time, during the heyday of New Formalism, Brutalism, and Late Modernism, in particular in institutional design, the campus core exhibits cohesive unified architectural character and style.

## 4 Records Search and Outreach

### 4.1 Cultural Resources Records Search

On June 18, 2019, Rincon conducted a CHRIS records search at the South Central Coastal Information Center (SCCIC) located at California State University, Fullerton. The search was completed to identify previous cultural resources work and previously recorded cultural resources within a 0.5-mile radius of the project site. The search included a review of the National Register of Historic Place (NRHP), CRHR, California Points of Historical Interest list, the California Historical Landmarks list, the Archaeological Determinations of Eligibility list, and the California State Historic Resources Inventory list. The records search also included a review of all available historical USGS 7.5-, 15-, and 30-minute quadrangle maps.

#### 4.1.1 Previous Studies

The SCCIC records search identified 24 previous studies within a 0.5-mile search radius of the project site. Of these, six included portions of the project site. Together, these previous studies inventoried approximately 40 percent the current project site. Table 1 provides a summary of the studies found in the search radius; the records search results are attached in Appendix A.

**Table 1 Previous Cultural Resources Studies within 0.5-mile of the Project Site**

### 4.1.2 Previously Recorded Resources

The SCCIC records search identified 11 previously recorded cultural resources situated within a 0.5-mile radius of the project site. These resources consist of 10 historic-period buildings and 1 historic-period tree. Table 2 provides a summary of the previously recorded cultural resources within the record search area; these resources are discussed in more detail in the historical resources evaluation report that was prepared for the project. No archaeological resources have been recorded within the project site or record search area.

**Table 2 Previously Recorded Cultural Resources within 0.5-mile of the Project Site**

## 4.2 Native American Outreach

Rincon contacted the Native American Heritage Commission (NAHC) on June 21, 2019 to request a Sacred Lands File (SLF) search of the project site and a contact list of Native Americans who may have knowledge of cultural resources within the area. The NAHC responded on July 5, 2019, stating that the results of the SLF search were negative. Rincon sent letters to the NAHC-listed contacts and conducted follow-up calls on August 12, 2019. At the request of CSUF, Rincon also emailed Jacque Nunez of the Acjachemen Nation on October 16, 2019, to request information on Native American resources within the project vicinity. To date, no contacts have responded to letters or returned calls expressing any project related concerns. The lead agency for this project, CSUF, is conducting formal government-to-government consultation with interested Native American groups in accordance with AB 52. Copies of the Native American outreach correspondence are provided in Appendix B.

*This page left intentionally blank.*

## 5 Archaeological Field Survey

---

### 5.1 Methods

Rincon conducted a pedestrian field survey of the project site on July 15, 2019. The survey was performed using transect intervals spaced no greater than 15 meters, targeting areas of exposed ground surfaces on the CSUF campus. All exposed ground surfaces were examined for artifacts (e.g., flaked stone tools, tool-making debris, stone milling tools, ceramics, fire-affected rock), ecofacts (marine shell and bone), soil discoloration that might indicate the presence of a cultural midden, soil depressions and features indicative of the former presence of structures or buildings (e.g., standing exterior walls, postholes, foundations) or historic debris (e.g., metal, glass, ceramics). Ground disturbances such as burrows and drainages were also visually inspected.

### 5.2 Results

No archaeological resources were identified as a result of the field survey. Visibility of the ground surface across the project site was generally poor (less than 20 percent) as much of the area is covered with standing buildings and structures, hardscape, and landscaping (Figures 3-7). The small areas of exposed ground surfaces that were inspected by the archaeologist found no evidence of archaeological deposits or remains.

## 6 Findings and Recommendations

---

The records search, Native American outreach, and field survey identified no archaeological (prehistoric or historic) resources within the project site. Rincon recommends a finding of ***less than significant impact to archaeological resources with mitigation*** for the purposes of CEQA. Rincon recommends that a mitigation measure for the unanticipated discovery of archaeological resources be added to the CSUF Master Plan Update. The project is also required to adhere to regulations regarding the unanticipated discovery of human remains, detailed below.

### Unanticipated Discovery of Cultural Resources

If cultural resources are encountered during ground-disturbing activities, work in the immediate area must halt and an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (National Park Service 1983) should be contacted immediately to evaluate the find. If the discovery proves to be significant under CEQA, additional work such as data recovery excavation and Native American consultation may be warranted to mitigate any significant impacts.

### Unanticipated Discovery of Human Remains

The discovery of human remains is always a possibility during ground disturbing activities. If human remains are found, the State of California Health and Safety Code Section 7050.5 states that no further disturbance shall occur until the County coroner has made a determination of origin and disposition pursuant to Public Resources Code Section 5097.98. In the event of an unanticipated discovery of human remains, the County coroner must be notified immediately. If the human remains are determined to be prehistoric, the coroner will notify the Native American Heritage Commission (NAHC), which will determine and notify a most likely descendant (MLD). The MLD shall complete the inspection of the site within 48 hours of being granted site access and may recommend scientific removal and nondestructive analysis of human remains and items associated with Native American burials.

**RE: Archaeological Resources Study for the California State Fullerton Master Plan Update in the City of Fullerton, Orange County, California**

Dear Chairperson Belardes:

Rincon Consultants, Inc. (Rincon) was retained by California State University, Fullerton to complete an archaeological resources study in support of the Master Plan Update Project (project) located at North State College Boulevard in the City of Fullerton, California. This project is subject to the California Environmental Quality Act (CEQA) and consists of an update to the University's Master Plan.

As part of the process of identifying cultural resources for this project, Rincon contacted the Native American Heritage Commission (NAHC) on May 17, 2019 and requested a Sacred Lands File (SLF) search and a list of Native American tribal organizations and individuals who may have knowledge of sensitive cultural resources in or near the project site. Rincon has not yet received the results of the SLF search. In anticipation of the SLF results we are contacting groups and individuals known to Rincon to have ties to the region.

If you have knowledge of cultural resources that may exist within or near the project site, please do not hesitate to contact me at [mstrother@rinconconsultants.com](mailto:mstrother@rinconconsultants.com), or by telephone at (760) 918-9444 extension 2047. Thank you for your assistance.

Sincerely,

Rincon Consultants, Inc.

Mark Strother, MA  
Associate Archaeologist

# Executive Summary

---

Rincon Consultants, Inc. (Rincon) was retained by California State University, Fullerton (CSUF) to complete a campus-wide historic resources survey in support of the CSUF Master Plan Update. The objective of this survey is to provide baseline information to CSUF on historical resources on the campus, in advance of master planning efforts.

This report presents the results of the CSUF campus-wide historic resource survey. The survey included built environment properties 45 years of age and older; temporary buildings and structures were omitted from the survey. Work efforts included archival research, literature review, and ArcGIS analysis and mapping, to identify properties falling within the survey's 45-year window, and an intensive-level field survey. In addition, a records search of the California Historical Resources Inventory System (CHRIS) was completed of the project site; a summary of these findings is provided in a separate archaeological resources report. All activities were conducted in accordance with the requirements of the California Environmental Quality Act (CEQA) and applicable guidelines.

As a result of this study, a total of 13 historical resources were identified as eligible for the National Register of Historic Places (NRHP) and/or California Register of Historical Resources (CRHR). Based on their eligibility for the NRHP and CRHR, these properties are considered historical resources for purposes of CEQA. Per CEQA, the loss of character-defining features and, as a consequence, historic integrity represents a significant adverse impact to historical resources.

In order to manage changes and upgrades to historical resources, Rincon offers the following best management practices for CSUF. These recommendations apply to projects included in the Master Plan update as well as any future facilities modernization projects that involve historical resources. (These are not mitigation measures; mitigation measures are included in the Master Plan EIR.)

- 1. Design Modernization and Upgrade Projects to Comply with the *Secretary's Standards***
  - a. To streamline project implementation and environmental review
- 2. Commission CSUF Design Guidelines for Historic Resources**
  - a. To proactively, efficiently plan for modernization projects that avoid impacts to historical resources
- 3. Utilize California Historical Building Code (CHBC) for eligible historic resources properties**
  - a. In conjunction with the Department of the State Architect, CSUF can utilize the CHBC for qualifying buildings on a case-by-case basis to plan projects to historic properties that allow for upgrades while also protecting historic integrity
- 4. Focus on Noncontributing Lots and Properties for In-fill and Development Projects**
  - a. To avoid direct and indirect impacts to historical resources
- 5. Design and Install Interpretive Panels and Exhibit on CSUF History**
  - a. To convey the rich social and architectural history of CSUF to staff, students, and the community

*This page intentionally left blank.*

# 1 Introduction

---

## 1.1 Project Objective and Background

Rincon was retained by CSUF to complete a campus-wide historic resources evaluation in support of the CSUF Master Plan Update. The historic resources evaluation considered built environment properties 45 years of age or older; the evaluation did not include temporary buildings or structures. Work efforts included archival research, literature review, ArcGIS analysis and mapping, in order to characterize and present information on the dates of construction for all properties on campus, and an intensive-level field survey of the CSUF campus. The scope of work for this study did not include an archaeological survey/analysis. In addition, a records search of the California Historical Resources Inventory System (CHRIS) was completed of the project site; a summary of these findings is provided in a separate archaeological resources report. All activities were conducted in accordance with the requirements of the California Environmental Quality Act (CEQA) and applicable local regulations and guidelines.

This Historic Resources Survey Report, along with accompanying Arc-GIS shapefiles mapping out all historical resources, will provide an accessible method for CSUF to proactively identify and manage both historically significant and non-significant assets in support of future master planning and facilities upgrades efforts. This survey report does not include an impacts analysis or mitigation measures—recommendations made in this study represent best preservation management practices for CSUF’s many significant historic resources. The corresponding impacts analysis is included in the EIR completed as part of the Master Plan project.

Established during the late 1950s as Orange County State College, CSUF spans over 250 acres in eastern Fullerton; the college is located at 800 North State College Boulevard (see Figure 1 and Figure 2). The campus includes dozens of buildings, structures, objects, and landscaping elements that reflect decades of development history, from the citrus era in Fullerton to the postwar construction boom, in particular in institutional facilities. In addition to several late nineteenth and early twentieth century properties, which survive from the site’s former use as an expansive citrus farm, the campus consists of a central, historic campus core, constructed from the early 1960s through the early 1970s, as well as a number of more recent buildings and facilities.

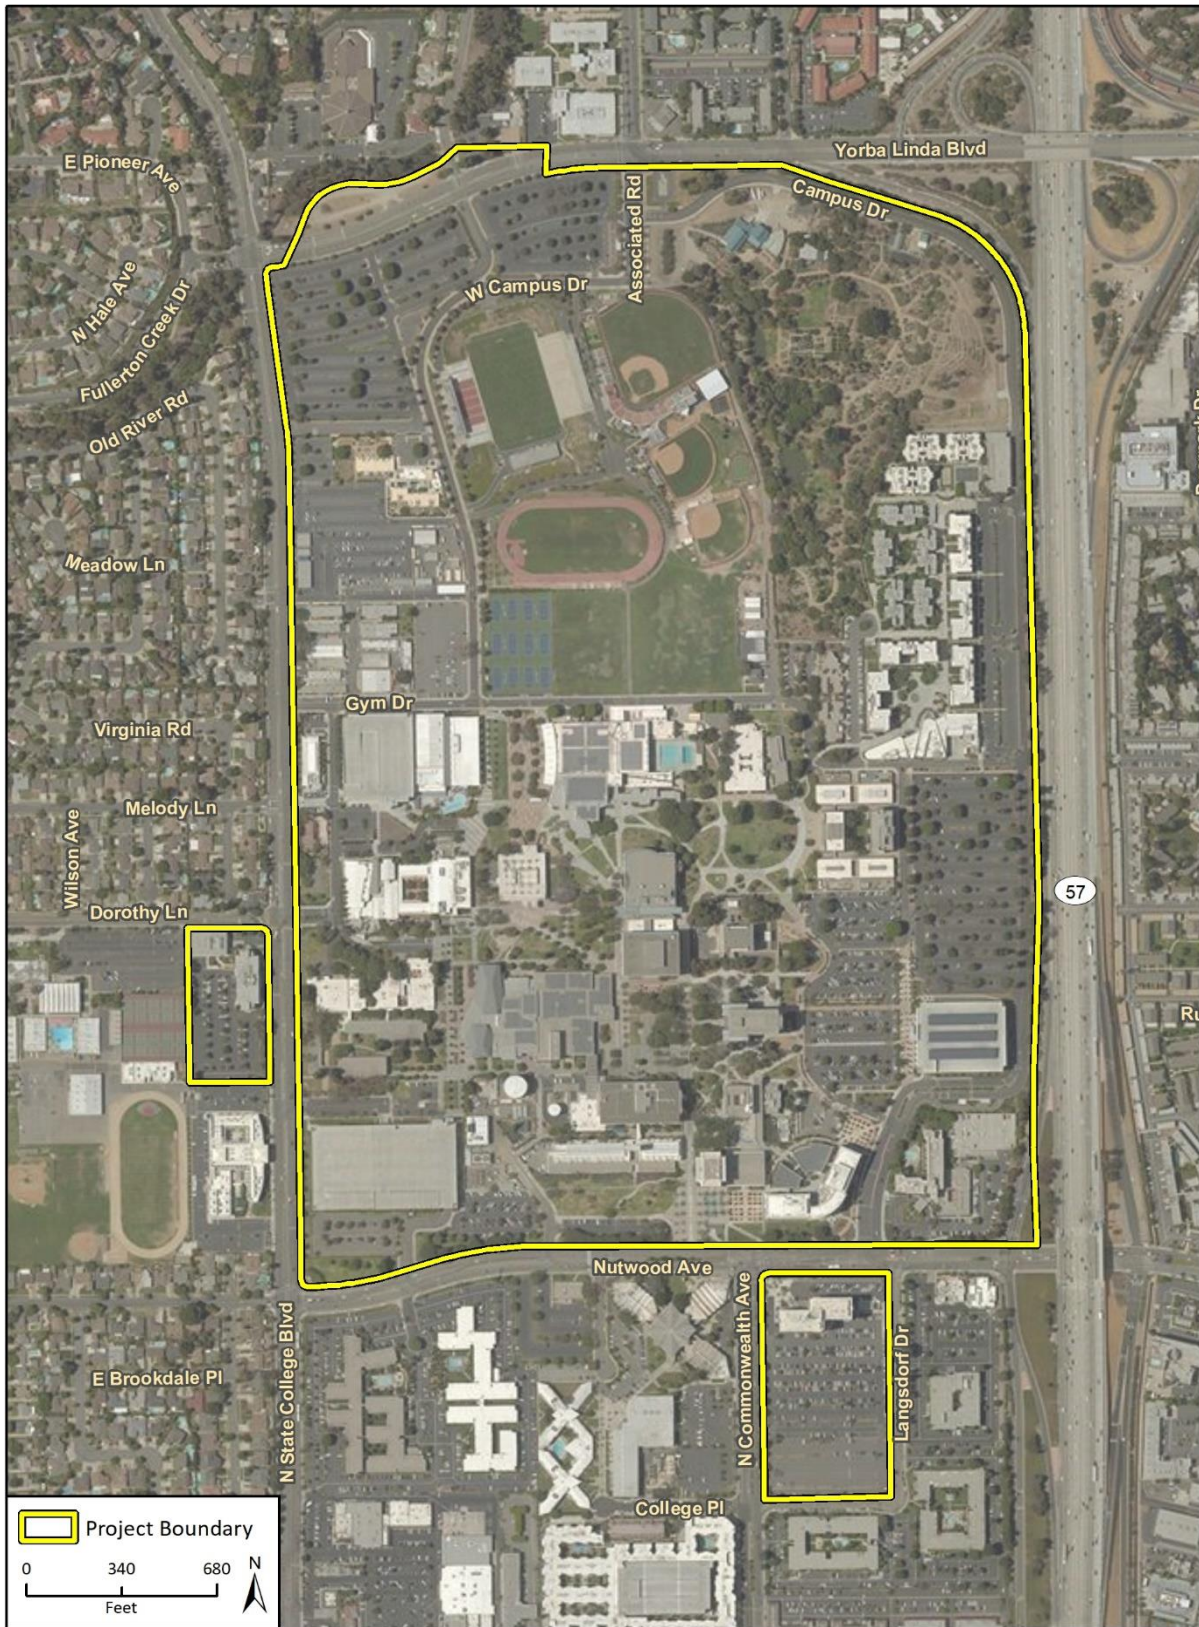

Much of the historic campus core was constructed in the late 1960s in a New Formalist/Late Modern architectural style. The campus includes the work of recognized master architects and landscape architects, including Thornton Abell; Herbert James Powell, Henry Morgridge, Albert A. Richards & Redmond R. Coghlan; and Ralph Cornell, Samuel Bridgers and Howard Troller. Although several buildings located on the campus have been previously identified as historically significant (including the Dr. George Clark House and Office, which is listed in the National Register of Historic Places), the campus as a whole has never been surveyed.

This Historic Resources Survey Report supports CSUF efforts to update the CSUF Campus Master Plan. The Campus Master Plan considers the existing and future needs of student housing, dining and amenities, informal and active learning spaces, research and innovation spaces, as well as the Arboretum. The Campus Master Plan also addresses potential impacts to the surrounding neighborhoods to enhance cohesion between CSUF and adjacent communities.

## 1.2 Regulatory Setting

This section describes the applicable significance criteria considered in the preparation of this study.

This historic resources survey did not include local level criteria. Per California State Government Code Section 53094, the properties of California school districts, including the CSU system, are statutorily exempt from most provisions of local ordinances, including landmark designation. California State Government Code, Section 53094 permits “the governing board of a school district, by vote of two-thirds of its members . . . [to] render a city or county zoning ordinance inapplicable to a proposed use of property by such school district.” The legislative history of Section 53094 indicates that “the Legislature deliberately accorded different treatment to school districts than to other local agencies because it was well aware that school construction was subject to almost complete control by the state... . The Legislature accordingly provided in section 53094 that school districts, as opposed to other local agencies, should retain the right to exempt themselves from local zoning ordinances (Santa Clara, *supra*, 22 Cal.App.3d at p. 158 fn. 3).”<sup>1</sup>

### Federal

#### National Register of Historic Places

The National Register of Historic Places (NRHP) was established by the National Historic Preservation Act of 1966 as “an authoritative guide to be used by Federal, State, and local governments, private groups and citizens to identify the Nation’s cultural resources and to indicate what properties should be considered for protection from destruction or impairment” (CFR 36 CFR 60.2). The NRHP recognizes properties that are significant at the national, state, and local levels. To be eligible for listing in the NRHP, a resource must be significant in American history, architecture, archaeology, engineering, or culture. A property is eligible for the NRHP if it:

- Criterion A. Is associated with events that have made a significant contribution to the broad patterns of our history; or
- Criterion B. Is associated with the lives of persons significant in our past; or
- Criterion C. Embodies the distinctive characteristics of a type, period, or method of installation, or represents the work of a master, possesses high artistic values, or represents a significant and distinguishable entity whose components may lack individual distinction; or
- Criterion D. Has yielded, or may be likely to yield, information important in prehistory or history.

In addition to meeting these criteria, a property must retain historic integrity, which is defined in National Register Bulletin 15 as the “ability of a property to convey its significance” (National Park Service 1990). In order to assess integrity, the National Park Service recognizes seven aspects or qualities that, considered together, define historic integrity. To retain integrity, a property must possess several, if not all, of these seven qualities, which are defined in the following manner in National Register Bulletin 15:

1. **Location.** The place where the historic property was constructed or the place where the historic event occurred.
2. **Design.** The combination of elements that create the form, plan, space, structure, and style of a property.

3. **Setting.** The physical environment of a historic property.
4. **Materials** are the physical elements that were combined or deposited during a particular period of time and in a particular pattern or configuration to form a historic property.
5. **Workmanship.** The physical evidence of the crafts of a particular culture or people during any given period in history or prehistory.
6. **Feeling.** A property's expression of the aesthetic or historic sense of a particular period of time.
7. **Association.** The direct link between an important historic event or person and a historic property.

Some aspects of integrity may be accorded more weight than others, depending on the type of resource being evaluated and the applicable eligibility criteria. Integrity can be assessed only after it has been concluded that a resource is significant.

### **Secretary of the Interior's Standards for Rehabilitation**

In accordance with the National Park Service and CEQA Guidelines, projects that comply with the *Secretary's Standards for the Treatment of Historic Properties* and *Secretary's Standards for Rehabilitation (Secretary's Standards)* are projects that retain the historic integrity of the resource. According to CEQA Guidelines, a project that complies with the *Secretary's Standards* is generally considered to be a project that will not cause a significant adverse impact to a historical resource.

The goal of the *Secretary's Standards* is to outline treatment approaches that allow for the retention of and/or sensitive changes to the distinctive materials and features that lend a historical resource its significance. The *Secretary's Standards* and Guidelines offer general recommendations for preserving, maintaining, repairing, and replacing historical materials and features, as well as designing new additions or making alterations. These standards also provide guidance on new construction adjacent to historic districts and properties, in order to ensure that there are no indirect adverse impacts to historic properties.

Rehabilitation is the most flexible treatment approach of the *Secretary's Standards*. The ten *Secretary's Standards for Rehabilitation* are:

1. A property shall be used for its historic purpose or be placed in a new use that requires minimal change to the defining characteristics of the building and its site and environment.
2. The historic character of a property shall be retained and preserved. The removal of historic materials or alteration of features and spaces that characterize a property shall be avoided.
3. Each property shall be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or architectural elements from other buildings, shall not be undertaken.
4. Most properties change over time; those changes that have acquired historic significance in their own right shall be retained and preserved.
5. Distinctive features, finishes, and construction techniques or examples of craftsmanship that characterize a property shall be preserved.
6. Deteriorated historic features shall be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature shall match the old in design, color, texture, and other visual qualities and, where possible, materials.

Replacement of missing features shall be substantiated by documentary, physical, or pictorial evidence.

7. Chemical or physical treatments, such as sandblasting, that cause damage to historic materials shall not be used. The surface cleaning of structures, if appropriate, shall be undertaken using the gentlest means possible.
8. Significant archeological resources affected by a project shall be protected and preserved. If such resources must be disturbed, mitigation measures shall be undertaken.
9. New additions, exterior alterations, or related new construction shall not destroy historic materials that characterize the property. The new work shall be differentiated from the old and shall be compatible with the massing, size, scale, and architectural features to protect the historic integrity of the property and its environment.
10. New additions and adjacent or related new construction shall be undertaken in such a manner that if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.

The *Secretary's Standards and Guidelines* offer general recommendations for preserving, maintaining, repairing, and replacing historical materials and features, as well as designing new additions or making alterations.<sup>2</sup> The *Secretary's Standards for Rehabilitation* also provide guidance on new construction adjacent to historic districts and properties, in order to ensure that there are no adverse indirect impacts to integrity as a result of a change in setting. Applying the *Secretary's Standards* to new construction adjacent to historic resources helps ensure avoidance of indirect impacts and retention of the setting and feeling of the historic resource and its surrounding environment.

*Secretary's Standards* compliance begins with the identification and documentation of the "character-defining," or historically significant, features of the historical resource. According to Preservation Brief 17, *Architectural Character: Identifying the Visual Aspects of Historic Buildings as an Aid to Preserving Their Character*, there is a three-step process to identifying character-defining features (Nelson, 1982). Step 1 involves assessing the physical aspects of the building exterior as a whole, including its setting, shape and massing, orientation, roof and roof features, projections, and openings. Step 2 looks at the building more closely—at materials, trim, secondary features, and craftsmanship. Step 3 encompasses the interior, including individual spaces, relations or sequences of spaces (floor plan), surface finishes and materials, exposed structure, and interior features and details. Alterations and replacement of character-defining features over time can impair a historic property's integrity and result in a loss of historic status. Therefore, to ensure that a historic property remains eligible after implementation of projects, character-defining features should be identified and preserved.

## State

The policies of the NHPA are implemented at the state level by the California Office of Historic Preservation, a division of the California Department of Parks and Recreation. The Office of Historic Preservation is also tasked with carrying out the duties described in the Public Resources Code and maintaining the California Historic Resources Inventory and CRHR. The state-level regulatory framework also includes CEQA, which requires the identification and mitigation of substantial adverse impacts that may affect the significance of eligible historical and archeological resources.

## California Register of Historical Resources

Created in 1992 and implemented in 1998, the CRHR is “an authoritative guide in California to be used by state and local agencies, private groups, and citizens to identify the state’s historical resources and to indicate what properties are to be protected, to the extent prudent and feasible, from substantial adverse change.”<sup>1</sup> Certain properties, including those listed in or formally determined eligible for listing on the NRHP and California Historical Landmarks numbered 770 and higher, are automatically included on the CRHR.

According to PRC Section 5024.1(c), a resource, either an individual property or a contributor to a historic district, may be listed in the CRHR if the State Historical Resources Commission determines that it meets one or more of the following criteria, which are modeled on NRHP criteria:

- Criterion 1:** It is associated with events that have made a significant contribution to the broad patterns of California’s history and cultural heritage
- Criterion 2:** It is associated with the lives of persons important in our past
- Criterion 3:** It embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values
- Criterion 4:** Has yielded, or may be likely to yield, information important in prehistory or history

Properties that do not retain sufficient integrity for NRHP listing can still qualify for listing in the CRHR. Historical resources eligible for listing in the California Register must meet one of the criteria of significance described above and retain enough of their historic character or appearance to be recognizable as historical resources and to convey the reasons for their significance.

## California Environmental Quality Act (CEQA)

CEQA requires a lead agency to analyze whether historic and/or archaeological resources may be adversely impacted by a proposed project. Under CEQA, a “project that may cause a substantial adverse change in the significance of a historic resource is a project that may have a significant effect on the environment” (PRC Section 21084.1).

Answering this question is a two-part process: first, the determination must be made as to whether the proposed project involves cultural resources. Second, if cultural resources are present, the proposed project must be analyzed for a potential “substantial adverse change in the significance” of the resource.

According to CEQA Guidelines Section 15064.5, historic resources are:

1. A resource listed in, or formally determined eligible for listing in, the California Register of Historical Resources (PRC 5024.1, Title 14 CCR, Section 4850 et seq);
2. A resource included in a local register of historical resources, as defined in Section 5020.1(k) of the PRC or identified as significance in a historic resources survey meeting the requirements of Section 5024.1(g) of the PRC;
3. Any building, structure, object, site, or district that the lead agency determines eligible for national, state, or local landmark listing; generally, a resource shall be considered by the

---

<sup>1</sup> Public Resources Code, Sections 21083.2 and 21084.1.

lead agency to be historically significant (and therefore a historic resource under CEQA) if the resource meets the criteria for listing on the California Register (as defined in PRC Section 5024.1, Title 14 CCR, Section 4852).

Resources nominated to the CRHR must retain enough of their historic character or appearance to convey the reasons for their significance. Resources whose historic integrity (as defined in previous section) does not meet NRHP criteria may still be eligible for listing in the CRHR.

According to CEQA, the fact that a resource is not listed in or determined eligible for listing in the California Register or is not included in a local register or survey shall not preclude the lead agency from determining that the resource may be an historical resource (PRC Section 5024.1). Pursuant to CEQA, a project with an effect that may cause a substantial adverse change in the significance of a historical resource may have a significant effect on the environment (CEQA Guidelines, Section 15064.5(b)).

CEQA Guidelines specify that “substantial adverse change in the significance of an historical resource means physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired” (CEQA Guidelines, Section 15064.5).

Material impairment occurs when a project alters in an adverse manner or demolishes “those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion” or eligibility for inclusion in the NRHR, CRHR, or local register. In addition, pursuant to CEQA Guidelines Section 15126.2, the “direct and indirect significant effects of the project on the environment shall be clearly identified and described, giving due consideration to both the short-term and long-term effects.”

In terms of indirect impacts, pursuant to CEQA Guidelines, Section 15378, study of a project under CEQA requires consideration of “the whole of an action, which has the potential for resulting in either a direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment.” CEQA Guidelines, Section 15064d further define direct and indirect impacts:

1. A direct physical change in the environment is a physical change in the environment which is caused by and immediately related to the project.
2. An indirect physical change in the environment is a physical change in the environment which is not immediately related to the project, but which is caused indirectly by the project. If a direct physical change in the environment in turn causes another change in the environment, then the other change is an indirect physical change in the environment.

An indirect physical change is to be considered only if that change is a reasonably foreseeable impact that may be caused by the project.

## 1.3 Project Methodology

### Literature Review and Research

This historic resources survey was completed in order to provide baseline information to CSUF on qualifying historical resources on campus, in advance of master planning efforts. The survey was completed in accordance with recognized professional standards, following the Secretary of the Interior's Standards for Preservation Planning, Identification, Evaluation and Registration; California Office of Historic Preservation; and National Park Service professional standards and guidelines. Applicable national, state, and local level criteria were considered.

Rincon conducted literature review and background research for the proposed project from July through September 2019. Several primary and secondary sources were consulted over the course of the project including:

- Campus planning reports including the CSUF Master Plan Report (2003) and the CSUF Facilities Report
- Architectural and site development building plans
- Historic aerial photographs and obtained from Environmental Data Resources (EDR)
- Historical photographs and maps
- Historical newspaper articles from the *Los Angeles Times*, the *Orange County Register*, the *Santa Ana Register*, and the *Daily Titan* among others
- American Architects Directory and Pacific Coast Architecture Database

A variety of additional secondary source materials were also consulted including written histories of the area. Archival research was completed at the Fullerton Public Library and CSUF Pollak Library, to review reference materials on local history and to prepare the historic setting section of this report. Fullerton Heritage was consulted in order to gather applicable materials on New Formalism in Fullerton as well as the history of the CSUF campus.

### CHRIS Records Search

This section describes the cultural resources records and studies on file with the California Historical Resources Information System (CHRIS) at the South Central Coastal Information Center located at CSUF. On June 18, 2019, Rincon performed a CHRIS search to identify previously identified cultural resources that have been recorded on the project site, as well as previously conducted cultural resources studies that have included a portion of the project site and 0.5-mile radius surrounding it (records search area).

The CHRIS search additionally included a review of the NRHP and the CRHR, as well as available historic maps and aerial photographs. Records search results are described in more detail in the Phase I Cultural Resources Report completed for the project (Rincon 2019).

The SCCIC records search identified 24 previous studies within a 0.5-mile search radius of the project site. Of these, six included the project site. The SCCIC records search identified 11 previously recorded prehistoric or historic resources situated within a 0.5-mile radius of the project site. Of these resources, four are within the project site (as described below). Review of the Los Angeles County Historical Resources Inventory (HRI) identified three of these four resources as previously designated and listed.

All of these resources are also described and mapped in Section 5 of this report.

Located in the northern portion of the main CSUF campus, the Henry T. Hetebrink House (Titan House; P-30-157296) was previously found individually eligible for the NRHP (California Historic Resources Status Code 3S). Located in the western portion of campus, near N. State College Blvd., the Mahr House, known as the George G. Golleher Alumni House (P-30-15795), was previously found individually eligible for local listing (5S2). Located in the northern portion of campus on the grounds of the Arboretum, the Dr. George C. Clark House and Office (P-30-157297), also called the Heritage House, is individually listed on the NRHP (1S).

## Field Survey

On August 14 and September 10, 2019, Rincon Senior Architectural Historian Debi Howell-Ardila, MHP, and Architectural Historian Alexandra Madsen, MA, conducted an intensive-level survey of CSUF. Ms. Howell-Ardila and Ms. Madsen meet the *Secretary of the Interior's Professional Qualification Standards* in the fields of Architectural History and History. The field survey included all permanent buildings, structures, objects, landscaping/hardscaping features that are 45 years of age or older (constructed through the year 1975). Temporary buildings and structures were not included in the survey (Figure 4).

The existing conditions and character-defining features of resources were documented in field notes and digital photography. One campus resource, the Arboretum complex, was designed and constructed through the 1970s, with the final components completed in 1979. Because the Arboretum includes components 45 years of age and older, it was included in the survey.

## 2 Campus Overview

---

CSUF is an over 250-acre campus in eastern Fullerton, Orange County. Although campus buildings represent a wide range of dates of construction, the original campus core was constructed in a relatively short period of time, from the early 1960s through the mid-1970s. This section presents a brief overview of the campus as a whole; the historic context and setting for the campus is presented in Section 3.

Originally known as Orange County State College, the university was founded in 1957 on a site still home to a number of citrus farms and agricultural fields. After the college was established, construction of buildings, classrooms, and facilities began in the southern portion of the campus. As enrollment and demand grew, the university facilities expanded accordingly, primarily to the north, east, and west, in stages over time.

The campus core was designed and constructed primarily through four major building campaigns and master planning efforts, in 1960, 1962, 1967, and 1974. Although the campus continued to expand through the years, including a gradual northward expansion as former citrus groves gave way to buildings, the focal point of the campus remained (and remains) the 1960s-1970s campus core. This development pattern reflects the rapid postwar expansion and construction boom in Fullerton and Orange County in general. In addition, with the heart of the campus designed and constructed within a short period of time, during the heyday of New Formalism, Brutalism, and Late Modernism, in particular in institutional design, the campus core exhibits cohesive unified architectural character and style.

Components of the campus core include the site plan overall, associated buildings and structures, landscaping, and spatial relationships characterizing them, as well as unifying circulation corridors and outdoor spaces. Additional significant hardscaping and landscaping is evident in the east campus, designated the lawn, which is located between the Engineering and Computer Sciences Building Complex and the Student Health & Counseling Center. A third landscaped area of note is situated to the west of the central quad between the Titan Gymnasium and Book Store/Titan Shop and is characterized by a linear swath of lawn and plaza with intermittent mature tree plantings.

As CSUF grew, numerous permanent buildings and support structures, as well as temporary buildings/structures were added. As of 2019, the campus consists of approximately 118 buildings and structures, both permanent and temporary. Among those, approximately 48 were constructed prior to 1975; another 70 were constructed after 1975. Temporary buildings and structures account for 21 of the total, another 97 are permanent buildings and structures. This evaluation focused on permanent buildings, structures and features aged 45 years and older as of 2019.

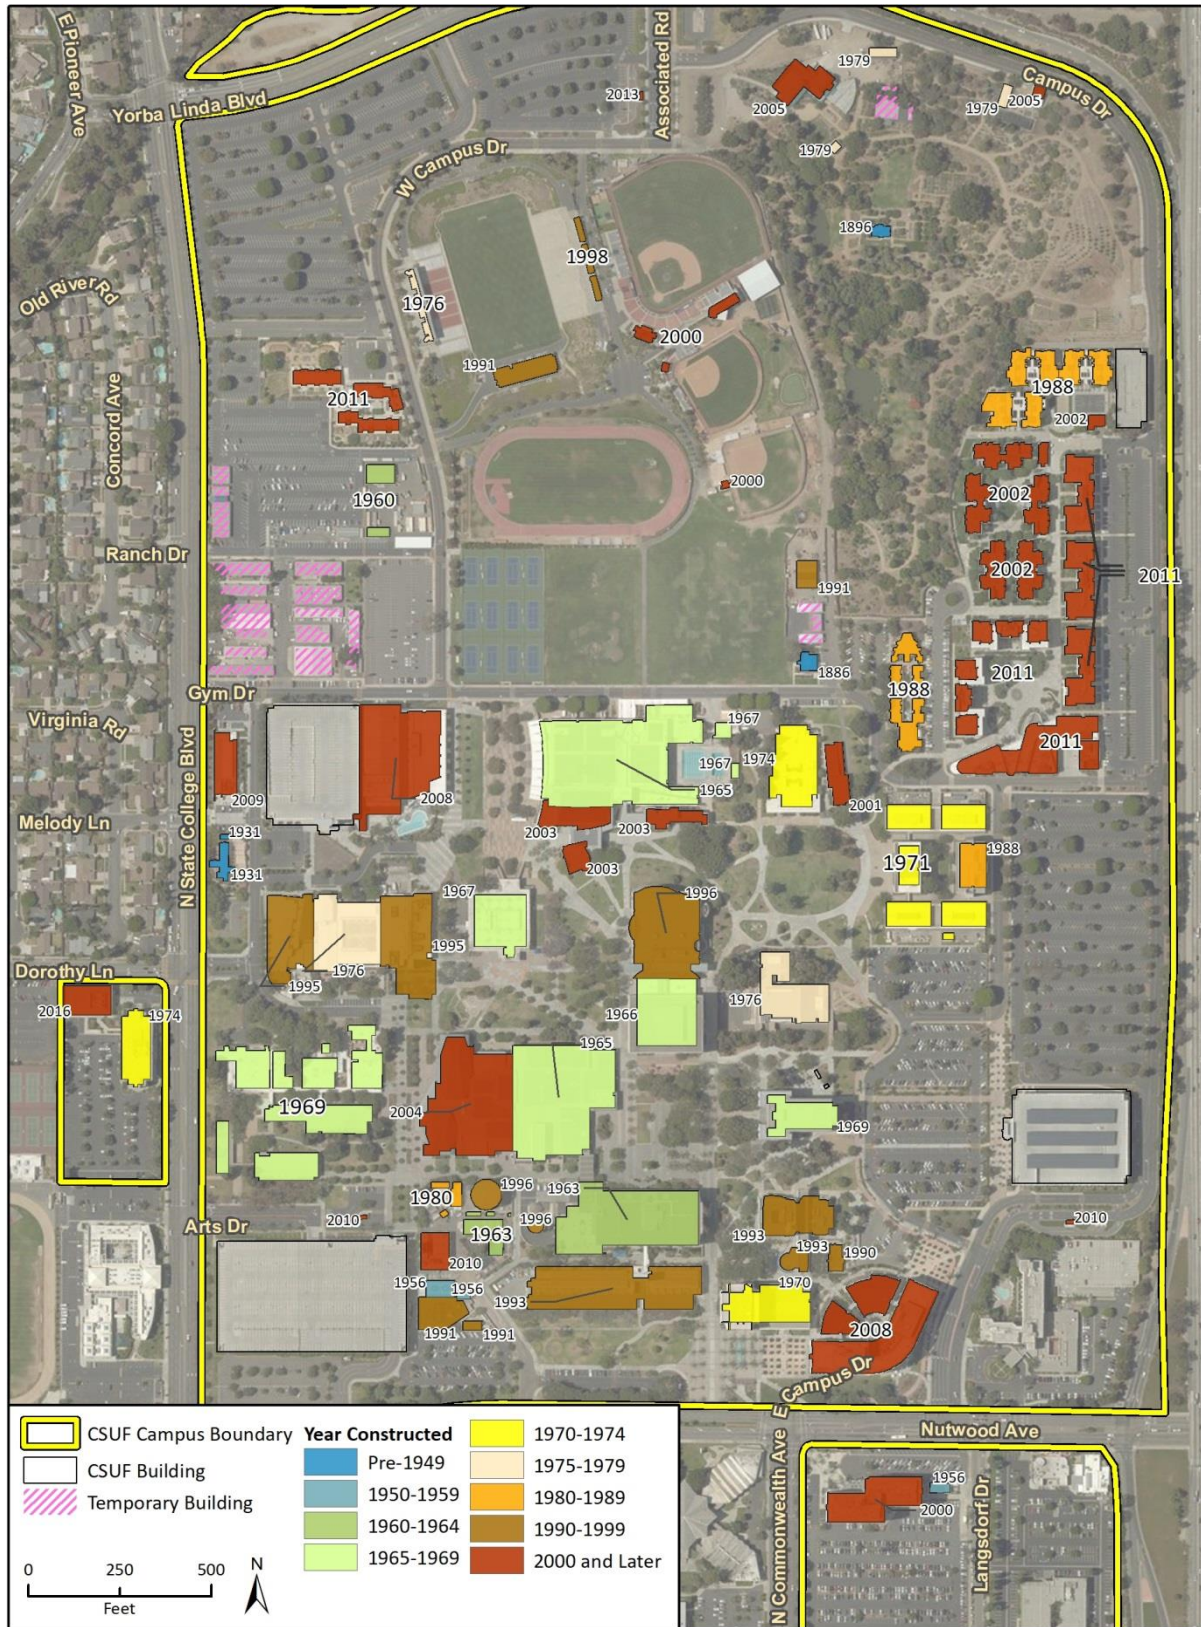

Table 1 below provides an overview of the principal permanent buildings on the campus that are 45 years of age or older, including the building names (historic and current), year constructed, and any associated builders or architects.

A visual overview of the campus and its construction chronology is provided in the following figures. Figure 3 provides a construction chronology of the campus and Figure 4 identifies all facilities included in this evaluation—namely, all permanent facilities and campus features 45 years of age or older as of 2019 (with construction dates up to 1975).

**Table 1 Dates of Construction and Architects, CSUF Facilities Constructed through 1975**

<b>Current Building Name</b>	<b>Historic Building Name</b>	<b>Year</b>	<b>Architect/Builder</b>
Titan House	Henry T. Hetebrink House	1886	Henry T. Hetebrink (B)
Heritage House	Dr. George C. Clark House and Office	1896	A.D. Porter and H.A. McWilliams (B)
George G. Golleher Alumni House	Mahr House	1931	Clinton F. Abbott (B) of Pacific Ready-Cut Homes Inc.
McCarthy Hall	Letters and Science Building	1963	Kemp Brothers (B) George Thompson (B)
Clayes Performing Arts Center	Music-Speech-Drama Building	1965	R. J. Daum Construction Company (B)
Titan Gymnasium/ Kinesiology & Health Science Building (3 buildings)	Physical Education Gymnasium Building	1965-1967	J. B. Allen & Company (B)
Pollak Library	Library	1966	Risley, Gould & Van Heuklyn (A) J. B. Allen & Company (B)
Book Store/Titan Shops	Cafeteria-Commons Building	1967	R. J. Daum Construction Company (B)
Humanities and Social Sciences Building	Same	1969	Thornton M. Abell (A) James I. Barnes Construction Co. (B)
Visual Arts Building Complex (6 buildings)	Same	1969	Thornton M. Abell (A)
Langsdorf Hall	Administration Building	1970	William E. Blurock & Partners (A) Balch, Hutchason & Perkins (A) James I. Barnes (B)
Engineering and Computer Science Building Complex (5 buildings)	Engineering Building	1971	Tutor-Myers Co. (B)
Student Health & Counseling Center	Health Center	1974	Mallcraft Inc. (B)
Titan Hall	Western State University College of Law	1974	George T. Nowak and Associates (A)
Arboretum	Same	1972-1979	Bridgers, Troller, and Hazlett (LA)

## 3 Historic Context and Setting

---

This section provides the historic setting and context information for CSUF, divided chronologically and according to significant themes. The purpose of the historic context section is to provide a context-based framework for historic resource evaluations of the CSUF campus. The focus is on the eras and themes represented in the extant built environment of CSUF—namely, pre-CSUF, during Fullerton’s citrus age, and the postwar boom and institutional expansion of Fullerton and Orange County, given the campus’s 1957 establishment and subsequent expansion in the 1960s and 1970s (and beyond). This section also considers the larger themes that affected the region, such as the institutional development of the California State University (CSU) system, and the rise of New Formalist and Brutalist-style architecture in the 1960s and 1970s. Finally, it considers several key events that shaped the history and culture of CSUF.

### 3.1 Fullerton's Founding Years and the Citrus Age

Fullerton is located in the northern region of Orange County in Southern California. The land that currently encompasses Fullerton was part of the Spanish Mission San Gabriel Arcángel in the 18th century. With the liberation of Mexico from Spain in 1821 and the dissolution of the missions in 1833, Mexico established agency over the newly secularized land in Alta California. One way in which the new country rewarded loyalty and began to populate these northern stretches was with land grants. In 1837, the Mexican government bestowed one such grant of 35,970 acres of land on soldier Juan Pacífico Ontiveros. This area encompasses much of present-day Anaheim, Placentia, and Fullerton. Ontiveros settled in an adobe at the site, called the Rancho San Juan Cajon de Santa Ana, where he worked as a rancher. Like many other land grants after the cession of California to the United States in 1848, the U.S. honored Ontiveros’ rancho grant and he continued to reside on the land until the 1850s. By the mid-19<sup>th</sup> century, Ontiveros sold much of the land, which was parceled out to new Anglo settlers moving westward.<sup>3</sup> Numerous settlers purchased land in the area, although most development was scattered until the 1880s.

Prior to the establishment of Fullerton proper, a number of families made the trek to the area to establish farms. The town only started to emerge, however, following the arrival of brothers George and Edward Amerige, grain merchants from Boston. In 1886, the Amerige brothers visited the region for a quail hunting excursion when they learned that the Santa Fe Railway was planning its expansion into the area. The enterprising pair purchased over 400 acres of land with the intent of establishing a town near the railroad. The brothers laid stake to the town but recognized that the availability of transportation lines would determine the town’s success or failure.

In 1887, they negotiated with George H. Fuller, president of the Pacific Land and Improvement Company, to include the townsite in the railway’s survey in exchange for free right-of-way and half interest in the land. The town of Fullerton was officially founded on July 5, 1887, when Edward Amerige plotted the town in the middle of a mustard field, naming the new town after George H. Fuller.<sup>4</sup> The town’s honoring George H. Fuller was no surprise, as he ensured the railroad was routed through the fledgling town.

Within a few short months, the town site was platted, the land cleared, streets graded, and buildings erected in the new town. The town site’s layout exhibits a grid plan with subdivision of relatively standard proportions. Spadra Road served as the town’s main thoroughfare, and

businesses along the strip formed the nucleus of the nascent site. A hotel block in the central region recounts the location where Edward Amerige placed his stake and would serve as the location of the St. George Hotel (1888), one of the first buildings constructed in the nascent town. The map also shows the railroad and accompanying landscaping along the southern extent of the town (Figure 5).

As industry took root in the area, the downtown corridor steadily expanded. Early pioneers included Dr. George C. Clark, first physician, whose residence is now situated on CSUF's arboretum; William Starbuck, first druggist; E. E. Beasley, first postmaster; T. S. Grinshaw, first lumber yard owner; and A. A. Pendergrast, first blacksmith, among others.<sup>5</sup>

The first water well was drilled in September 1887 and the first train traveled to Fullerton in the autumn of 1888. A photograph from this year shows the original Fullerton Depot as it stood after its completion (Figure 5). Although the building is no longer extant, the photograph provides evidence of the relatively sparse landscape and mustard fields that characterized the area. This flat, somewhat arid land was dramatically changed with the later introduction of citrus farming.

**Figure 5 Fullerton Depot in 1888**

Source: Fullerton Public Library, 1888

In 1904, Fullerton was incorporated as a city. It was recorded as occupying 18 miles with a population of 3,000 people. The Fullerton public library was founded as a reading room in 1902 and replaced with a Carnegie-funded building in 1907 (demolished in 1940).<sup>6</sup> Examples of resources associated with this early founding era include the Henry Hetebrinker House, a rare example of a 19<sup>th</sup> century brick residence, as well as the Dr. George C. Clark House and Office, which was moved to the campus in 1972.

## Early Agricultural Development in the Area

Agricultural development in the area falls into two main eras: an early, noteworthy experiment in a vegetarian colony (known as the “Placentia District”) on and near the present site of CSUF, and the subsequent era of citrus cultivation. The first development occurred in the 1870s with the establishment of Thales Ranch, or the Placentia Colony, on ten acres that would later be purchased for CSUF. The second wave of agricultural development occurred in the 1880s with the introduction of citrus plants to the area. Many of these orchard fields were also purchased for the development of CSUF.

### *The Vegetarian Colony of the “Placentia District”*

Including a portion of CSUF, Thales Ranch was founded in circa 1885 by Englishman George Hinds, Methodist preacher Walter Lockwood Thales, and William Weiderholdt. The vegetarian colony spanned 10 acres, with six acres planted with persimmons, two with avocados, one with guavas, and the remaining land with various tropical fruits.<sup>7</sup>

In 1901, the *Los Angeles Times* published a full-page story on the colony. Titled “Queer Spirits of Vegetarian Sect: They Live in Round Rooms and on Cocoanut Milk—Vagaries of Placentia’s Unique and Unhappy Colony,” the article provided insight into the Vegetarian Society at the Ranch, also known as the Placentia Settlement. The article recorded the groups’ belief in good and evil spirits, and their learnings towards theosophy.<sup>8</sup>

Members of the group who died while residing at the colony were buried on the land in widely separated places; some were exhumed in the 1970s.<sup>9</sup> Settlers living in the surrounding area were very wary of the colony and referred to those living there derogatorily as “grass eaters.” In 1874, the group built a mansion at the ranch (Figure 6).

According to a *Santa Ana Register* article from 1931:

During the 46 years these three men were owners of the place, they developed from a bankrupt property perhaps the most valuable ranch in the community, the real estate being worth at that time about \$60,000.<sup>10</sup>

During the history of the ranch there was some controversy as to its nature, with some factions arguing that there was a “free love colony” on the ranch, thereby earning the name of the “Placentia Colony.”<sup>11</sup> The group’s secretive and isolated nature fueled these rumors, as most contact with outsiders was limited to the sales of nuts and fruit. One lasting contribution of the colony to the community was in the development of the “Placentia Perfection” walnut, which accounted for a third of all walnuts grown in California by 1933.<sup>12</sup>

The deaths of Hinds (in 1911) and Thales and Weiderholdt (in 1921) signaled the decline of colony, which was purchased in 1931 by S. James Tuffree. At that time, Tuffree demolished the ranch. The state subsequently purchased part of the land from Tuffree for development of the CSUF campus.

**Figure 6 Original Placentia Colony Residence (1901)**

Source: Los Angeles Times, 1901

### *Citrus in Fullerton*

Perhaps the most dramatic change in the City's character came in the form of agriculture, and more specifically, citrus. One of the pioneering citrus farmers in Fullerton was Charles C. Chapman. Chapman, a retired publisher from Chicago, moved to Fullerton in circa 1889, where he acquired land and began cultivating Valencia oranges. His "Old Mission" brand of oranges became a customer favorite. Chapman also enjoyed success in the oil industry; his famous Chapman "Gusher" secured him a position as one of the town's richest citizens. He also served as the first mayor of Fullerton.<sup>13</sup>

Another early, successful citrus farmer in the area was Richard H. Gillman, who settled near the land currently occupied by the CSUF Arboretum. Gillman began cultivating oranges in Fullerton in 1875. Operating as the "Semi-Tropic Fruit Ranch," many of Gillman's groves survived until the 1970s, when they were removed for construction of the campus. Some of the original trees are said to have survived, but further information (i.e., confirmation by an arborist) was not available at the time of this study.<sup>14</sup>

In the late nineteenth century, a number of early ranching families in Fullerton transitioned to agriculture. The Hetebrink family, which had operated a dairy farm since 1874, turned to citrus cultivation after the crop's popularity and profitability became evident. The Bastanchurt family, which owned a herd of over 1,000 sheep, also turned to citrus by the late 19<sup>th</sup> century. By the 1920s, Gaston Bastanchurt owned one of the largest orange groves in the region, with over 3,000 acres within the city limits of Fullerton and an additional 8,000 acres under lease (Figure 7).<sup>15</sup>

**Figure 7 A “Portion of World’s Largest Orange Orchard, Fullerton”**

Source: Photo Courtesy Orange County Historical Society, n.d.

By the turn of the century, many of the farmers of Fullerton organized into co-operative associations. These associations were responsible for tracking citrus market conditions to ensure proper distribution of the city’s products. This cooperative marketing organization allowed otherwise competing farmers to work together towards. <sup>16</sup> Continuing in the 20<sup>th</sup> century, these co-operatives brought new technological advances and industries to local farmers.

In the 1920s, many farms in Fullerton began to make use of the latest technologies in food processing as well as food production. With these improvements, production continued to expand. In 1928, for example, the estimated value of Fullerton agricultural industry was approximately \$30 million. <sup>17</sup> A number of orange packing companies were also established in this period, including the Elephant Packing House, Walnut Packing House and Fullerton Packing Company; these packing companies further supplemented the city’s economic growth and served as strong employment centers (Figure 8).

**Figure 8 Fullerton Packing Company**

Source: Fullerton Public Library, n.d.

Along with this expanding employment base, Fullerton's population grew rapidly in the mid-1920s and early 1930s as many new settlers arrived. By 1926, Fullerton's population had grown to over 12,000.<sup>18</sup> In addition, the economy continued to diversify, with the industrial sector also showing rapid expansion through the boom of the 1920s. In 1926, the Fullerton Chamber of Commerce purchased 240 acres of land for industrial development. Industries established included a glass factory, fruit juice plant, and a gas absorption machine plant. This growth was noted in a 1928 newspaper article, which observed:

Fullerton has twenty-three active plants, which include eleven citrus fruit, walnut and avocado packing plants, agricultural machinery, brick manufacturing, four-unit cannery, piston ring manufacturer, two citrus fruit juice manufacturers, tile, shock absorber, two wholesale ice houses, ornamental brick, and ornamental iron works, wholesale bakery, auto top and lawn sprinkler manufacturers.<sup>19</sup>

Citrus production continued to be an important industry in Fullerton into the 1930s, following a general decline during the Great Depression. During World War II, many defense-related industries arrived in the county (and the region). Following the war, the agricultural character of Fullerton and Orange County slowly began to shift, with acres of groves giving way to new residential tracts and accompanying amenities. The citrus groves on the site of present-day CSUF were cleared in the 1960s and 1970s.

Fullerton's early association with the agriculture and citrus industry is evident in numerous resources in the City and on the CSUF campus. Although the groves themselves are gone, a number of built environment resources associated with the early agricultural years survive. These resources include residences associated with notable farmers of the area, packing houses, industrial food

processing plants, and other buildings and structures. One example on the CSUF campus is the Hetebrink House (1884), home of the Hetebrink family.

*The Titan House (Henry T. Hetebrink House)*

The Henry T. Hetebrink House (1886) was owned by members of the Hetebrink family and remains extant on the CSUF campus. Henry T. Hetebrink, his wife Rebecca, and their five children migrated from Hanover, Germany to the United States in 1859. Hetebrink served as a member of the school board (Figure 9).<sup>20</sup>

**Figure 9 Mr. and Mrs. Hetebrink**

Source: Fullerton Public Library, n.d.

In 1874, the Hetebrink family settled in the Placentia District, an area that was later divided between Fullerton and Placentia. After a short-lived dairy farm venture, the family turned to cultivating citrus and walnut groves, staples that came to characterize the region. A fire in the early 1880s destroyed the original Hetebrink house, and Henry T. Hetebrink built the current brick Colonial Revival-style residence in 1886. The house was built using bricks that were produced locally in a kiln near present-day Fullerton College. Around this time, the Hetebrink family began to focus on citrus cultivation, planting hundreds of Valencia orange trees on much of their 160 acres of land. Henry T. Hetebrink passed away in 1906 and Rebecca Hetebrink died in 1912. Three of their five children survived to adulthood: Henry F., John W., and Minnie.<sup>21</sup>

Henry F. and Minnie remained ranchers on their parent's land for several years after their deaths. Henry F. Hetebrink sold much of his land off piecemeal, with his last four acres sold in 1950. Eventually, much of the Hetebrink ranch would be sold to CSUF.

The Hetebrink residence survives in its original location; it is a Colonial Revival-style brick house with a hipped roof (Figure 10). According to documents on file with the City of Fullerton Planning Department, the Hetebrink residence is the only remaining residential brick home from the City's pioneering years, as well as one of the oldest in the County.<sup>22</sup> In 2000, CSUF restored the house at a cost of \$500,000.<sup>23</sup>

**Figure 10 Henry T. Hetebrink House (1886), Surviving Citrus-related Property at CSUF**

Source: Chas Metivier, Orange County Register, n.d.

### *The George G. Golleher Alumni House (Mahr House)*

Extant in its original location, the 1931 Mahr House was originally owned by members of the Hetebrink family. The Spanish Eclectic style home was designed and built for Lottie Hetebrink by Clinton F. Abbott of Pacific Ready-Cut Homes (Figure 11). The permit for the 15-room home was pulled in 1931.

Lottie Hetebrink was the daughter of Fullerton pioneer Diedrich Hetebrink (older brother of Henry T. Hetebrink).<sup>24</sup> She ultimately did not reside in the home, however, and after filing for bankruptcy in 1938, the home was ultimately sold to Andre and Opal Mahr in 1939.<sup>25</sup>

A native of Telluride, Colorado, Andrew Mahr and his family moved to Santa Ana and established a citrus farm. The family resided in the house until 1959, when it was purchased for the CSUF campus.<sup>26</sup> The residence is located in its original location along the eastern boundary of the campus, just south of the intersection of Melody Lane and State College Boulevard.

**Figure 11 Mahr House (1931), Surviving Citrus-related Property at CSUF**

Source: Fullerton Public Library, n.d.

*The Heritage House (Dr. George C. Clark House and Office)*

Constructed in 1896, the Dr. George C. Clark House and Office is a distinctive, intact example of the Eastlake Victorian style architecture in Fullerton. The home was built for Dr. George C. Clark, who served as Fullerton's first physician (Figure 12).<sup>27</sup> According to the City of Fullerton, Clark was instrumental in the 1913 construction of the Fullerton General Hospital.<sup>28</sup> Originally located at 114 North Lemon Street in the original town site, the residence was moved to the CSUF Arboretum in 1972 (Figure 13). The property is listed in the NRHP.

## Early Institutional Development in Fullerton

Institutional development in Fullerton stretches back to the late nineteenth century, when the Fullerton School District was founded in 1888, a year after the city's establishment. Early instruction was held for children of all ages at one building, known as Fullerton School. A photograph from 1899 depicts the early schoolhouse (Figure 14).

The city's first higher education institution, Fullerton College, was founded in 1913 at the bequest of the Fullerton Union High School. The college is one of the oldest continuously operating community colleges in the state.<sup>29</sup> Originally located on the high school campus, the school was run by a "College Department" until 1921, when California legislature permitted the formation of independent junior colleges. The following year, the school's Board of Trustees formed the Fullerton Junior College District. Offering general studies, the school provided a two-year postgraduate degree to residents of the still-largely agrarian community.

**Figure 14 Fullerton School in 1899**

## 3.2 Postwar Boom in Orange County and Fullerton

World War II ushered in a new era of expansion in California. Its training camps, military facilities, and proximity to the Pacific placed the state at a particularly advantageous position for heavy military traffic. Over the course of the war, an estimated seven million soldiers spent time in California.<sup>30</sup> With this influx of west coast attention came a greater emphasis on its industry: during the war Southern California ranked first in the country for aircraft manufacturing.

By the end of the war, the population boom in Southern California had triggered a dire housing shortage. After the war, government officials estimated an immediate need for five million housing units and over 12 million units in the ensuing years.<sup>31</sup> The Federal Housing Administration (FHA)'s mortgage guarantee program put homeownership within reach for many returning veterans and others. The resulting construction boom, throughout Southern California, transformed miles of agricultural or undeveloped land into new housing tracts.

Orange County was no exception in this respect, as acres of citrus groves gave way to new housing tracts.<sup>32</sup> These housing tracts accommodated the rapid influx of new residents. In 1953, the *Independent Press-Telegram* commented on this population and construction expansion, noting that "well-kept residential streets stretch out in every direction in Fullerton, and hundreds of new homes are under construction."<sup>33</sup> Large-scale housing tracts included Orangethorpe Manor with 572 homes and Orangewood Tract No. 2 with 175 homes.<sup>34</sup> In 1954, the Fullerton Grove Tract was completed by Pardee-Philips Construction and architecture firm Jones and Emmons.

Fullerton Heritage has recorded a number of postwar tract homes in the city, identifying the first area for their development as the land east of Lemon Street and west of Woods Avenue. Residences were typically box-shaped residences with few decorative detailing.<sup>35</sup> As families poured into the region, the demand for schools and other public institutions and amenities increased accordingly.

### **Hughes Aircraft in Fullerton**

One major catalyst for the population influx in Fullerton was the establishment of the Hughes Aircraft Ground Systems Group. Founded by pilot and businessman Howard Hughes, the company established a 350-acre complex in the Sunny Hills neighborhood of Fullerton in 1957. The company excelled during the technological advances of the Cold War, and the Fullerton complex specialized in building air defense systems, anti-submarine systems, and battlefield radar. In 1959, the company won a \$400-million contract to develop an air defense system for the North American Treaty Organization. The company became so entwined in the community of Fullerton that Mayor A. Buck Catlin was often caught claiming that "Hughes is Fullerton, and Fullerton is Hughes."<sup>36</sup>

The heyday of the company spanned the 1950s and 1960s, before significant defense cuts in 1970 forced the company to lay-off over a third of its staff. The company eventually closed in 1994. It was later purchased and operated by Raytheon Company. During the height of its activity in Fullerton, the company employed close to 8,000 employees.<sup>37</sup> This large workforce resided in the surrounding city, and as many had families, the city's municipal and educational institutions expanded to meet the increased demand.

### **Institutional Expansion and California State University**

In the postwar period, the educational and institutional expansion mirrored and was driven by this rapid population growth, in Orange County and California (and beyond).

For Fullerton College and the California State University system (as with the University of California system), the postwar years put an increase strain on the already popular schools. In 1944, U.S. President Franklin D. Roosevelt established the Servicemen’s Readjustment Act, commonly known as the G.I. Bill of Rights. One major component of this bill was a stipend for college tuition:

[The bill] gives servicemen and women the opportunity of resuming their education or technical training after discharge, or of taking a refresher or retrainer course, not only without tuition charge up to \$500 per school year, but with the right to receive a monthly living allowance while pursuing their studies.<sup>38</sup>

As a result, thousands of veterans enrolled in higher education programs in California. Four hundred universities and colleges in California were approved for the program, with over fifty percent of veterans attending fifty of the approved schools. Between 1946 and 1947, over 850 veterans attended Fullerton College alone.<sup>39</sup> This influx also affected the California State College System, and additional campuses were established in Sacramento (1947) and Long Beach (1949). The original campus established in Los Angeles in 1882 eventually became University of California at Los Angeles, and a subsequent campus was opened at its current location in 1947.<sup>40</sup>

Yet, despite this rapid expansion, the need for colleges in California continued unabated into the 1950s. Within four years, seven additional California State College campuses were established in the state: Fullerton (1957), Hayward (1957), Stanislaus (1957), San Fernando Valley (1958), Sonoma (1960), San Bernardino (1960), and Dominguez Hills (1960). In 1960, the Donahoe Higher Education Act united the individual California State Colleges. By 1972, the California State University and Colleges system was created, and schools changed their names to include “California State University,” commonly followed by their location. A decade later, the system was formalized into the California State University program that is still in place across the state.<sup>41</sup>

## The Founding of CSUF

Well into the postwar period, Orange County was still home to acres and acres of the citrus groves that had given the County its name. At the same time, Southern California’s population continued to grow exponentially, and the agricultural character of Orange County and Fullerton began to shift and give way to development and residential settlement.

In the case of Orange County State College, at the time of its founding in 1957, the site was still occupied by a series of expansive citrus fields and farms. The 1938 aerial photograph shown in Figure 16, illustrates the extent of these fields, along with several associated buildings and structures. Also shown on the photo (and extant as of 2019) are two residences associated with these early citrus farms: the Henry T. Hetebrink House (constructed in 1886, now known as the Titan House) in the center of campus, and the Mahr House (constructed in 1931, now serving as the Alumni Center), along the campus’s western boundary (Figure 15).

Both residences are extant and known historical resources (and described in more detail below). An additional resource, the Beazeley family’s residence was used as the campus’ first Speech and Hearing Clinic until it was razed in the 1960s.<sup>42</sup>

The site of Orange County State College in eastern Fullerton was chosen from nine other potential locations for the new school. State officials recognized the area as an ideal location to accommodate the influx of college-seeking adults in Orange County. Because the acquisition of the proposed 252-acre campus was costly, the land was purchased in three phases. In November 1958, legislature approved purchase of the first 160 acres of land for the school.<sup>43</sup> An additional 77 acres were

approved the following year in July 1959.<sup>44</sup> A final land acquisition of approximately 15 acres was completed in 1960.<sup>45</sup>

The nine owners of the 252-acre campus were compensated for their land.<sup>46</sup> Most landowners were agricultural farmers who owned and operated citrus enterprises prior to development, as shown in the prominent agricultural fields from aerials of the period (Figure 16). With the campus' land purchased, the school anticipated an immediate demand for classes and sought to establish temporary quarters for students and teachers while permanent buildings were under construction. From 1959 until 1961, classes were held in rented quarters at the Sunny Hills High School. In 1960, a series of temporary, one-story buildings were added along the western portion of the campus; the buildings were constructed by Allison Honor Company of Santa Ana.<sup>47</sup>

In January of 1959, William B. Langsdorf was named president of the school. Langsdorf studied at Occidental College, received a Ph.D. from University of California, Berkeley, and served as the president of Pasadena City College.<sup>48</sup> He was sworn into the position on March 1<sup>st</sup> of that year. Under Langsdorf's guidance, the college sought to provide training for in-demand jobs by creating specialized education tracts for elementary school teachers, business administration majors, secondary school teachers, and electronic engineers.<sup>49</sup>

The heart of the CSUF campus was developed and constructed through three principal master planning efforts: Phase 1 (1960), Phase 2 (1962), and Phase 3 (1974). The following sections outline a general construction chronology for CSUF, by master planning efforts.

## Phase 1: 1960 Master Plan, 1960-1969

As construction began in earnest, development of the campus began in the southern region of the site, accessible via Nutwood Avenue. Milton C. Blanchard and Dean Stuart F. McComb developed the college's building program, which by 1961 included an \$80 million master plan.<sup>50,51</sup> The plan covered a 20-year period from 1960 to 1980 and sought to make the fledgling school one of the state's top educational institutions. Thirty-five baccalaureate and 24 postgraduate degrees were planned for a student body of 20,000 and a faculty of 1,000 full-time instructors.

The 1960 Master Plan, included below, called for the construction of 6 buildings: Letters and Sciences (1963), Music-Speech-Drama (1965), Physical Education and Gymnasium (1965), Library (1966), Cafeteria-Commons (1967), and Humanities and Social Sciences (1969; Figure 17).

Created as part of the first major building campaign at CSUF, the buildings display a unified site plan, with each component arranged around a central quad and commons. Unified by axial circulation corridors and landscaping, the early campus core was completed between 1963 and 1969. This early development is visible in the 1963 historic aerial which shows the construction of the Letters and Science Building (now McCarthy Hall) and portable buildings along the western extent of the land acquired. Much of the campus was still planted with citrus trees at this time (Figure 18).

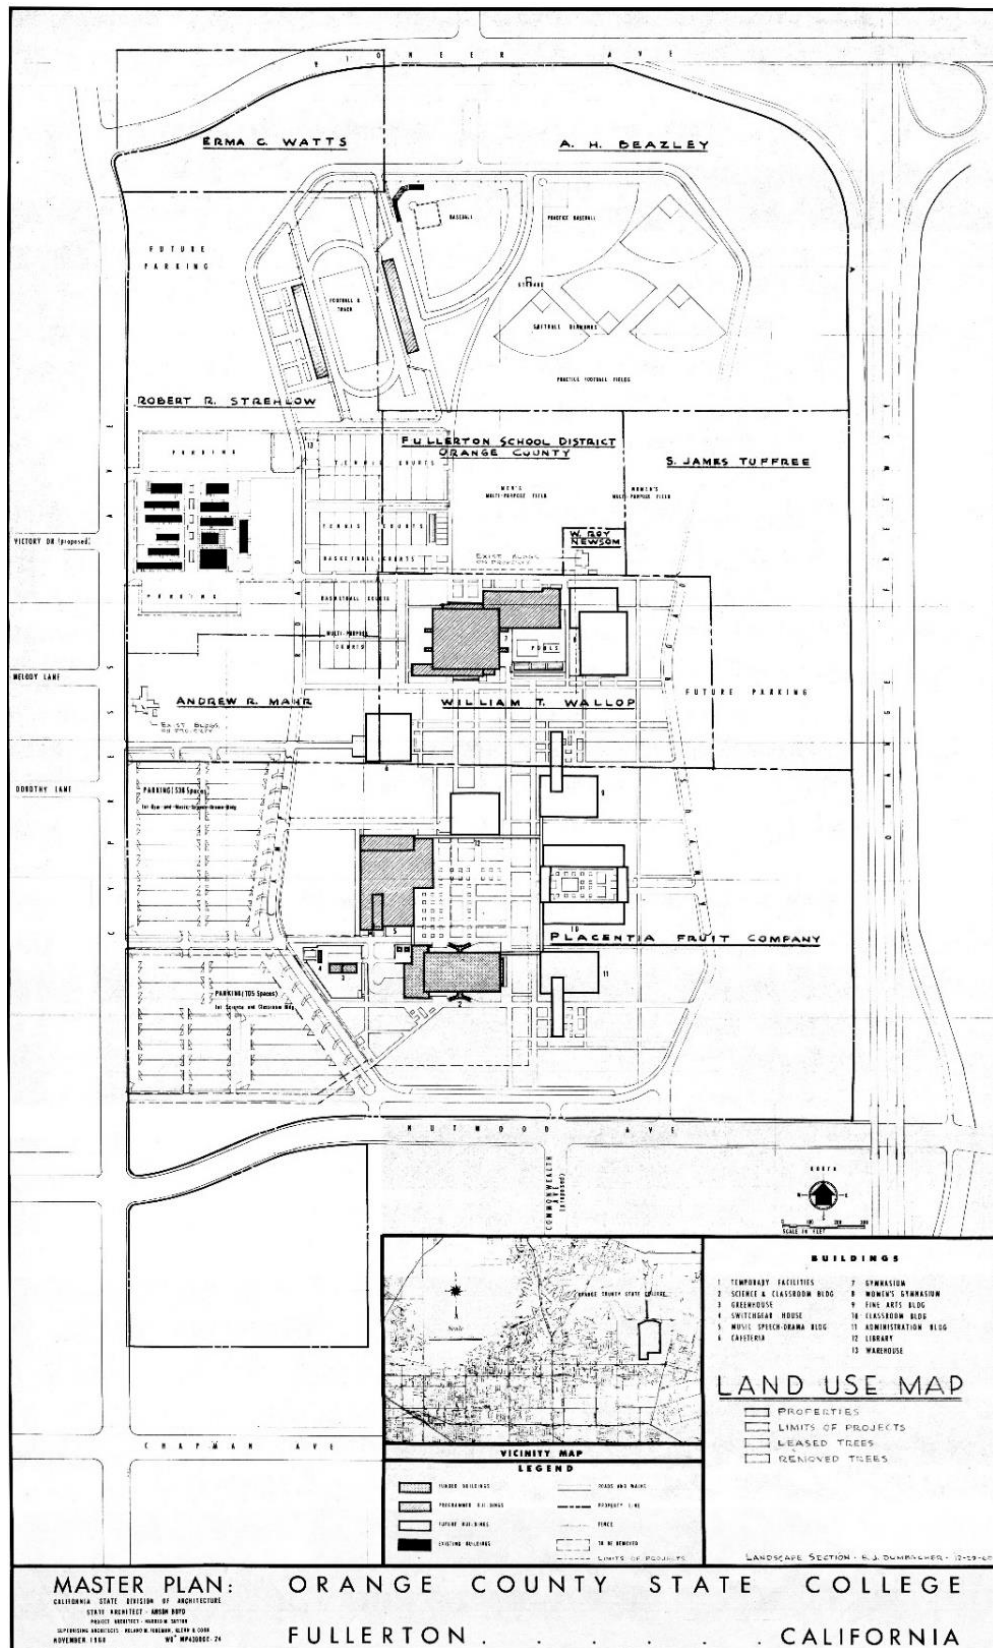

Milton C. Blanchard and Dean Stuart F. McComb developed the college's building program, which by 1961 included an \$80 million master plan.<sup>52,53</sup> The plan covered a 20-year period from 1960 to 1980 and sought to make the fledgling school one of the state's top educational institutions.

A 1959 rendering of the campus portrays the initial, planned design of the campus as well as the originally constructed facilities. The central quad with its circulation corridors, Letters and Science Building, Music-Speech-Drama Building, and Physical Education and Gymnasium Building were all completed on the campus (Figure 19).

In 1966, the *Los Angeles Times* reported that "the hub of the layout [was] the mall starting at the south edge of the campus and heading north past the library, through the student center and winding up at the physical education building."<sup>54</sup> This central region serves as the historic core of the campus.

A "birds-eye view" of the campus from 1966 shows the spatial relationship of the first four buildings constructed: the Letters and Science Building (1), Music-Speech-Drama Building (2), Physical Education and Gymnasium Building (3), and Library (4). It also shows the locations of the planned Visual Arts Building (A), Cafeteria-Commons Building (B), and Humanities and Social Sciences Building (C; Figure 20).<sup>55</sup> Although the 1960 Master Plan called for a Visual Arts Building, the design and location of the building evolved from the design stages to construction.

### *Letters and Science Building (McCarthy Hall)*

The first permanent building, the \$11 million Letters and Science Building (now McCarthy Hall) was completed in 1963 by construction firms Kemp Brothers and George Thompson, both of Los Angeles.<sup>56</sup> It was lauded as the largest building in the nation devoted to science classes at the time. The building was an engineering feat for the campus; the 75-ton tower crane used to construct it was so large that a special railroad was constructed to transport it to the site. The crane was capable of lifting 12- to 15-ton concrete panels for the six-story building.<sup>57</sup>

In May 1962, Governor Pat Brown dedicated the building while campaigning in Orange County.<sup>58</sup> A rendering of the Letters and Science Building was used in an advertisement for single-family residences planned around the campus (Figure 21).<sup>59</sup> Upon the building's dedication on October 11, 1963, a time capsule was incorporated into the base of the building.<sup>60</sup> An aerial of the campus at this date evidences the building's progress (Figure 22). The basement of the building was constructed as a nuclear fallout shelter and housed the school's library prior to the completion of the Pollak Library.<sup>61</sup>

In 1984, the building was renamed the Miles D. McCarthy Hall (McCarthy Hall). A professor of biology, McCarthy was a founding faculty member at CSUF and served as an acting president in 1981.

**Figure 21 Rendering of the Letters and Science Building**

Source: Los Angeles Times, 1961

**Figure 22 Aerial Showing Construction of Letters and Science Building**

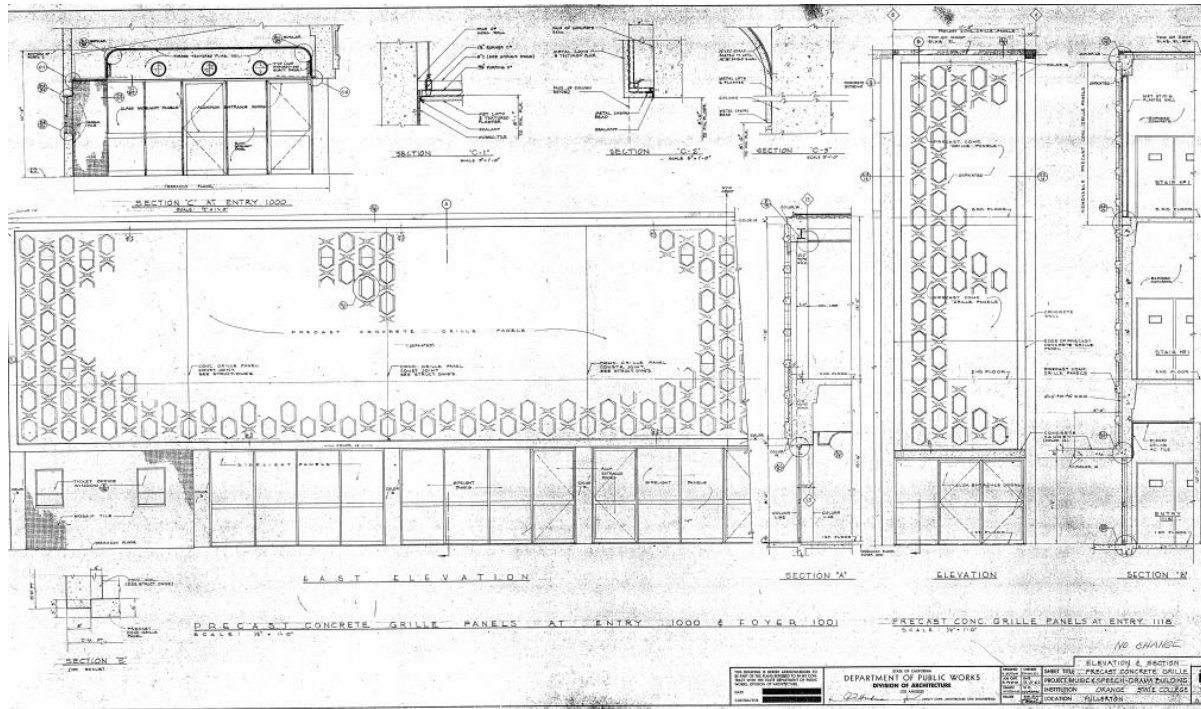

Source: Fullerton Public Library, 1963

### *Music-Speech-Drama Building (Clayes Performing Arts Center)*

The Music-Speech-Drama Building (now Clayes Performing Arts Center) was the campus' second permanent building. Construction began in 1963 and was completed by January 10, 1965 by R. J. Daum Construction Company of Gardena. Building plans for the Music-Speech-Drama Building evidence its early design (Figure 23).

The approximately \$4-million building included a 500-seat theater, 200-seat recital hall, costume dressing room, speech and hearing clinic, and radio-TV studios; amenities included air-conditioning and two passenger elevators.<sup>62</sup> It was capable of accommodating over 2,500 students. The building was substantially updated and altered in 2000, when an estimated \$43 million expansion project was completed.<sup>63</sup>

**Figure 23 East Elevation, Building Plans for Music-Speech-Drama Building**

Source: California State University, Fullerton, 1962

*Physical Education and Gymnasium Building (Titan Gymnasium/Kinesiology & Health Science Building)*

In 1964, J. B. Allen Company of Anaheim won the bid to construct the school's third building, the Physical Education and Gymnasium Building.<sup>64</sup> The building was designed to seat 3,000 people and accommodate an additional 2,000 more seats when required. A 5,000-square-foot handball court was also part of the contract.<sup>65</sup> The building was completed in 1965. In 1967, two additional pool buildings were completed, forming a three-building complex.

The Physical Education and Gymnasium Building is situated due north of the Letters and Science Building, creating a north-south orientation on the campus quad that was further emphasized with the construction of the library (Figure 24).

**Figure 24 Physical Education and Gymnasium Building**

Source: Fullerton Public Library, n.d.

### *Library (Pollak Library)*

Plans for the Library, the fourth permanent building, were approved in 1963. According to a press release from that year, the library was intended to “form the nucleus around which the 235-acre campus [was] planned.”<sup>66</sup> Architects for the project were Risley, Gould & Van Heuklyn and the building was constructed by J. B. Allen & Co. In 1965, the building was described as “window-wrapped”:

The 220,000-square-foot structure features a ground floor of solid windows topped by five window-less floors. On each floor precast concrete panels give a window-like effect and repeat the motif of the new music-speech-drama building nearby.<sup>67</sup>

A 1963 artistic rendering of the building illustrates these strong geometries (Figure 25).<sup>68</sup> Landscaping for the campus’ quad was complex, and included unifying circulation corridors and round planters arranged in geometric designs. The landscaping further emphasizes the connected nature of these four original buildings, and their shared spatial relationship. An aerial from 1967 shows the development of the campus, and the establishment of the historic core (Figure 26).

**Figure 25 Rendering of the Library**

Source: Los Angeles Times, 1963

**Figure 26 1967 Aerial Photograph of Campus**

Source: Fullerton Public Library, 1967

### *Cafeteria-Commons (Book Store/Titan Shop)*

The Cafeteria-Commons Building was the fifth permanent building completed on the campus. Constructed by R. J. Daum Construction Company of Gardena, the 40,000-square-foot 2-story “modernistic” Cafeteria-Commons Building cost approximately \$1.1 million and was completed a month ahead of schedule in August 1967.<sup>69,70</sup>

The building was designed to be easily expandable. It currently serves as the Book Store/Titan Shop. The building was converted to the Book Store and shop at an unknown date but retains many of the design features from its early construction (Figure 27).

**Figure 27 Cafeteria-Commons Building**

Source: Los Angeles Times, 1967

### *Humanities and Social Sciences Building*

The 8-story, 144,900-square-foot Humanities and Social Sciences Building was designed by Thornton Abell and constructed by James I. Barnes Construction Company.<sup>71</sup> Construction of the building was underway by 1967 and completed in 1969.<sup>72</sup>

Upon completion, the building was described as a “shimmering eight-story alabaster... building ready for full time use.”<sup>73</sup> It featured six floors for academic classrooms and two floors for faculty offices. A photograph of the completed building in a *Los Angeles Times* article from 1969 illustrates the building’s distinctive New Formalist/Late Modern architectural detailing. The photograph also connects the area’s agricultural history with its modern building program; a Valencia Orange tree

branch in the upper corner of the image serves as a clear reminder of the citrus fields that once occupied the area (Figure 28).<sup>74</sup>

**Figure 28 Humanities and Social Sciences Building**

Source: Los Angeles Times, 1969

**CSUF's Early Years and the Elephant Races**

In these early years, CSUF launched an event that became defining for the campus. On May 11, 1962, the school celebrated the “Day of the Titan,” which featured the first intercollegiate elephant race. The elephant races were an important part of CSUF’s early history and led to the adoption of the elephant as the school’s mascot. Ten universities from around the country were invited to complete (Figure 29). According to one account:

True to the finest traditions of elephant racing, over 10,000 fans jammed the infant Orange County State College campus Friday in Fullerton to witness “the first intercollegiate elephant race in human history.” Modoc, Long Beach State College’s speedy four-ton pachyderm turned the event into near chaos when she decided to get away from it all and return to her pen-running and bellowing through frightened and screaming, but uninjured spectators. Before she went wild, however, Modoc took first place in the varsity 95-yard elephant run with a record setting 23 seconds performance.<sup>75</sup>

**Figure 29 Sigma Phi Elephant, Elephant Races in 1962**

Source: Tessa Digital Collections, Los Angeles Public Library, 1962

Participants lured the baby animals across a cornfield dubbed “Dumbo Downs,” using giant bottles of milk (Figure 30). The televised event was widely popular and in 1966 the student government named the school’s elephant mascot “Tuffy the Titan.”<sup>76</sup>

**Figure 30 Elephant Being Lured Forward by Milk, Elephant Races in 1962**

Source: Tessa Digital Collections, Los Angeles Public Library, 1962

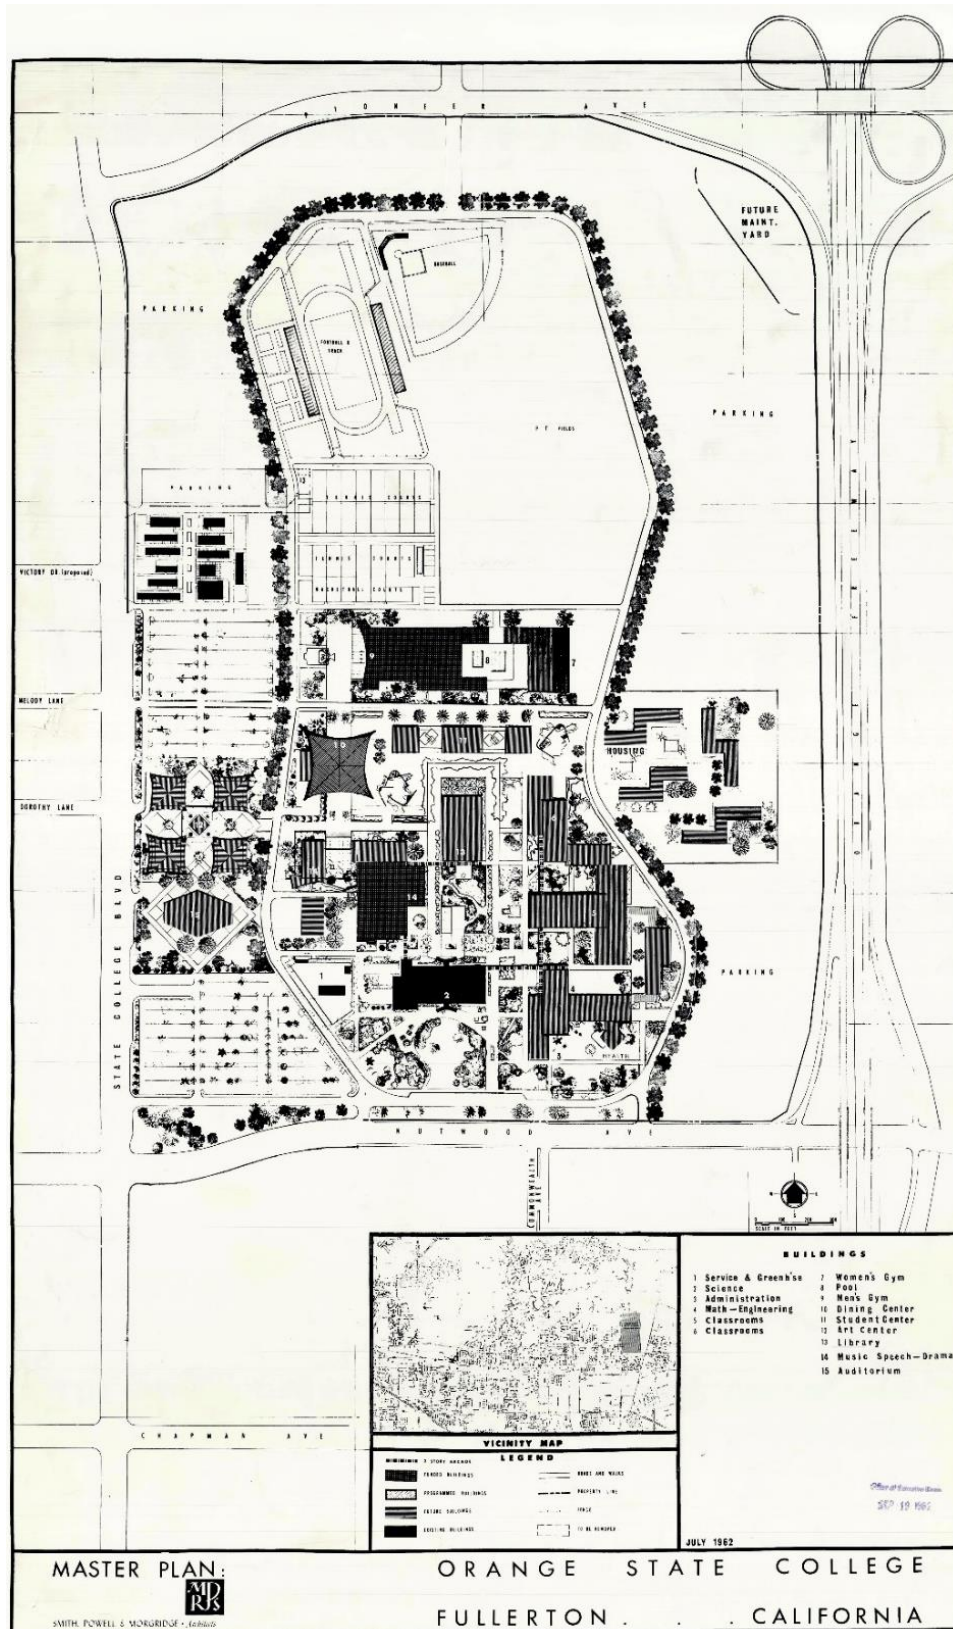

## **Phase 2: 1962 Master Plan, 1969-1974**

By 1968, the college had reached over half of their expected enrollment, with 10,750 students enrolled for the fall semester. A year later, that number increased to 12,793 students occupying the “sprawling high-rise-style campus.”<sup>77</sup> At this point, the CSUF was able to implement additional components of the 1960 to 1962 Master Plans.

Although an administration building and art building were identified in the 1960 Master Plan, their designs and locations were updated in the 1962 Master Plan. Buildings constructed during this second phase include the Visual Arts Building (1969), Engineering Building (1971), Administration Building (1971) and Health Center (1974; Figure 31).

As visible in a 1972 aerial, the unified, axial site plan of the campus was already intact by the early 1970s, with administrative and academic buildings located in the south of the campus and athletic fields in the northern extent of the campus (Figure 32). The 1972 aerial illustrates a cohesive site plan, accompanying landscape design, and circulation corridors throughout campus. Much of the peripheral land to this central core was used for parking lots; athletic fields were completed in the northern portion of the campus.

Figure 31 1962 Master Plan

Source: California State University, Fullerton, 1962

Figure 32 1972 Aerial Photograph

Source: Environmental Data Resources, 2019

The second phase of development mirrored and expanded the original historic core. Overall, buildings completed in the early 1970s were organized around the existing core and shared the aesthetic principals and design characteristics of the first six buildings. A rendering of the campus illustrates the general contours of the plan (Figure 33).

**Figure 33 Artist Rendering of the Campus**

Source: Artist Rendering Courtesy of Orange County Archives, n.d.

### *Visual Arts Building*

Architect Thornton Abell designed the Visual Arts Building, the seventh permanent structure on the campus, in 1967. The complex of single-story wings surrounding a two-story building was completed in 1969 (Figure 34).<sup>78,79</sup> It consists of six principal components designed in a modular, Mid-Century Modern architectural style (instead of the monumental-scale, symmetrical New Formalism that characterized earlier buildings). Instead of the repeating geometries, and emphasis on monumentality, the Visual Arts Building is a pedestrian-scaled complex connected by sheltered arcades. Aesthetic effect is derived through a simple, modular design composition, with an overall lack of ornament and emphasis on the horizontal axis. Landscaping and site details include two decorative water features/sculptures near the western and eastern areas of the complex.

Upon its opening in 1970, the *Los Angeles Times* proclaimed the complex an “oasis” where the CSUF art department could settle; art exhibitions were immediately opened in the space.<sup>80</sup>

**Figure 34 Rendering of the Visual Arts Building**

Source: Los Angeles Times, 1966

*Administration Building (Langsdorf Hall)*

The 9-story Administration Building was slated for construction in 1968-1969.<sup>81</sup> The building was designed by architecture firms William E. Blurock & Partners of Corona del Mar and Back, Hutchason & Perkins of Los Angeles.<sup>82</sup> James I. Barnes Construction Company of Claremont served as the contractor.<sup>83</sup> It was completed in 1970 and renamed in 1974 as William B. Langsdorf Hall (Langsdorf Hall), in honor of the campus' founding president (Figure 35).<sup>84</sup>

**Figure 35 Administration Building**

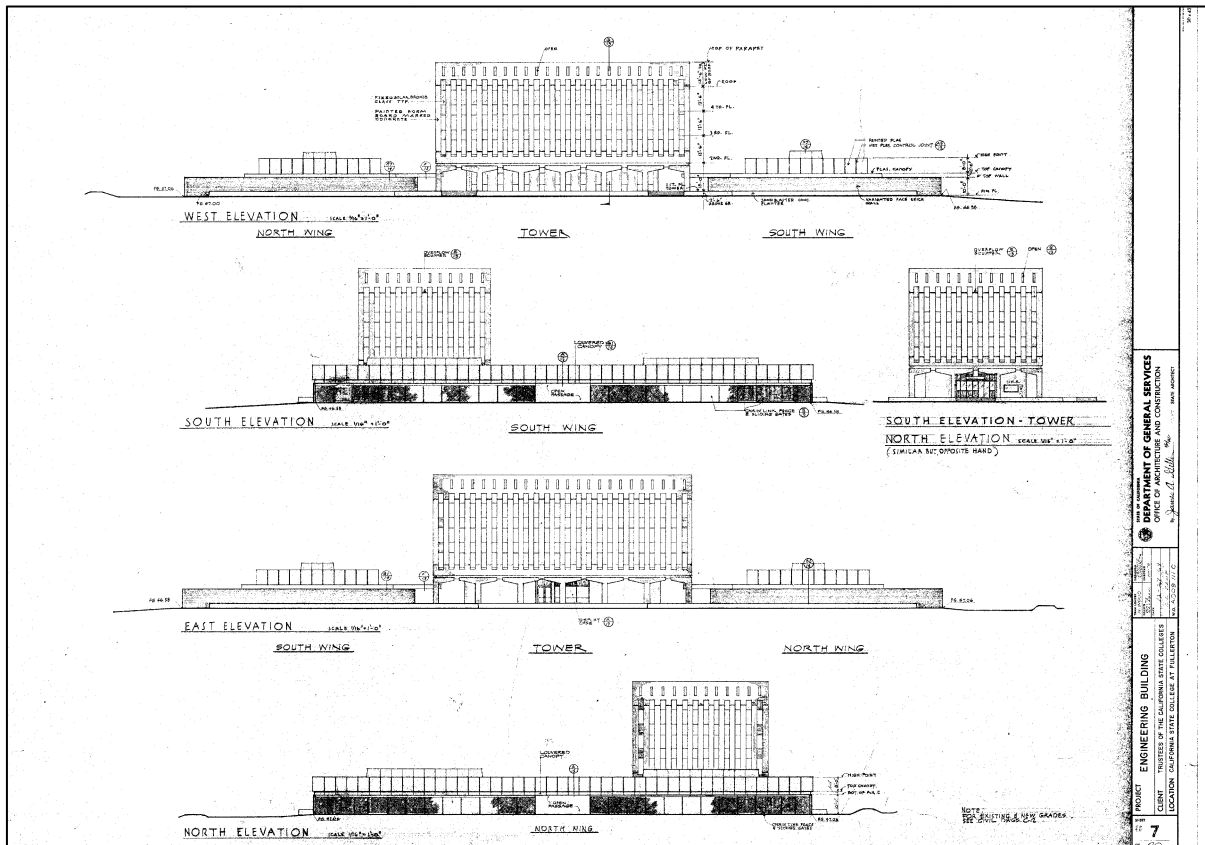

Source: Fullerton Public Library, n.d.

*Engineering Building (Engineering and Computer Sciences Building Complex)*

The Engineering Building Complex was originally intended to sit in the front of the campus according to early Master Plans. In 1967, executive dean Stuart McComb and trustees of the state colleges approved shifting the building to the eastern portion of the campus at a site previously set aside for student housing.<sup>85</sup> Tutor-Myers Company of North Hollywood was awarded the contract for construction of the building.<sup>86</sup> A 1967 article records the same architect “working on schematic plants for the engineering and administration-business building” (i.e., William E. Blurock & Partners and Balch, Hutchason & Perkins).<sup>87</sup>

In 1970, groundbreaking was held for the \$3.4-million Engineering Building.<sup>88</sup> The building originally featured four 1-story satellite laboratories and a single one-story tower forming a U-shaped complex with a central court area. The five-building complex was completed in 1971 (Figure 36). The sixth, easternmost building in the complex was built in 1988.

**Figure 36 North and South Elevations, Building Plans for Engineering Building Complex**

Source: California State University, Fullerton, 1968

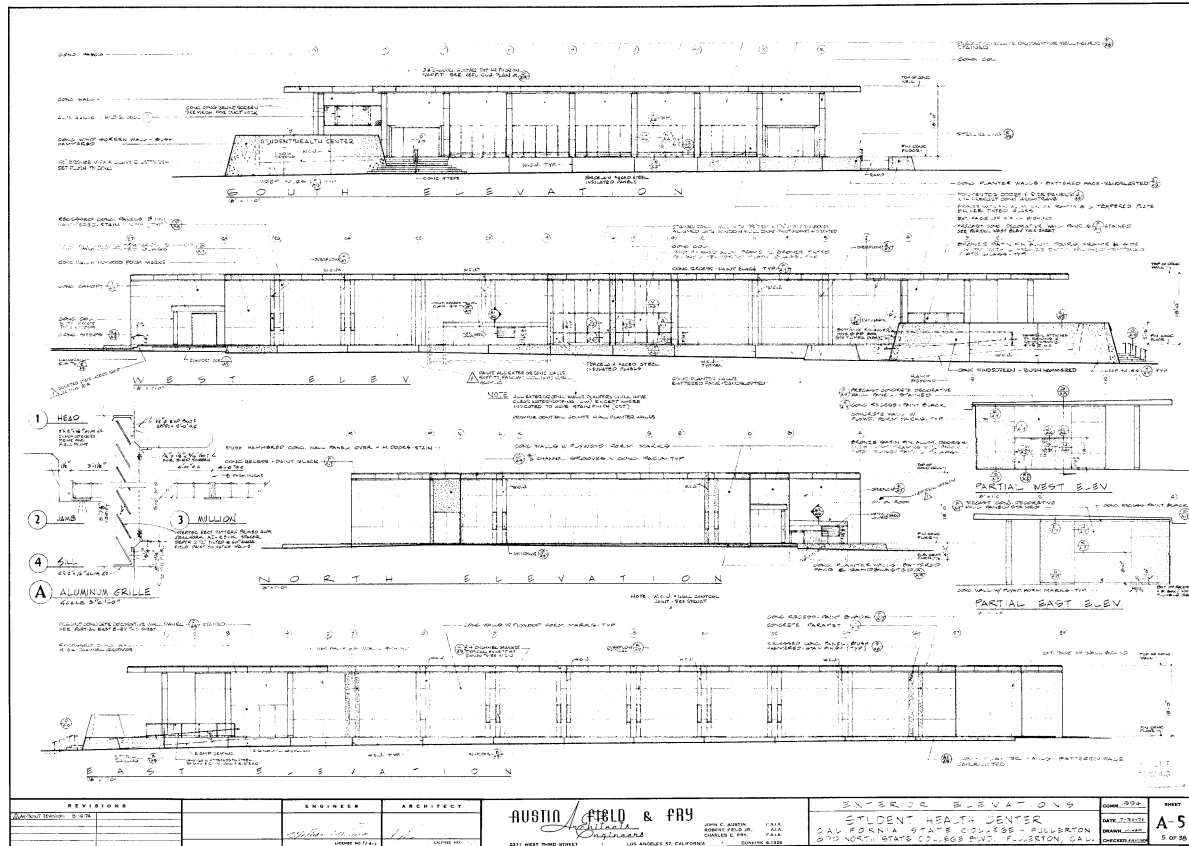

*Health Center (Student Health & Counseling Center)*

Construction of the health center was awarded in 1972 to Mallcraft, Inc., based in Thousand Oaks. Costing \$1.22 million, the Health Center was the first building on campus to be funded from revenue bonds issued by the trustees of the California State University and Colleges (Figure 37).<sup>89</sup> It was completed in 1974.

Although somewhat separated from the original quad, the Health Center continues many of the architectural themes and motifs seen in early building phases of the campus. The building combines

the ideas of New Formalism (with the emphasis on symmetry and a muted classical vocabulary) with those of Mid-Century Modern design (with a lower, more pedestrian-scaled mass and emphasis on the horizontal axis). Directly to the south, the building faces an expansive lawn area with mature trees.

## CSUF and the Civil Rights Movement: The “People versus Ronald Reagan”

Toward the conclusion of CSUF’s first decade, the era of civil rights arrived on campus. Throughout the 1960s and 1970s, American universities were often the site of student protests. According to English professor Cyril (Cy) Epstein, who wrote a book on the 1970 protest, CSUF was initially not among these campuses, as the school was “considered by most to be a more ‘responsible’ campus, if not exemplary... it was certainly located in the heart of Reagan territory.”<sup>90</sup>

The initial impetus for the 1970 protest was a speech given by then-Governor Ronald Reagan at the campus in February. During the address, Reagan was heckled by students who, unbeknownst to them, were being recorded by the Fullerton Police Department. Within a week of the event, two of the protestors, Bruce Church and David MacKowiak, were arrested by the police. Alarmed by this, many students objected, asserting that the two students were being penalized for exercising their right to free speech. The two students were also accused of misconduct by CSUF, further heightening tensions.<sup>91</sup> The student body’s initial dissent was limited to protests in McCarthy Hall and the President’s office.<sup>92</sup>

On March 3, student activists broke into the Judicial Board hearing for Church and MacKowiak, then marched to the campus quad to stage a protest. Administrators called the Fullerton Police to the campus, which enraged students.<sup>93</sup> After police's call for disbandment was ignored, officers turned to more violent methods to disperse the mob. Police used force to attempt to disperse students and faculty, and ultimately arrested seventeen students and two faculty members. According to an information sheet recounting the events, one professor was "clubbed unconscious and brutally hurled head first into the police prisoner van" and two female students "were handcuffed behind their backs, were bleeding at the wrists, and were dragged by their hair across the concrete," while 1,500 students watched and protested the treatment.<sup>94</sup> This violence compelled faculty to plant themselves between the student protesters and police, and the police eventually left the campus.

By mid-April tension again rose with the publication of a 32-page book titled "The People Versus Ronald Reagan." This pictorial history contained numerous photographs from the March 3<sup>rd</sup> protest as well as pictures of nude students. Profits were intended to fund Church and MacKowiak's legal defense. This book, determined obscene by the district attorney, was but one part of a larger pattern unfolding in the spring of 1970.

Political unrest exploded at CSUF in response to Nixon's declaration of the invasion of Cambodia and the Kent State shootings. Reacting to these events, Reagan shut down all University of California and state colleges for four days. In protest, students occupied the Performing Arts Building. According to historian and CSUF professor Larry de Graaf, "a conservative governor had unwittingly succeeded in transforming CSUF from the pursuits of learning into a center for antiwar activities in Orange County."<sup>95</sup>

The repercussions of the protests were multifold: CSUF established itself as a location for political and social activism. By the end of spring semester 1970, as students returned home for the summer, the school slowly calmed from the wave of riots. A photograph from 1970 shows the protests that wracked the campus. Students with signs and flags, Langsdorf and McCarthy Halls, and a police presence are all visible in the image (Figure 38).

### **Phase 3: 1974 Master Plan, 1974-1975**

During the 1970s, one of the principal development projects was creation of an arboretum, as shown on the 1974 Master Plan (Figure 39). As was the 1967 Master Plan, the 1974 Master Plan was designed by the well-known architectural firm of Powell, Morgridge, Richards & Coghlan.

The timing of this Master Plan coincided with Fullerton's growth as a college city, partially because of CSUF. In 1973, the *Los Angeles Times* estimated that 40,000 students attended college in Fullerton; and school officials asserted that "the area surrounding Cal State is rapidly becoming one of the foremost educational centers in Southern California."<sup>96</sup>

Figure 39 1974 Master Plan

Source: California State University, Fullerton, 1974

### *Titan Hall*

One outlier from the Master Plans is Titan Hall, which was constructed in 1974 for the Western State University College of Law. This 54,000-square-foot, four-story building was designed by architectural firm George T. Nowak and Associates of Los Angeles in 1972.<sup>97</sup>

In 1973, the commission earned its designers an award from the American Registered Architects.<sup>98</sup> The college occupied approximately four acres at the time of its opening and was located adjacent to Troy High School and CSUF.

In 2012, Western State University College of Law moved to the California State University, Irvine campus and CSUF purchased the subject building.<sup>99</sup>

**Figure 40 View of Titan Hall, Previously Part of Western State University College of Law**

### *Arboretum*

Prior to the development of the Arboretum in the 1970s, the northern expanse of CSUF was a largely unoccupied field scattered with citrus trees. After learning that the area was slated to become another parking lot, staff and students had the idea to transform the space into a botanical garden. According to a 1972 newspaper article, the project was led by students who proposed “to turn a dead orange grove...into Orange County’s first arboretum, an ‘ecological preserve’ complete with streams and ponds, greenery and wildlife.”<sup>100</sup> This effort on the part of students was successful, and the arboretum was incorporated into the school’s master plan in 1972.

The 25-acre swath of natural and manicured land was intended to offer “the university and surrounding communities an oasis of recreational, historical, and educational value” and include 17 acres of contoured arboretum, four acres of organic gardens, and a four-acre experimental plot.<sup>101</sup>

In 1972, an Eastlake Victorian-style residence threatened with demolition in downtown Fullerton was moved to the still-in-progress arboretum. This 1894 residence was originally built by the city’s pioneering Dr. George Crook Clark who resided at the residence until the early 20<sup>th</sup> century. The salvaged house was relocated to serve as the headquarters for the Arboretum. The roof was removed during relocation and subsequently reconstructed to match the original design.

In 1976, the house was renamed the “Heritage House,” marking the first stage of the Arboretum’s development. A photograph of the arboretum shortly after the house’s relocation shows Dr. C. Eugene Jones, botany Instructor (left) and James C. Sharp, who was head of the campus planning committee (right), in front of the Heritage House (Figure 41).<sup>102</sup> Landscaping surrounding the residence was completed by Landscape Architect Myrton Purkiss.<sup>103</sup>

**Figure 41 Heritage House Dedication**

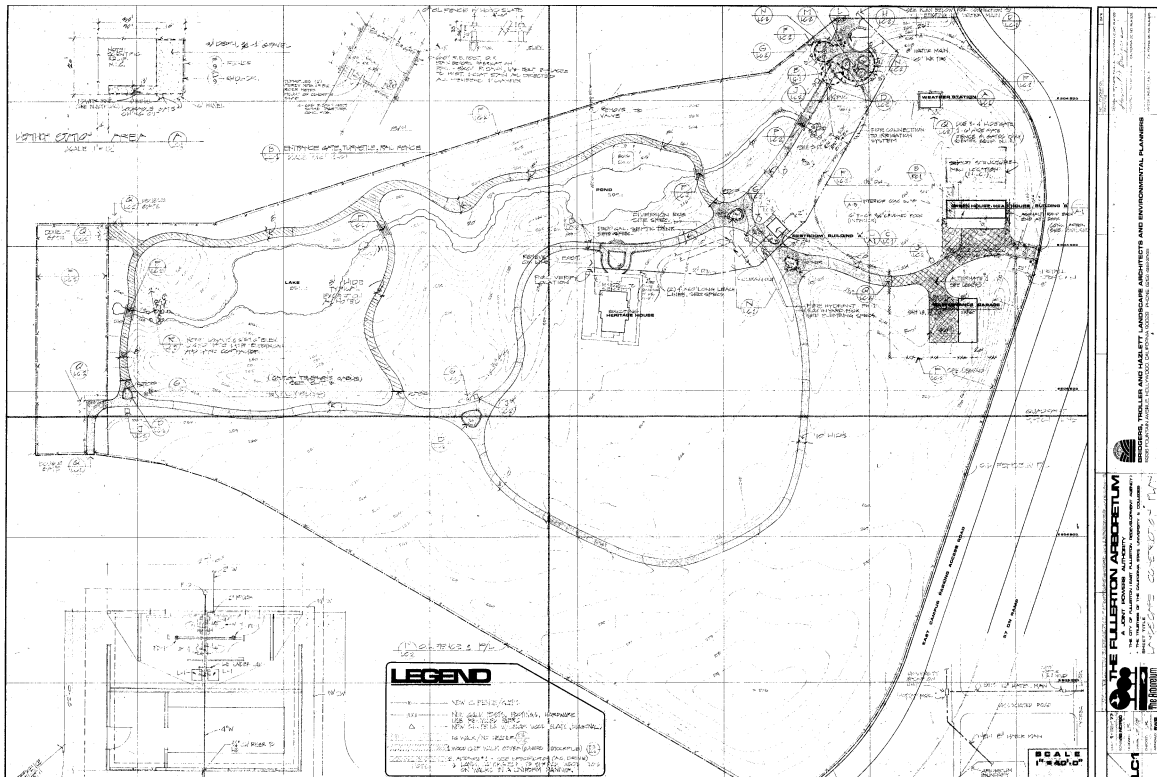

Source: Los Angeles Times, 1976

Originally, plans for the arboretum’s larger design were completed by students at Cal Poly Pomona. After the initial planning phase, the City of Fullerton and University trustees hired landscape architecture firm Bridgers, Troller, and Hazlett to complete schematic drawings, and contractors Goodman and Pelogran to construct the arboretum in 1977 (Figure 42). The firm created an organic

network of ambulatory paths that weave between the natural and designed features of the Arboretum, from the Heritage House to the citrus trees on the property.

Samuel Bridgers and Howard Troller had previously worked on the landscaping for the main quad with Ralph Cornell. Jere Hazlett joined the firm shortly after they completed the landscape. After Cornell's death, the firm was again contracted by CSUF for the arboretum's landscaping project. The Arboretum was completed and dedicated in 1979.<sup>104</sup>

**Figure 42 Arboretum Landscaping Plan**

### Post-1975 Expansion

While outside of the survey area (which includes buildings/structures, historic districts, and cultural landscapes 45 years of age and older), this section details some of the major initiatives to expand the CSUF campus after 1975.

As shown on a 1977 aerial, CSUF's northeastern corner became home to the arboretum, completed in 1979. This area consists of vegetation and winding paths that bisect the various gardens (Figure 43). By the 1980s and 1990s, as the campus expanded, new buildings were constructed primarily on the periphery of the central quad. Housing was constructed in the 1990s along the eastern border of the campus whereas permanent and portable academic buildings essentially "filled in" the periphery of the campus (Figure 44). Parking lots, and later parking structures in the 2000s, were also relegated to the edges of the campus.

In subsequent years, the campus continued to expand and include areas south of Nutwood, west of Stage College, and north of Yorba Linda.

## 4 Associated Architectural Styles, Architects, and Design Professionals

---

### 4.1 Architectural Styles

#### **New Formalism**

Emerging in the mid-1950s, New Formalism represented a return to monumentality, symmetry, and historicism in architectural design. Championed by architects such as Edward Durell Stone, New Formalism was a form of Late Modern architecture that became popular through the 1960s. The style proved particularly popular for larger-scale institutional buildings that were not well suited to the low-slung, post-and-beam vocabulary that characterized Mid-Century Modernism.<sup>105</sup>

Aesthetically, New Formalism referenced Classical architecture, but in an abstracted manner. In this way, New Formalism represented a streamlined, Modern version of historical styles and scale.

As numerous architects in Southern California (and beyond) adopted the style, New Formalism became the preferred style for numerous civic, religious, educational, and private institutions including city halls, auditoriums, churches, and banks. Local practitioners who became known for their New Formalist designs include A. Quincy Jones, Philip Johnson, Skidmore Owings & Merrill, Millard Sheets, William Pereira, and Edward Durell Stone.<sup>106,107</sup> Typical character-defining features of the style include:

- Symmetrical plan and façade
- Flat roofline with prominent, overhanging eaves and cornices and broad fascia
- Emphasis on clean geometries and singular volume
- Use of travertine, cast stone, marble and/or concrete
- Smooth wall surfaces
- Large screens of perforated concrete, concrete block or metal panels
- Colonnades, plazas, or elevated podiums; use of full-height columns or pilasters
- Stylized entablatures

At CSUF, many buildings reflect the New Formalist style. These include:

- McCarthy Hall
- Claves Performing Arts Center
- Titan Gymnasium
- Pollak Library
- Titan Shop/ Book Store
- Humanities and Social Sciences Building
- Langsdorf Hall
- Engineering and Computer Sciences Building Complex
- Titan Hall

## Brutalism

Brutalism is a style of architecture characterized by its heavy, block-like forms and use of unfinished concrete. The style was established by British architects Alison and Peter Smithson in the 1950s and derives its name from the French words *béton brut*, or “raw concrete.” Brutalism lacks applied ornament, relying for aesthetic effect instead on the interplay of geometric forms and massing.

First introduced in United States in the 1960s, Southern Californian architects that employed the style included William Pereira, A. Quincy Jones, A.C. Martin & Associates, Welton Becket, and Skidmore Owings & Merrill.<sup>108,109</sup> During the style’s period of popularity it was most frequently applied to governmental, financial, and educational buildings. The style’s embrace of monumental forms and scale made it well-suited for educational facilities during this period.

Brutalism’s character-defining features include:

- Exposed poured/cast concrete construction
- Repeating modular elements
- Heavy, block-like volumes
- Emphasis on monumental scale and massing
- Windows as voids
- Emphasis on base/platform of building

Although most of the buildings at CSUF are designed in the New Formalist style of architecture, the Titan Shop/Book Store also shares traits with Brutalism.

## Mid-Century Modernism

The broad category known as Mid-Century Modernism includes a range of styles and approaches, from the machine-age aesthetic of the International Style to the organic, regionally inflected modernism of Frank Lloyd Wright. The Modern movement in architecture represented a break from period revivalism and an approach that emphasized style over function. Although the origins were in the 1920s, Mid-Century Modernism emerged in earnest during the building boom of the post-World War II era. More of an architectural vocabulary than a style, the various strains of Mid-Century Modernism became the norm throughout the United States, with Southern California being a well-known center for regional modernism. By the 1950s, numerous architects had become recognized practitioners of the style; they included Buff, Straub and Hensman, Smith & Williams, Thornton Ladd, Thornton Abell, Gregory Ain, Richard Neutra, Welton Becket, A. Quincy Jones, John Lautner, and Raphael Soriano, among many others.

Mid-Century Modernism emphasized functionality and workmanship, with high-quality materials simply treated, as well as indoor-outdoor integration through the use of adjacent patios, low door thresholds, generous expanses of full-height windows. Post-and-beam construction, often realized in wood or, less often in Southern California, steel, is a typical component of Mid-Century Modernism. These buildings often have wide, cantilevered eaves, balanced on contrastingly thin spider-leg or post supports.<sup>110</sup> When applied to educational facilities, Mid-Century Modern design often featured sheltered arcades, which served to move hallways outdoors and unify the buildings of the campus.

Mid-Century Modernism’s character-defining features include:

- Low, modular design

- Asymmetrical but balanced design composition, with simple, geometric volumes
- Emphasis on functionality and plan
- Exposed structural supports and materials
- Ample fenestration; natural light
- Open floor plans
- Post-and-beam construction

The Visual Arts Building Complex is designed in the Mid-Century Modern style of architecture at CSUF.

## 4.2 Architects

### **Risley, Gould & Van Heuklyn**

The firm of Risley, Gould & Van Heuklyn was responsible for the design of the Pollak Library at CSUF. Originally Risley & Gould, the firm was founded by Stanley Gould and Winchton Risley in 1948. Van Heuklyn joined the firm as a draftsman in 1952 and became an associate in 1954. The firm changed its name to Risley, Gould & Van Heuklyn in 1962.<sup>111</sup>

Risley, Gould & Van Heuklyn was very active in Southern California and specialized in campus design for primary and secondary schools as well as colleges and universities. Perhaps the most notable comprehensive project that the firm completed was for the University of California, San Diego (UCSD) campus. At UCSD, Risley, Gould & Van Heuklyn designed numerous educational facilities including the Scripps Institution of Oceanography; the Center for Coastal Studies; and the Bonner, Mayer, and Urey Halls. Additionally, the firm completed the school's Master Plan and Central Utilities Plan.<sup>112</sup> In Los Angeles County, the firm designed the University of California, Los Angeles (UCLA) School of Law in Westwood (1952), Clark High School in Glendale (1955) and the Arthur Amos Noyes Laboratory of Chemical Physics at the California School of Technology in Pasadena (1967).<sup>113</sup> The firm was also active outside of California and completed the campus master plan and building designs for The Principia in St. Louis, Missouri.<sup>114</sup>

#### *Winchton L. Risley*

Winchton L. Risley was born in 1887 in Delphos, Ohio and studied at Miami University in Oxford, Ohio and at Columbia University in New York. He served in the U.S. Navy from 1917 to 1918 during World War I prior to working for Carleton Monroe Winslow. Risley opened his own practice circa 1923 and received 6 honorary awards from the AIA as well as a House Beautiful Prize for the Wheeler Residence (1928) and an honorary mention for the Pan American Exposition of Arts (1928). In 1931 he was awarded bronze and gold medals by President Herbert Hoover.<sup>115</sup> In 1943, Risley formed Risely & Gould and was named a Fellow of the American Institute of Architects (AIA). While in private practice, Risley also taught architecture at the University of Southern California (USC) and UCLA. From 1949 to 1953, he served as a consulting architect for the Atomic Energy Commission in Los Alamos.<sup>116</sup>

#### *Stanley R. Gould*

Stanley R. Gould was born in 1906 in Portland Oregon. After receiving a degree in architecture, Gould worked for architecture firms Parkinson & Parkinson (1928-1934), A. C. Zimmerman (1935-36), and Reginal Johnson (1937-1938).<sup>117</sup> Gould was named manager of the architectural

department for the 10<sup>th</sup> Olympiad, which was held in Los Angeles in 1932. In this capacity he oversaw and coordinated construction of all Olympic facilities in the city. A decade later, in 1943, he formed Risley & Gould.<sup>118</sup>

#### *Howard B. Van Heuklyn*

A Los Angeles native and graduate of the USC College of Architecture (1947), Howard B. Van Heuklyn joined the firm of Risley & Gould in 1952.<sup>119</sup> Van Heuklyn was considered a specialist in Chinese architecture, partially due to his position as a member of the 14<sup>th</sup> Air Force in China during World War II.<sup>120</sup> Van Heuklyn received an AIA Honor Award in 1960 for the Magnavox Corporation in Torrance and is credited with the 1965 Glendale Self Realization Fellowship.<sup>121</sup>

### **William E. Blurock & Partners**

William E. Blurock & Partners, in partnership with Balch, Hutchason & Perkins, was responsible for the design of the Administration Building at CSUF.<sup>122</sup> Born in Los Angeles, William Blurock completed a bachelor's degree in architecture at USC in 1947. For a short while Blurock designed residences in Orange County before he partnered with other local architects to form Pleger, Blurock, Hougan & Ellerbroek in 1953. In 1960, Blurock broke off to establish his own firm in Newport Beach. In 1982, the firm changed its name to The Blurock Partnership and was active until 1994.<sup>123</sup>

Blurock specialized in educational institutions and was responsible for the planning and design of buildings on 32 California college campuses. Blurock also completed numerous Orange County civic projects including the Orange County Performing Arts Center (now known as the Segerstrom Center for the Arts) and the City of Santa Ana Civic Center Mall.

Blurock was very active in the architecture community and served on the California State Board of Architectural Examiners for 13 years. In 1968, he was elected Fellow of the AIA for outstanding contributions to the design and science of construction. USC acknowledged his work in 1993 with a Distinguished Alumnus award which lauded him as "an Orange County pioneer whose prolific work has contributed to the positive character of the community and whose warmth, vision and professionalism have inspired a generation of architects."<sup>124</sup> He received a lifetime achievement award by the AIA in 2009.<sup>125</sup>

### **Balch, Hutchason & Perkins**

Balch, Hutchason & Perkins, in partnership with William E. Blurock & Partners, was responsible for the design of the Administration Building at CSUF.<sup>126</sup> Balch, Hutchason & Perkins, consisting of William G. Balch, Willis K. Hutchason, and John L. Perkins, was a Los Angeles firm specializing in school architecture. The firm completed designs for William Howard Taft High School (1960), Gladstone High School (1964), Birmingham High School (1964) and Mission Viejo High School (1967).<sup>127</sup>

#### *William G. Balch*

William G. Balch was born in Pasadena circa 1901 and studied architecture at USC, graduating in 1928. Balch served as a draftsman for his brother Clifford A. Balch from 1922-1928.<sup>128</sup> After graduating from school, he worked as a partner of William Glenn Balch & Louis L. Bryan (1946 to 1953) and a partner of Balch, Hutchason & Perkins (1953 to 1969). Balch served as the associate architect for the design of Ventura College in 1955.<sup>129</sup>

*Willis K. Hutchason*

Willis K. Hutchason was born on January 8<sup>th</sup>, 1920 in Los Angeles. He studied architecture at UC Berkeley from 1938 to 1940 and at USC from 1940-1941. In 1970, his principal works were listed as William Howard Taft High School (1960), Danbury Elementary School (1968), and Griswold's Inn (1969) among others. He received an architectural award of excellence for the California Credit Union League Headquarters Building in 1964.<sup>130</sup>

*John L. Perkins*

John L. Perkins was born in Sioux Falls, South Dakota in 1913 and received a degree in architecture from the University of Minneapolis in 1941. Perkins worked as a draftsman and designer for several firms in the 1930s and 1940s, including Perkins & McWayne (1934-1942); Giffles & Vallet (1942-1943); and Metcalf, Hamilton & Kansas City Cos. (1943-1945). He joined the firm Balch, Hutchason & Perkins in 1945.<sup>131</sup>

**Thornton Abell**

Thornton Abell was responsible for the design of the Humanities and Social Sciences Building and the Visual Arts Complex at CSUF. Thornton Abell was born in Michigan in 1906 where he attended college at the University of Michigan (1924-1925). For two years, Abell worked as a designer for Clare C. Hosmer in Sarasota, Florida and for Joseph J. Kucera in Pasadena before continuing his education. Abell attended UC Berkeley (1927-1928) before transferring to USC, where he received a degree in architecture (1931). Abell was said to have moved to Southern California in order to garden year round; he was an avid iris hybridizer.<sup>132</sup> After graduating, Abell served as a designer and chief draftsman for Super, Marsh, Smith & Powell in Los Angeles from 1930 until 1942. In 1944, Abell opened his own firm, where he principally designed Modern-style residences.<sup>133</sup>

Throughout his career, Abell was most widely recognized for his residential commissions.<sup>134</sup> One of his best-known residential designs was Case Study House No. 7 in San Gabriel (Figure 38). Abell, alongside Eero Saarinen, Whitney Smith, and Ralph Rapson was listed as one of the younger architects who participated in the Case Study project. As Esther McCoy noted, Abell's

Case Study of 1948 in San Gabriel is a composition of Barcelona pavilion planes of wood (high louvred fence screening the bedroom patio facing the street) and of concrete block. In scale if not in area, it was a first study for a 1954 small low building which houses his office.<sup>135</sup>

Abell also designed his own International-style residence in Santa Monica Canyon (1937). He completed another model house for the Southern California Construction Industry and Home Show in 1952. A 1955 article identifies the architect's "aim in architecture [was] to arrive at a design so simple that it appears both spontaneous and inevitable." Abell maintained that a smooth, plain wall was not a curse, but that "the quiet wall lends serenity to a room."<sup>136</sup>

Recognized as a master architect in Los Angeles, Abell completed numerous other residences across the city. According to Historic Places LA, other historically significant projects included the Gutav R. Rich House, Siskin House, Haines House No. 2, and Leslie House. Thornton is known for his low, streamlined forms and use of simple, high-quality materials.<sup>137</sup> Abell received numerous awards for his designs over the years. The AIA honored him with awards in 1951, for the Beck House; 1954 for the Abell Office Building and Model House; and 1959 for the 1956-built Adelman House in Beverly Hills.

Abell joined the AIA in 1944, was named a Fellow in 1966, and was elected president of the Southern California chapter in 1978.<sup>138</sup>

### **Marsh, Smith & Powell**

Although Marsh, Smith, & Powell did not complete work at CSUF, David D. Smith and Herbert James Powell, two of the architects associated with the firm, participated in the school's Master Plans. Their early work at this firm therefore influenced the designs completed by Smith, Powell & Morgridge and Powell, Morgridge, Richards & Coghlan at CSUF.

Marsh, Smith & Powell was formed in 1928 by Norman F. Marsh, David D. Smith, and Herbert James Powell, and quickly became a key player in the evolution of school buildings from the 1920s through the 1950s. As school design evolved in the 1920s and 1930s, the firm helped define the textbook indoor-outdoor campus that came to characterize Southern Californian schools.<sup>139</sup> The firm played a seminal role in Southern California's shift towards more "functional, child-centered, open-air schools."<sup>140</sup> Principal commissions included El Camino College (1950), the Life Science Building at UCLA (1952), and San Marino High School (1954) among numerous others.<sup>141</sup> The firm also served as the University Architect at USC, where they hired USC graduates such as Thornton M. Abell to work on the campus. Abell, another architect associated with CSUF, worked for the firm from 1930 to 1942.<sup>142</sup> USC graduate and master architect Whitney R. Smith worked for the firm as a draftsman in 1939. Marsh, Smith & Powell received several awards from the AIA for their projects, including an Honorary Certificate for Hollywood High School (1939), and 1<sup>st</sup> Honorary Awards for Corona del Mar School (1949) and Santa Monica City College (1954).<sup>143</sup>

Howard Henry Morgridge joined the firm as a designer from 1943 to 1947 and as a partner at from 1948 to 1954. In 1955, Norman F. Marsh passed away. The firm of Smith, Powell & Morgridge was formed as a successor firm in 1955 after Marsh's death.

### **Smith, Powell & Morgridge**

The firm of Smith, Powell & Morgridge was responsible for the 1962 Master Plan at CSUF. The firm was formed in 1955 after the death of Marsh, as a successor firm to Marsh, Smith & Powell. That year, the remaining three partners at the firm rebranded the firm accordingly. The firm held this name from 1955 to 1966. Located out of Los Angeles, the firm of Smith, Powell & Morgridge was heavily active in Fullerton in the postwar years. In 1956, it designed the Fern Drive School in Fullerton, a postwar school that adopted residential forms and details and in 1962, it completed the New Formalist style Fullerton City Hall.<sup>144,145</sup> During this period, Smith, Powell & Morgridge also expanded to complete municipal jobs, designing the Buena Park City Hall in 1958 and the Child Guidance Center in Pasadena in 1960.<sup>146</sup>

### **Powell, Morgridge, Richards & Coghlan**

Powell, Morgridge, Richards & Coghlan designed the 1967 and 1974 Master Plans of CSUF. The firm was formed in 1966 as a successor firm to Smith, Powell & Morgridge by Herbert James Powell, Henry Morgridge, Albert Anton Richards, and Rapier R. Coghlan. That year they designed the library at Chapman College in Orange.<sup>147</sup>

#### *David D. Smith*

David D. Smith was born in Kentucky before moving to Los Angeles at an unknown date. In 1924, Smith completed a few projects in the area including the Washington Martha School and the Venice Athletic Club, both in 1924.<sup>148</sup> He joined the firm of Marsh, Smith & Powell in 1928. Smith was

involved with the design of the William Mead Homes, a public housing development completed in 1942.<sup>149</sup>

#### *Herbert James Powell*

James Powell was born in Chicago in 1898. He pursued a bachelor's degree at the University of Redlands in 1920 and secured a master's degree from the Harvard School of Design at Harvard University in 1924, where he received an AIA scholastic medal. After completing his studies, Powell was awarded a Sheldon Travel Fellowship. Once again established in the United States, Powell took up work as a draftsman for a number of firms, including McKim, Mead & White (1925), Thomas H. Ellett (1925); and Marston, Van Pelt & Mayberry (1927). In this last capacity he assisted with the design of Chapel University in Redlands (1927).<sup>150</sup>

In 1928, Powell worked as a designer for Norman F. before he was brought on as a partner of Marsh, Smith & Powell until 1955. Powell served on the California State Board of Architectural Examiners from 1944 to 1951.<sup>151</sup> He passed away in 1996 at the age of 97.<sup>152</sup>

#### *Henry Morgridge*

Henry Morgridge was born in Pasadena in 1919 and worked for short periods as a designer for Van pelt & Lind in 1937 and W. A. Bechtel Co, in 1942.<sup>153</sup> He received a bachelor's degree from USC in 1942. Shortly after graduating, Morgridge joined the army during World War II, where he was stationed in the Philippines and Japan from 1942 until 1944. Upon his return to Los Angeles, Morgridge became partner at Marsh, Smith and Powell. He was recognized as a Fellow of the AIA in 1966 for his service to the profession.<sup>154</sup> Morgridge passed away in 2001.

#### *Albert A. Richards and Redmond R. Coghlan*

No additional information was available on Albert A. Richards and Redmond R. Coghland besides their involvement with the firm mentioned above.

#### **George T. Nowak**

George T. Nowak designed Titan Hall in 1974 while it was associated with the Western State University College of Law. Besides designing several movie theaters in Los Angeles County, no additional information regarding Nowak's work was available.<sup>155,156</sup>

## 4.3 Landscape Architects

### **Cornell, Bridgers and Troller/ Cornell, Bridgers, Troller and Hazlett/Bridgers, Troller and Hazlett**

Cornell, Bridgers and Troller were responsible for some of the early landscape design of the CSUF center quad as well as the Engineering and Computer Science Building Complex. The latter iteration of the firm as Bridgers, Troller and Hazlett completed the landscape design for the Arboretum.

Following the firm's establishment in 1953, they built a prolific practice in landscape design throughout the region. Comprised of Ralph Cornell, Howard Troller, and Samuel Bridgers, the firm was located in Los Angeles and completed numerous municipal projects in the city. Notable projects included the City Hall East Mall, the campus for the Department of Water and Power, the Music Center, and the Civic Center Mall (Grand Park). Large-scale landscape projects included the Elysian Park Master Plan, Rose Hills Memorial Park, and the 4,000-acre Valencia at Newhall Ranch. The firm also completed work outside of California including the landscapes of the Ford Motor Company's General Office Building in Dearborn, Michigan. In 1969, Jere Hazlett joined the firm which consequently became Cornell, Bridgers, Troller and Hazlett. After Cornell's death in 1972, Bridgers, became senior partner. Bridgers, Troller and Hazlett worked together until 1978 when they formed individual firms.<sup>157</sup>

#### *Ralph Cornell*

Ralph Cornell, born in Nebraska in 1890, relocated to California in 1908. Cornell attended Pomona College where he graduated in 1914 before earning a master's degree in Landscape Architecture from Harvard University in 1917. Cornell returned to Los Angeles County, where he opened one of the first landscape architecture practices in Southern California. Cornell was known for championing "design restraint, thoughtful indigenous plantings, and preservation of the native landscape as a cultural necessity for posterity."<sup>158</sup> According to the Cultural Landscape Foundation, "Ralph Cornell was the single most influential landscape architect to shape Los Angeles... he is arguably the Olmsted of Los Angeles."<sup>159</sup> Cornell was known for his master planning of Pomona College, UCLA, and the University of Hawaii. He completed projects for Torrey Pines Park in San Diego, La Brea Tar Pits, Oak Park Cemetery, and Beverly Gardens.<sup>160</sup> He also completed landscaping for the now-demolished Parker Center in Los Angeles (**Error! Reference source not found.**).

#### *Samuel Bridgers*

Samuel Bridgers was born in 1920 in Louisiana before moving to Southern California in 1933. Bridgers attended UC Berkeley where he studied landscape architecture, graduating in 1950. In 1953, Bridgers joined the firm of Ralph Cornell. He was promoted to partner in 1955. Eventually, Bridgers left to establish his own practice after Ralph Cornell's death.<sup>161</sup>

#### *Howard Troller*

Howard Troller was born in Glendale, California in 1923 and completed his undergraduate and graduate degrees in landscape architecture at UC Berkeley. While residing in San Francisco, Troller worked as a draftsman at the offices of Eckbo, Royston and Williams before returning to Los Angeles in 1950. Shortly after his move, Troller joined the office of Ralph Cornell as principal designer; he and Bill Bridgers were promoted to partners in 1955. Troller eventually opened his own firm in 1978. In 1992, he was elected a Fellow of the American Society of Landscape Architects.<sup>162</sup>

## **Myrton Purkiss**

Myrton Purkiss was responsible for landscaping immediately surrounding the Heritage House in the Arboretum. He was born in Canada and migrated to the United States at age twelve. Purkiss attended USC and the Chouinard Art Institute in Los Angeles where he studied ceramics. During World War II, Purkiss was drafted into military service where he worked as a cartographer. He returned to California in 1941 and settled in Fullerton. He transitioned careers in the mid-1950s, when he began his practice as a landscape architect.<sup>163</sup> He opened a firm, Purkiss-Rose Associates, and designed landscapes for public and private spaces.<sup>164</sup>

## 5 Evaluation Results

This survey included permanent CSUF properties aged 45 years and older. A total of **15 properties** fall into this category. Based on research and survey, a **total of 13 properties** appear eligible for the NRHP and/or CRHR. The following evaluation results describe the **criteria conferring eligibility**. Where substantial evidence supports a finding of eligibility under a given criteria, those criteria are described. Table 2 summarizes the survey results. Figure 45 presents a map depicting survey results. The following narrative presents a survey summary for each property.

**Table 2 Evaluation Results, CSUF Permanent Facilities Constructed through 1975**

	Current Building Name	Historic Building Name	Year	Historical Resource?	Criteria	Contributor to Historic District?
1	Titan House	Henry T. Hetebrink House	1886	Yes	A/1, C/3	No
2	Heritage House	Dr. George C. Clark House and Office	1896	Yes	A/1, C/3	No
3	George G. Golleher Alumni House	Mahr House	1931	Yes	A/1, C/3	No
4	McCarthy Hall	Letters and Science Building	1963	Yes	A/1; C/3	Yes (Campus Core Historic District)
5	Clayes Performing Arts Center	Music-Speech-Drama Building	1965	Yes	A/1; C/3	Yes (Campus Core Historic District)
6	Titan Gymnasium/Health Science Bldg.	Physical Education Gymnasium Building	1965-1967	Yes (Main Gym only)	1; 3 (CRHR only)	No
7	Pollak Library	Library	1966	Yes	A/1; C/3	Yes (Campus Core Historic District)
8	Book Store/Titan Shops	Cafeteria-Commons Building	1967	Yes	A/1; C/3	No
9	Humanities & Social Sciences Building	Same	1969	Yes	A/1; C/3	Yes (Campus Core Historic District)
10	Visual Arts Complex (6 buildings)	Same	1969	Yes	A/1; C/3	No
11	Langsdorf Hall	Administration Building	1970	Yes	A/1; C/3	Yes (Campus Core Historic District)
12	Engineering & Comp Science Complex (5 buildings)	Engineering Building	1971	No	N/A	N/A
13	Student Health & Counseling Center	Health Center	1974	Yes	1; 3 (CRHR only)	No
14	Titan Hall	Western State University College of Law	1974	Yes	1; 3 (CRHR only)	No
15	Arboretum	Same	1972-1979	No	N/A	N/A

Fig. 45 Survey Results

## 5.1 Summary of Evaluation Results

As noted previously, all properties 45 years of age and older were surveyed and evaluated against the NRHP and CRHR criteria. All criteria were applied in the survey, which considered buildings, structures, objects, as well as potential historic districts and cultural landscapes. Among the 15 properties, 13 properties met the criteria for eligibility as described below.

The historic context section of this report described a number of sociocultural events on campus over the decades. Those contexts were also applied in these evaluations—however, based on available literature, the association with those events was not deemed to rise to the level required for eligibility under the applicable criteria.

Due to various in-fill projects, which have altered the design and cohesiveness of the original site plan, its landscape architecture, and circulation corridors, the CSUF campus does not appear to meet the eligibility as a cultural landscape. The most intact collection of buildings/site design features on campus, the Campus Core Historic District, appears eligible as a historic district. The district and its contributing properties are described below. Subsequent sections describe the applicable criteria, periods of significance, and reasons statements/descriptions of each eligible resource.

### #1: CSUF Campus Core Historic District

**Criteria A/1 eligibility:** The CSUF Campus Core Historic District is eligible as an intact, cohesive collection of institutional properties built during CSUF’s founding years. The historic district exemplifies institutional/educational facility expansion in Fullerton during the City’s postwar transformation.

**Period of significance:** 1963 – 1970

**Criteria C/3 eligibility:** The CSUF Campus Core Historic District is also eligible as a distinctive, outstanding example of the New Formalist/Late Modern architectural style, applied to institutional properties/educational facilities. The district represents one of the most expansive and intact collections of New Formalist/Late Modern architecture in Fullerton.

**Period of Significance:** 1963 – 1970

**Historic District Description:** The Campus Core Historic District is a cohesive, distinctive grouping of the earliest buildings designed for CSUF during its most active construction phase. The district exemplifies the rapid, widespread postwar expansion of Fullerton, both in terms of population growth and new construction (Criteria A/1).

In addition, with its unified site plan, distinctive architectural style, associated landscaping and hardscaping features, the Campus Core Historic District represents one of Fullerton’s most extensive and intact collections of New Formalist/Late Modern architecture (Criteria C/3).

Primary contributors to the historic district are: (1) McCarthy Hall; (2) Clayes Performing Arts Center; (3) Pollak Library; (4) Humanities and Social Sciences Building. The secondary contributor to the historic district, based on its location, is Langsdorf Hall. The five buildings that contribute to the historic district are stylistically unified with varied expressions of a New Formalist/Late Modern architectural style and an emphasis on monumentality; the use of smooth white and natural-toned concrete exteriors; and repeating hexagonal motifs. Character-defining features for each

contributing building are described in more detail below. The buildings exhibit a unified site design, connected by flanking circulation corridors, landscaping/hardscaping features, and a shared central quad; these are also contributing components of the historic district.

A panoramic photograph of the quad illustrates the unified site design of the district (Figure 46). In addition to a cohesive design lexicon, the buildings maintain a compatible spatial relationship, due to the presence of various landscape and hardscape features in the central quad (Figure 47; Figure 48):

- Tapered, concrete retaining walls
- Concrete benches with sloped, contoured legs
- Concrete planters; mature trees

Source: Rincon Consultants, 2019

## #2: McCarthy Hall

**Historic Name / Current Name:** Letters and Science Building / McCarthy Hall (1963)  
**Eligible Historical Resource?** Yes; contributor to Campus Core Historic District  
**Applicable Criteria:** A/1; C/3  
**Period of Significance:** 1963 – 1970 (historic district)

### Character-Defining Features:

- Site plan/design, with mature landscaping and siting in relation to other buildings
- Axial, north-south circulation corridor/sight line flanking building
- New Formalist/Late Modern architectural style; symmetrical design composition; smooth white concrete cladding
- Six-story monumental massing; flat roof
- Projecting walkways with low metal fences on lower stories; screen enclosures on top stories
- Walkways lined with three full-height concrete screens with honeycomb-patterned perforations
- Thirteen shallow, full-height projecting arches spanning north and south elevations; windows recessed within full-height arches
- Precast textured concrete panels and aluminum lettering along southern elevation
- North elevation entrance with central roll-up grille accessed by two low-slope concrete ramps

### Overview of Alterations:

- Connecting second-story walkway between southern and northern elevations

### Reasons Statement:

**Criteria A/1 eligibility:** McCarthy Hall is a contributor to the Campus Core Historic District, eligible under NRHP/CRHR Criteria A/1 as an intact, cohesive collection of institutional properties built during CSUF's founding years. The district exemplifies a significant pattern of development: institutional/educational facility expansion during the City's postwar boom and transformation.

**Criteria C/3 eligibility:** McCarthy Hall is a contributor to the Campus Core Historic District, eligible for NRHP/CRHR listing under Criteria C/3 for its distinctive New Formalist/Late Modern architectural style. The CSUF Campus Core Historic District, along with its associated landscaping and hardscaping

features, represents one of Fullerton's most extensive and intact collections of New Formalist/Late Modern architecture.

### #3: Clayes Performing Arts Center

**Historic Name / Current Name:** Music-Speech-Drama Bldg/Clayes Performing Arts Ctr (1965)  
**Eligible Historical Resource?** Yes; contributor to Campus Core Historic District  
**Applicable Criteria:** A/1; C/3  
**Period of Significance:** 1963 – 1970 (historic district)

#### Character-Defining Features:

- Site plan/design, with mature landscaping and siting in relation to other three buildings in quad
- Axial, north-south circulation corridor/sight line flanking building
- Mostly two- to three-story massing
- Monumental mass/volume and repeating geometric hexagonal pattern
- New Formalist/Late Modern architectural style
- Symmetrical design composition; smooth concrete exterior; capped with flat roof
- Pre-cast concrete screen panel perforated with elongated hexagonal voids to form a complex honeycomb pattern.
- Concrete panels along north and east elevations
- Ribbons of fixed aluminum windows
- Covered walkway with folded plate roof

#### Overview of Alterations:

- Addition on west elevation in 2000
- Solar panel installation on roof

#### Reasons Statement:

**Criteria A/1 eligibility:** Clayes Performing Arts Center is a contributor to the Campus Core Historic District, eligible under NRHP/CRHR Criteria A/1 as an intact, cohesive collection of institutional properties built during CSUF's founding years. The district exemplifies a significant pattern of development: institutional/educational facility expansion during the City's postwar boom and transformation.

**Criteria C/3 eligibility:** Clayes Performing Arts Center is a contributor to the Campus Core Historic District, eligible for NRHP/CRHR listing under Criteria C/3 for its distinctive New Formalist/Late Modern architectural style. The CSUF Campus Core Historic District, along with its associated landscaping and hardscaping features, represents one of Fullerton's most extensive and intact collections of New Formalist/Late Modern architecture.

## #4: Pollak Library

**Historic Name / Current Name:** Library / Pollak Library (1966)  
**Eligible Historical Resource?** Yes; contributor to Campus Core Historic District  
**Applicable Criteria:** A/1; C/3  
**Period of Significance:** 1963 – 1970 (historic district)

### Character-Defining Features:

- Site plan/design, with mature landscaping and unified spatial relationships
- Axial, north-south circulation corridor/sight line flanking building
- Five-story massing; box-like shape supported by concrete, beveled golf tee-shaped legs
- New Formalist/Late Modern architectural style
- Symmetrical design composition
- Flat roof with minimal eave overhang
- Smooth natural-colored concrete base
- Projecting, honeycomb-patterned concrete screen applied to main elevations
- Wide, low entrance terrace facing quad

### Overview of Alterations:

- Addition on north elevation circa 2003
- Removed material on west/south elevations

### Reasons Statement:

**Criteria A/1 eligibility:** The Pollak Library is a contributor to the Campus Core Historic District, eligible under NRHP/CRHR Criteria A/1 as an intact, cohesive collection of institutional properties built during CSUF’s founding years. The district exemplifies a significant pattern of development: institutional/educational facility expansion during the City’s postwar boom and transformation.

**Criteria C/3 eligibility:** The Pollak Library is a contributor to the Campus Core Historic District, eligible for NRHP/CRHR listing under Criteria C/3 for its distinctive New Formalist/Late Modern architectural style. The CSUF Campus Core Historic District, along with its associated landscaping

and hardscaping features, represents one of Fullerton's most extensive and intact collections of New Formalist/Late Modern architecture.

## #5: Humanities and Social Sciences Building

<b>Historic Name / Current Name:</b>	<b>Humanities and Social Sciences Building (1969)</b>
<b>Eligible Historical Resource?</b>	<b>Yes; contributor to Campus Core Historic District</b>
<b>Applicable Criteria:</b>	<b>A/1; C/3</b>
<b>Period of Significance:</b>	<b>1963 – 1970 (historic district)</b>

### Character-Defining Features:

- Site plan/design, with mature landscaping and siting in relation to other three buildings in quad
- Axial, north-south circulation corridor/sight line flanking building
- Mass/volume; seven stories supported by recessed beveled golf tee-shaped legs
- New Formalist/Late Modern architectural style
- Symmetrical design composition
- Flat roof
- Exteriors of smooth natural-colored concrete and featuring a repeating hexagonal pattern
- Elongated vertical bands on west elevation with evenly placed hexagonal medallions creates screen

### Overview of Alterations:

- Industrial doors appear nonoriginal

### Reasons Statement:

**Criteria A/1 eligibility:** The Humanities and Social Sciences Building is a contributor to the Campus Core Historic District, eligible under NRHP/CRHR Criteria A/1 as an intact, cohesive collection of institutional properties built during CSUF’s founding years. The district exemplifies a significant pattern of development: institutional/educational facility expansion during the City’s postwar boom and transformation.

**Criteria C/3 eligibility:** The Humanities and Social Sciences Building is a contributor to the Campus Core Historic District, eligible for NRHP/CRHR listing under Criteria C/3 for its distinctive New Formalist/Late Modern architectural style. The CSUF Campus Core Historic District, along with its associated landscaping and hardscaping features, represents one of Fullerton’s most extensive and intact collections of New Formalist/Late Modern architecture.

## #6: Langsdorf Hall

**Historic Name / Current Name:** Administration Building / Langsdorf Hall (1970)  
**Eligible Historical Resource?** Yes; contributor to Campus Core Historic District  
**Applicable Criteria:** A/1; C/3  
**Period of Significance:** 1963 – 1970 (historic district)

### Character-Defining Features:

- Unified site plan/design, with mature landscaping and connecting corridors
- Situated behind central fountain
- Nine-story central cross-shaped body with three-story eastern wing supported by concrete, beveled golf tee-shaped legs; columns form a sheltered arcade
- New Formalist/Late Modern architectural style
- Symmetrical design composition; flat roof
- Exteriors of smooth natural-colored concrete and featuring central repeating hexagonal patterns on each elevation; cells frame long, narrow windows
- South elevation features deeply recessed two-story entrance with curtain wall
- Concrete terrace on north elevation; diagonal U-shaped staircases

### Overview of Alterations:

- Windows and doors along north elevation of wing appear to be nonoriginal

### Reasons Statement:

**Criteria A/1 eligibility:** Langsdorf Hall is a contributor to the Campus Core Historic District, eligible under NRHP/CRHR Criteria A/1 as an intact, cohesive collection of institutional properties built during CSUF's founding years. The district exemplifies a significant pattern of development: institutional/educational facility expansion during the City's postwar boom and transformation.

**Criteria C/3 eligibility:** Langsdorf Hall is a contributor to the Campus Core Historic District, eligible for NRHP/CRHR listing under Criteria C/3 for its distinctive New Formalist/Late Modern architectural style. The CSUF Campus Core Historic District, along with its associated landscaping and hardscaping features, represents one of Fullerton's most extensive and intact collections of New Formalist/Late Modern architecture.

## #7: Titan Gymnasium/Kinesiology & Health Science Building

**Historic Name / Current Name:** Physical Ed and Gymnasium Bldg/Titan Gymnasium/  
Kinesiology & Health Science Building (1965-1967)

**Eligible Historical Resource?** Yes, individually eligible (due to site plan alterations/recent in-fill, this property is not a contributor to the Campus Core Historic District)

**Applicable Criteria:** CRHR 1/3 (Not NRHP eligible due to alterations)

**Period of Significance:** 1965 – 1967

### Character-Defining Features:

- Site plan/design, with mature landscaping
- One-story massing of geometric volumes
- New Formalist/Late Modern architectural style
- Flat roof
- Folded plate roofs with tapered squared columns along north and west elevations
- Smooth brick and concrete paneled exterior
- Repeating hexagonal pattern on vertically projecting concrete volume
- Recessed entrance, raised terrace, and multi-colored brick hardscaping along west elevation creating a sense of monumentality
- Band of industrial doors on west elevation
- Associated concrete benches with tapered pier legs

### Overview of Alterations:

- Addition on east/south elevations circa 2003
- Solar panel installation on roof

### Reasons Statement:

**Criteria 1 eligibility:** Titan Gymnasium appears CRHR eligible under Criteria 1 for its exemplification of Fullerton’s rapid and extensive institutional growth and building boom in the postwar period. The building reflects a significant pattern of development in Fullerton: namely, that of institutional/educational facility expansion during the City’s postwar period.

**Criteria 3 eligibility:** Titan Gymnasium appears CRHR eligible under Criteria 3 for its intact, distinctive New Formalist/Late Modern architectural style. The contributing features of the resource include the general site plan, surrounding hardscaping, and the concrete plaza that connects the

building to the Titan Shop/Book Store. Due to alterations (including additions in 2003), the Titan Gymnasium is not recommended eligible for the NRHP.

## #8: Titan Shop/Book Store

**Historic Name / Current Name:** Cafeteria-Commons Building / Titan Shop/Book Store (1967)  
**Eligible Historical Resource?** Yes, individually eligible (due to site plan alterations/recent in-fill, this property is not a contributor to the Campus Core Historic District)  
**Applicable Criteria:** A/1; C/3  
**Period of Significance:** 1967

**Character-Defining Features:**

- Site plan/design, with mature landscaping
- Rectangular form; New Formalist/Brutalist architectural style
- Symmetrical design composition
- Inverted umbrella shell roof upheld by tapered columns; cantilevered roof eaves
- Concrete-clad exterior walls; walls marked with procession of attached concrete piers with reverse tapering
- Curtain walls and bands of windows with slightly raised mullions, emphasizing verticality
- Squared ‘U’-shaped diagonal concrete ramps/stairs with raised sides on north and south elevations
- Tapered rectangular planters at southern end, raised concrete walls, and gradually stepped platform, emphasizing the building’s material and monumentality

**Overview of Alterations:**

- Industrial doors appear to be nonoriginal

**Reasons Statement:**

**Criteria 1 eligibility:** Titan Shop/Book Store appears NRHP/CRHR eligible under Criteria A/1 for its exemplification of Fullerton’s rapid and extensive institutional growth and building boom in the postwar period. The building reflects a significant pattern of development in Fullerton: namely, that of institutional/educational facility expansion during the City’s postwar period.

**Criteria 3 eligibility:** Titan Shop/Book Store appears NRHP/CRHR eligible under Criteria C/3 for its distinctive, intact New Formalist/Brutalist architectural style. Contributing elements include the surrounding hardscaping and concrete plaza connecting the building to the Titan Gymnasium.

## #9: Engineering and Computer Science Building Complex

<b>Historic Name / Current Name:</b>	<b>Engineering Building / Engineering and Computer Science Building Complex</b>
<b>Year of Construction:</b>	<b>1971</b>
<b>Architect/Designer/Contractor:</b>	<b>Tutor-Myers Co.</b>
<b>Eligible Historical Resource?</b>	<b>No</b>
<b>Applicable Criteria:</b>	<b>N/A</b>

### **Character-Defining Features:**

- N/A

### **Overview of Alterations:**

- Western building in complex constructed in 1988

### **Reasons Statement:**

The Engineering and Computer Science Building Complex exhibits some of the character-defining features of the New Formalist/Late Modernist architectural style. However, the complex overall, seen in the context of similar buildings on campus, is an example but not a distinctive example of its architectural style.

In addition, research did not indicate that the building is associated with any significant events or patterns of development.

The building complex also does not appear to meet NRHP Criterion G.

Therefore, it is not eligible for either the NRHP or CRHR and is not a historical resource pursuant to CEQA.

## #10: Student Health & Counseling Center

**Historic Name / Current Name:** Health Center / Student Health & Counseling Center (1974)  
**Eligible Historical Resource?** Yes, individually eligible (due to site plan alterations/in-fill, this property is not a contributor to the Campus Core Historic District)  
**Applicable Criteria:** 1/3 (CRHR only)  
**Period of Significance:** 1974

### Character-Defining Features:

- Site plan/design, with mature landscaping and stepped retaining wall; benches; large central lawn with mature trees
- Mass/volume/symmetrical design composition; emphasis on horizontality; Mid-Century Modern/Late Modernism architectural style; ribbon windows
- Paired paneled concrete doors; heavy projecting roof slab with overhanging eaves and pronounced fascia; repeating rectangles and squares with dropped lights
- Wrap-around colonnade of square columns; temple-like form; smooth concrete exteriors; hexagonal decorative motif

### Overview of Alterations:

- Doors along east elevation appear to be unoriginal

### Reasons Statement:

**Criteria 1 eligibility:** The Student Health & Counseling Center appears CRHR eligible under Criteria 1 for its exemplification of Fullerton’s rapid and extensive institutional growth and building boom in the postwar period. Due to its age (fewer than 50 years old), the building is not recommended eligible for the NRHP under Criteria A at this time.

**Criteria 3 eligibility:** The Student Health & Counseling Center appears CRHR eligible under Criteria 3 for its distinctive Mid-Century Modern/Late Modernist architectural style. Due to its age (fewer than 50 years old), the building is not recommended eligible for the NRHP at this time. Contextual information on Mid-Century Modern/Late Modern architecture in Fullerton does not exist to demonstrate that the building meets NRHP Criterion G (for exceptional significance for properties

under 50 years of age). The NRHP criteria can be reassessed once such information is available or the building turns 50 years of age.

## #11: Visual Arts Building Complex

<b>Historic Name / Current Name:</b>	<b>Visual Arts Building / Visual Arts Building Complex (1969)</b>
<b>Eligible Historical Resource?</b>	<b>Yes, multiple-property resource</b>
<b>Applicable Criteria:</b>	<b>A/1; C/3</b>
<b>Period of Significance:</b>	<b>1969-1970</b>

### Character-Defining Features:

- One-to-two-story massing; horizontal design composition; geometric volumes
- Mid-Century Modern architectural style
- Complex of buildings connected by sheltered breezeways/arcades with flat roofs supported by squared columns
- Flat roof; exteriors of smooth concrete
- Modular design and brick pathways
- Post-and-beam construction
- Bands of sliding aluminum windows
- Grid-like screens above doorways
- Large water feature in center of complex
- Exterior spaces sectioned off with wood fences
- “Water Wall” sculpture by Ray Heins (1970)

### Overview of Alterations:

- N/A

### Reasons Statement:

**Criteria A/1 eligibility:** Visual Arts Building Complex appears NRHP/CRHR eligible under Criteria A/1 for its exemplification of Fullerton’s rapid and extensive institutional growth and building boom in the postwar period. The complex reflects a significant pattern of development in Fullerton: namely, that of institutional/educational facility expansion during the City’s postwar period.

**Criteria C/3 eligibility:** The Visual Arts Building Complex appears NRHP/CRHR eligible under Criteria C/3 for its distinctive Mid-Century Modernist architectural style. Although originally included in the 1962 Master Plan, the Visual Arts Building Complex was not constructed until 1969 and is physically separated and stylistically differentiated from the CSUF’s historic core. The complex’s modular, post-and-beam style is typical of Mid-Century Modern institutional architecture. The 1970 “Water Wall” sculpture, reflecting pool, and courtyard contribute to this complex.

## #12: Titan Hall

**Historic Name / Current Name:** Western State University College of Law / Titan Hall (1974)  
**Eligible Historical Resource?** Yes, individually eligible (due to its location, this property is not a contributor to the Campus Core Historic District)  
**Applicable Criteria:** 1/3 (CRHR only)  
**Period of Significance:** 1974

### Character-Defining Features:

- Three-story massing; emphasis on verticality; New Formalist/Late Modernism style; symmetrical design composition
- Flat roof with slightly overhanging eave; tiered appearance from end bays
- Building form accentuated with thick fascia and belt course; smooth concrete exterior; ribbon windows with thick surrounds
- Bays on north and south elevations characterized by a tall central projection flanked by two smaller towers, rough concrete masonry units (CMUs), and column of fixed windows capped with flat roof
- Recessed entrance features floor-to-ceiling windows and industrial doors

### Overview of Alterations:

- N/A

### Reasons Statement:

**Criteria 1 eligibility:** Titan Hall appears CRHR eligible under Criteria 1 for its exemplification of Fullerton’s rapid and extensive institutional growth and building boom in the postwar period. Due to its age (fewer than 50 years old), the building is not recommended eligible for the NRHP under Criteria A at this time.

**Criteria 3 eligibility:** Titan Hall appears CRHR eligible under Criteria 3 for its distinctive New Formalist/Late Modernist architectural style. Due to its age (fewer than 50 years old), the building is not recommended eligible for the NRHP at this time. Although it is a distinctive example of its style, contextual information on New Formalism/Late Modern architecture in Fullerton as a whole does not exist to demonstrate that the building meets NRHP Criterion G (for exceptional significance for properties under 50 years of age). The NRHP criteria can be reassessed once such information is available or the building turns 50 years of age.

### #13: Titan House

**Historic Name / Current Name:** Henry T. Hetebrink House / Titan House (1886)  
**Eligible Historical Resource?** Yes, individually eligible  
**Applicable Criteria:** A/1, C/3  
**Period of Significance:** 1886

**Character-Defining Features:**

- One-story massing
- Colonial Revival-influenced style
- Symmetrical design composition
- Hipped roof with interior brick chimney, slight eave overhang, exposed rafter tails
- Exterior brick walls
- Full-width porch with brick base and hipped roof, squared tapered columns and piers
- Rear entry porch with concrete base, wood latticework siding, squared paneled piers, wood balustrade, and glazed doors
- Wood transom windows and casement windows flanking primary entrance
- Double-hung wood windows

**Overview of Alterations:**

- Roof vents
- Double-entry stairs and ADA-accessible ramp on south and east elevations
- Original door appears to have been replaced
- Greenhouse addition along western elevation

**Reasons Statement:**

**Criteria A/1:** The Titan House (Henry T. Hetebrink House), built for and by Fullerton settler and citrus farmer Henry Hetebrink, appears NRHP/CRHR eligible under Criteria A/1, as a rare, intact embodiment of a significant pattern of development: namely, Fullerton’s founding years and early agricultural era.

**Criteria C/3:** The Hetebrink House appears NRHP/CRHR eligible under Criteria C/3 as a rare example of a 19<sup>th</sup>-century Colonial Revival-influenced style home and as one of the oldest brick residences in Orange County.

## #14: George G. Golleher Alumni House

**Historic Name / Current Name:** Mahr House / George G. Golleher Alumni House (1931)  
**Eligible Historical Resource?** Yes (individually eligible)  
**Applicable Criteria:** C/3  
**Period of Significance:** 1931

### Character-Defining Features:

- Two-story massing
- Spanish Colonial Revival style
- Asymmetrical design composition with central rectangular body and various wings
- Flat and gable roof clad in red clay tiles with exposed rafter tails
- Battered stucco-clad exterior
- Central courtyard with fountain featuring stucco- and tile-clad base
- Balconies with double wood doors
- Inset balcony along eastern elevation with squared piers
- Paired wood casement windows

### Overview of Alterations:

- Building appears to have been re-stuccoed, possibly in 1960
- North wing addition
- Concrete Masonry Unit (CMU) stucco-clad wall with archway entrance and rear arcade
- Tile flooring of interior courtyard
- Wood gate entrances along eastern elevation
- Modern light sconces
- Wood pergola

### Reasons Statement:

**Criteria C/3:** The George G. Golleher Alumni House (Mahr House) appears NRHP/CRHR eligible under Criteria C/3 as an intact, distinctive example of the Spanish Colonial Revival style.

## #15: Heritage House

**Historic Name / Current Name:** Dr. George C. Clark House and Office/Heritage House (1896)  
**Eligible Historical Resource?** Yes (listed in the NRHP)  
**Applicable Criteria:** A/1, C/3

### Character-Defining Features:

- Architectural focal point and anchor of the CSUF Arboretum complex
- One-and-a-half-story massing
- Eastlake Victorian style
- Asymmetrical design composition
- Wood clapboard wall cladding with corner boards and fish scale detailing on gable ends
- Full-width wrap-around porch with turned wood spindle supports, low wood balustrade, decorative trusses, and spindlework frieze
- Beveled, stained-glass, and single-hung wood windows
- Sunburst and basket weaving motifs in window surrounds
- Rear bay window capped with gable roof featuring elaborate ornamented gable detailing and roof cresting

### Overview of Alterations:

- Moved to current site in 1972
- Reconstructed steeply pitched hipped with cross gabled roof; cedar shingle sheathing; interior brick chimneys and ornate gables
- Rear ADA-accessible ramp
- Interior spaces re-plastered

### Reasons Statement:

**Criteria A/1:** The Heritage House (Dr. George C. Clark House and Office) is listed on the NRHP. The property appears NRHP/CRHR eligible under Criteria A/1, as a rare, intact embodiment of a significant pattern of development: namely, Fullerton’s founding years and early agricultural era.

**Criteria C/3:** The Heritage House appears NRHP/CRHR eligible under Criteria C/3 as one of the last remaining examples of the Eastlake Victorian style in Fullerton (C/3) and an intact exemplification of Fullerton’s founding years (A/1).

## #16: Arboretum

**Historic Name / Current Name:** Arboretum (1972-1979)  
**Eligible Historical Resource?** No  
**Applicable Criteria:** N/A

### Character-Defining Features:

- N/A

### Overview of Alterations:

- N/A

### Evaluation Summary:

The Arboretum, primarily developed in 1977-1979 and past the survey target for this study, warrants evaluation once all of its components reach 45 years of age. Although there appear to be eight surviving Valencia orange trees on the campus, including several on the site of the Arboretum, available literature did not reveal their location or origins. Once the components of the Arboretum reach 45 years of age, it is recommended that additional archival research and a subsequent survey, with a team including a preservation professional and arborist, be undertaken.

## 6 Recommendations and Conclusions

---

This study documented the findings of a historic resources survey conducted by Rincon of the CSUF campus. The survey scope included all permanent buildings, aged 45 years or older as of 2019/2020 (i.e., constructed through the year 1975). This project was completed in support of CSUF Master Plan updates. As a result of the CSUF survey, a total of 13 properties were identified as historical resources pursuant to CEQA. This includes one collection of related properties, the Campus Core Historic District.

Per CEQA, for historical resources, the loss of character-defining features and, as a consequence, historic integrity represents a significant adverse impact to historic resources. Under CEQA, for qualifying projects, should the potential exist for an adverse impact to historic resources, it is necessary to conduct further environmental review and study, including impacts analyses and the preparation of mitigation measures and project alternatives.

Rincon presents the following recommendations as preservation management practices as projects for the Master Plan are completed. (This is not an impacts analysis nor are these mitigation measures—these are recommendations and best preservation practices aimed at assisting CSUF to manage its many significant, distinctive historic resources. The impacts analysis and corresponding mitigation measures are included in the EIR completed as part of the Master Plan project.)

### 1. Design Modernization and Upgrade Projects to Comply with the *Secretary's Standards*

For projects involving historic resources, compliance with the *Secretary's Standards* can yield not only better projects that retain the distinctive characteristics of historic properties, districts, and landscape. *Secretary's Standards* compliance also yields a more streamlined CEQA process. Codified in 36 Code of Federal Regulations 67, the *Secretary's Standards* are the industry-recognized guidelines for fostering the preservation, rehabilitation, and maintenance of historic properties (Figure 49). CEQA Guidelines recognize compliance with these standards as the method for avoiding significant adverse impacts to historic resources. According to CEQA Guidelines Section 15064.5(b)(3), projects shown to comply with the *Secretary's Standards* **can generally qualify under CEQA for a Class 31 Categorical Exemption** from further environmental review.

In this way, when it comes to projects affecting historical resources, compliance with the *Secretary's Standards* not only streamlines environmental review and project implementation, it also helps protect significant historic properties. Not all projects that depart from the *Secretary's Standards* automatically result in significant adverse impacts. But *Secretary's Standards* compliance generally ensures that alterations to a historic resource will not result in a loss of historic integrity.

### 2. Commission CSUF Design Guidelines for Historic Resources

In order to streamline project planning and environmental review, it is recommended that CSUF commission focused design guidelines to manage change and upgrades to its historical resources. Design guidelines, rather than providing inflexible, prescriptive requirements, offer general, common-sense approaches for maintaining, repairing, and treating historically significant features and materials. The basic principles of the *Secretary's Standards* are to identify, retain, and preserve the features and materials that convey the significance of historic properties.

Such design guidelines would be tailored to the specific historical resources of CSUF and their character-defining features, as described in this report, as well as the specific upgrade and

modernization projects needed on campus. Drawing on the *Secretary's Standards*, the CSUF design guidelines would help campus architects and facilities staff in the management and upgrades to historic properties. In addition to project-specific guidelines, design guidelines can include information tailored to building components and materials.

**Figure 49 The National Park Service *Secretary's Standards*. Under CEQA, a Categorical Exemption is possible for projects complying with these standards.**

Source: National Park Service, Department of the Interior

### **3. Utilize California Historical Building Code (CHBC) for eligible historic resources properties**

In conjunction with the Department of the State Architect, CSUF can utilize the CHBC for qualifying buildings on a case-by-case basis to plan projects to historic properties that allow for upgrades while also protecting historic integrity

In California, properties that are part of an adopted inventory qualify for building code exemptions under the California Historical Building Code (CHBC).

As codified in Section 8 of the California Code of Regulations, Title 24, the CHBC offers flexibility for code requirements and “requires enforcing agencies to accept solutions that are reasonably equivalent to the regular code (as defined in Chapter 8-2) when dealing with qualified historical buildings or properties.”<sup>165</sup> The CHBC is intended to provide solutions for the preservation of qualified historical buildings or properties, to promote sustainability, to provide access for persons with disabilities, to provide a cost-effective approach to preservation, and to provide for the reasonable safety of the occupants or users.

The use of the CHBC can provide code flexibility to CSUF on a number of fronts. As defined in California Health and Safety Code Section 18955, historical buildings and properties qualifying for use of the CHBC include

Any building, site, object, place, location, district or collection of structures, and their associated sites, deemed of importance to the history, architecture or culture of an area by an appropriate local, state or federal governmental jurisdiction. This shall include historical buildings or properties on, or determined eligible for, national, state or local historical registers or inventories, such as the National Register of Historic Places, California Register of Historical Resources, State Historical Landmarks, State Points of Historical Interest, and city or county registers, inventories or surveys of historical or architecturally significant sites, places or landmarks.<sup>166</sup>

The CHBC offers guidance and alternatives for projects involving Fire Protection (Section 8-4), Means of Egress (Section 8-5), Accessibility (Section 8-6), Structural Regulations (Section 8-7), Archaic Materials and Methods of Construction (Section 8-8), Mechanical, Plumbing and Electrical Requirements (Section 8-9), and Qualified Historical Districts, Sites and Open Spaces (Section 8-10).

Pursuant to Section 18954 of the California Health and Safety Code, the state or local enforcing agency “shall administer and enforce the provisions of the CHBC in permitting repairs, alterations and additions necessary for the preservation, restoration, reconstructions, rehabilitation, relocations or continued use of a qualified historical building or property.”<sup>167</sup> Applications of CHBC exemption to qualifying CSUF properties should be carried out on a case-by-case basis in conjunction with a qualified historic preservation professional.

#### **4. Focus on Noncontributing Lots and Properties for In-fill and Development Projects**

As CSUF continues to expand, it is recommended that future development focus on areas with no historical resources, where possible. Where new construction is adjacent to a historical resource, it is recommended that CSUF design the new construction to be compatible with the adjacent historic property. The Secretary’s Standards for Rehabilitation include guidelines for the design and implementation of new construction adjacent to historic properties. Such in-fill and development projects adjacent to historical resources should be designed in conjunction with a qualified historic preservation professional.

#### **5. Design and Install Interpretive Panels and Exhibit on CSUF History**

As shown in this study, CSUF has a noteworthy history, from its early years as vibrant citrus fields, to the gradual development of CSUF and its current status as one of the most cohesive collections of New Formalist/Late Modern architecture in Fullerton.

It is recommended that, in order to bring this history to life for CSUF staff, faculty, and students, an interpretive program be designed and installed on campus. Such an interpretive program could include information on the campus’s architecture, its development phases, as well as cultural and pre-CSUF history. The research presented in this report provides an ideal starting point for a concise, effective interpretive program that will convey CSUF’s rich history to today’s students, faculty, and community members.

# Minutes • AB 52 Consultation

---

October 8, 2019

## Attendees:

- Sam Dunlap, Cultural Resources Director, Gabrielino Tongva Tribe
- Emil Zordilla, Director of Planning & Design/Campus Architect, Cal State Fullerton
- Anne Collins-Doehne, Principal Environmental Planner, California State University
- Tiffany Clark, Senior Archaeologist, Rincon Consultants, Inc.
- Audrey Eftychiou, Communications Specialist, Capital Programs and Facilities Management, Cal State Fullerton

## Discussion:

All attendees introduced themselves. **Mr. Dunlap** is representing the Gabrielino Tongva Tribe and tribal chair Linda Candelaria. He is also contracted with Cal State Long Beach and other agencies to provide Native American and archaeological monitoring.

**Emil Zordilla** offered a brief description of the Campus Master Plan Preferred Option and the EIR process, including

- Project location slide
- Map of project area
- Proposed housing units
- New academic buildings
- 2-3 transit hubs, depending on bus lines
- Possible parking structure
- Increased campus headcount, from 40,000 to 46,000 (approximate)
- Increased FTEs from 25,000 to 32,000
- NOP process and EIR areas of study

**Mr. Dunlap** stated that he had not yet looked at the plan but that he is very familiar with the EIR process.

- The tribe's main concern would be preservation and protection of any tribal cultural resources, ensuring that they are not simply avoided but properly assessed and mitigated.
- Mitigation measures should spell out steps to be taken prior to construction.

- His questions center on Rincon's records search and any recorded sites on campus or in the vicinity.

**Tiffany Clark** stated that the records search, extending a half-mile from campus, showed several historic structures but no recorded archeological or tribal resources.

**Mr. Dunlap** would like additional information on the project area's history, waterways and topography via USGS maps, and whether any historic artifacts were recovered during previous construction projects. He noted that pre-CEQA, development may have occurred, especially in older cities, without proper protection of archaeological sites.

**Ms. Clark** noted that Rincon had recently completed a cultural resources study for the Eastside 2 Parking Structure, now under construction, and that post-CEQA and over the past 10 years there have been no recorded archaeological materials found during ground disturbance/construction on campus.

**Mr. Dunlap:**

- Explained that Gabrielino territory extends from Malibu to Laguna to Riverside/Beaumont, incorporating roughly 180 cities.
- The Gabrielino Tribe and Gabrielino Tongva Nation have asked Mr. Dunlap to voice their concerns to consulting cities and agencies that they are surrounded by other tribes and that encroachment is an issue.
- There are five Gabrielino tribes in the region. From the original two, a third was formed in 1995, a fourth was formed in 2006 and a fifth was formed in 2008. Mr. Dunlap works with three of the five.
- Tongva is a native word that means "the people," and their vision is to nurture unity within the Gabrielino community.
- The newest faction, the Gabrielino Kizh Nation, "hates" everyone and attempts to discredit other tribes, including the Tongva Nation. Kizh Nation attempts to convince lead agencies to adopt mitigation measures that require engagement/consultation solely with them.
- Mitigation measures specific to one tribe are a problem. Mr. Dunlap recommends generic language that specifies engagement of a monitor "from the Gabrielino tribe/community" within the project area, not from any specific tribal faction.
- The Kizh Nation has used AB 52 as a mechanism to monopolize native monitoring, which has become a competitive enterprise because it generates revenue and employment.
- Mr. Dunlap stated that he offers a competitive rate, "but if the project doesn't need monitoring, I don't want to waste anyone's money."
- The Juanenos' northern border, established through ethnographic study, is Aliso Creek, but the tribe has steadily moved north into Orange County. The Juanenos

may want to consult, but they “have no business here.” Mr. Dunlap represents the Juanenos “when the issue is just” and a claim to the territory is valid.

- It is possible to include multiple monitors from more than one tribe. Examples include Bolsa Chica Mesa in Huntington Beach and the current Mid County Parkway Project. Riverside County Transportation Commission is alternating five tribal monitors week by week.

**Emil Zordilla** asked whether Mr. Dunlap has ever suggested consulting with another tribe for monitoring during construction, or whether tribes are specified up front.

**Mr. Dunlap** stated that certain people specialize in certain areas, such as language, basket weaving, tool making, oral history, spirituality, ceremonies and traditions, so they may be called upon for advice as needed.

**Tiffany Clark** noted that if/when cultural resources are found, the lead agency can bring back the groups who have been consulted and build this in to mitigation to make sure all stakeholders have a voice.

**Mr. Dunlap** inquired about ground disturbance, geotech studies or boring samples – the first three to four feet of soil and sediment are usually indicative of any cultural resources. If a site has been graded and soil redeposited elsewhere, it is still important.

**Anne Collins-Doehne** noted that artificial fill may be sensitive depending on its origin.

**Mr. Dunlap** explained that, in contrast with the Gabrielinos, the Kizh definition of ground disturbance is “boiler plate,” very conservative and shallow. The definition should vary by project and site. A conservative definition spurs unnecessary mitigation that wastes the client’s money.

**Emil Zordilla** asked what the process would be if the lead agency didn’t agree with a tribe’s suggested mitigation measures.

**Anne Collins-Doehne** noted that the law specifies that if there is a disagreement, the tribe must provide evidence.

**Mr. Dunlap** agreed that AB 52 requires consultation only. “Let’s say this corner is highly sacred to the tribe and should be 100% monitored by a tribe or two. I think that would be unreasonable and you would have to call me out on it.”

- Claims are often based on oral histories, but evidence is hard to come by.
- Some tribes regard native monitoring as a good opportunity to make money.
- None of the Gabrielino groups have been intact and continuous for more than 30 years, so there is little documented information available.

**Tiffany Clark** will provide Mr. Dunlap with topographical maps overlaid with the project site.

November 13, 2019

## Attendees:

- Andrew Salas, Gabrieleno-Kizh Nation
- Matthew Teutimez, Gabrieleno-Kizh Nation
- Lexie Salas, Gabrieleno Band of Mission Indians
- Emil Zordilla, Director of Planning & Design/Campus Architect, Cal State Fullerton
- Anne Collins-Doehne, Principal Environmental Planner, California State University
- Tiffany Clark, Senior Archaeologist, Rincon Consultants, Inc.
- Audrey Eftychiou, Communications Specialist, Capital Programs and Facilities Management, Cal State Fullerton

## Discussion:

All attendees introduced themselves. **Andrew Salas** explained his lineage, as son of chief and spiritual leader Ernie Salas, with ties to the San Gabriel Mission Indians as well as some of the area's original Spanish and Mexican landowners and other prominent figures. **Matt Teutimez** is his cousin, as well as the tribal biologist and head of its cultural department. **Lexie Salas** is Andrew's daughter.

**Andrew Salas** explained his tribe's interest in Cal State Fullerton as part of its ancestral area. He expanded on his knowledge of area history, sites and common names.

**Emil Zordilla** gave an overview of the master plan update and the types of academic spaces and amenities that may be added over the next 30 years, contingent on funding, to accommodate growth.

**Tiffany Clark** noted that her firm completed a records search and archaeological report, but no tribal resources were identified, only historic structures. The land was used for orange groves immediately prior to the university's construction.

**Matt Teutimez** noted that the land was occupied by humans for thousands of years before the orange groves. "We help fill in those gaps" of knowledge, he said. His "guesstimate" is that "there was an entire civilization under this campus" due to nearby resources that would attract and support tribes, including oil, level landscapes, unique

ocean resources, water sources and springs, and trade corridors leading throughout the Southwest.

His tribe's concern is primarily with any ground disturbance. He believes tribal resources may have been disturbed during pre-AB 52 construction. There is a "high potential to find resources."

He noted that during today's construction, soil is removed and replaced with imported, compacted soil. During 1960s construction, soil may have been removed and then returned; tribal resources may still be in place, but never recognized. He reported that tribal resources have been found at nearby Hillcrest Park, Chapman University, UC Irvine, Cal State Long Beach and during the 405 Freeway widening.

"Our main goal is to come here and work with you guys, not against you. Our purpose of consulting is that (tribal resources are) meaningful to us. We want to protect the little bit of history we have out there."

**Emil Zordilla** shared that Cal State Fullerton concurs and that the university's goal is to mitigate any disturbances and discuss best practices.

**Matthew Teutimez** shared topographical maps of the Fullerton region and Coyote Hills, showing geographical features, plus hand-drawn missionary routes, village locations, battlefields and trade routes to "back up our oral history." **Mr. Teutimez** and **Mr. Salas** described the natural resources specific to the region (cottonwood, sagebrush, mugwort, etc.) used by native groups, as well as potential seasonal living areas near local hills and waterways. Mr. Salas includes these landscapes within the definition of "tribal resources."

**Emil Zordilla** asked how the tribe usually addresses mitigation.

**Matthew Teutimez** said the tribe seeks to include mitigation in any driving document that calls for on-site monitoring of any ground-disturbing activities.

**Andrew Salas** indicated that the tribe's first priority is avoidance. Second would be mitigation, or an alternative. **Mr. Salas** noted that his group now provides professional reports on tribal resources, prepared at the conclusion of monitoring, using the CEQA structure. He provided an example from Chapman University, documenting the discovery and significance of a 10 cm shaman stone found during construction.

**Emil Zordilla** thanked the group for their information and stories and invited them to send potential mitigation language for consideration.

RE: AB 52 Consultation, CSU Fullerton Master Plan Update Project, Orange County, California

Chairperson Morales:

California State University, Fullerton (CSUF) is preparing an update of the CSUF Master Development Plan (MDP), also known as the 2003 MDP. CSUF certified an Environmental Impact Report for the 2003 MDP in August, 2003. The proposed project is the CSUF Educational and Facilities Master Plan Update, also referred to as the Campus Master Plan (CMP). The CMP is a guide for the future development of the CSUF campus. CSUF is one of 23 campuses which make up the California State University System. According to the CSUF Division of Academic Affairs, CSUF reached the 25,000 on-campus full-time equivalent students (FTES) MDP Ceiling in the 2016-2017 academic year. The CMP is designed to accommodate a 32,000 on-campus FTES ceiling in 2039. This is a total increase of 7,000 FTES, or 28 percent growth. These FTES increases are based on estimates of future demand for CSUF's services. The CMP would accommodate, not cause, these projected FTES increases, which are projected to occur with or without implementation of the CMP.

The project site is the campus of California State University, Fullerton (CSUF), which is located at 800 North State College Boulevard in the City of Fullerton, Orange County, primarily in the block of land between Nutwood Avenue on the south, State College Boulevard on the west, Yorba Linda Boulevard on the north, and State Route 57 (SR 57), the Orange Freeway, on the east. A block of the project site lies across Nutwood Avenue, which lies between Nutwood Avenue to the north, Langsdorf Drive to the east, College Place to the south, and North Commonwealth Avenue to the west. The proposed project is subject to the California Environmental Quality Act (CEQA).

The proposed project must comply with California Public Resources Code § 21080.3.1 (Assembly Bill [AB] 52 of 2014), which requires local governments to conduct meaningful consultation with California Native American tribes that have requested to be notified by lead agencies of proposed projects in the geographic area with which the tribe is traditionally and culturally affiliated.

The input of your tribe is important to CSUF's planning process. Under AB 52, you have 30 days from receipt of this letter to respond in writing to the mailing address listed below if you wish to consult on the proposed project. If you require any additional information or have any questions, please contact me via e-mail at [ezordilla@fullerton.edu](mailto:ezordilla@fullerton.edu) or by telephone at (657) 278-3735. You may also find information at [masterplan.fullerton.edu](http://masterplan.fullerton.edu). Thank you for your assistance.

**Subject:** RE: Inter-Tribal Student Council  
**Date:** Tuesday, October 8, 2019 at 5:46:50 PM Pacific Daylight Time  
**From:** Tiffany Clark  
**To:** Eftychiou, Audrey  
**Attachments:** image002.png, image003.png

Hi Audrey,

It was nice to meet with you today too.

The mailing information I have for Charles Alvarez listed below. I would suggest CSUF re-sending his AB 52 letter as soon as possible and just noting in the correspondence table it was resent and on what date.

***Gabrielino-Tongva Tribe***

Charles Alvarez  
23454 Vanowen Street  
West Hills, CA, 91307  
Phone: (310) 403 - 6048  
roadkingcharles@aol.com

As you noted, no one from the Acjachemen Nation is listed on the NAHC AB 52 list. As such, for the purposes of compliance with AB 52, they do not need to be contacted. If CSUF requests it, Rincon can reach out and ask Ms. Nunez if she has any information on cultural resources in the area. Any information that she provides would be included in the cultural resource report. This would be part of the information gathering effort we do for the cultural resources studies and is not considered AB 52 consultation.

Let me know if you would like to discuss this in more detail or have additional questions.

Thanks,

Tiffany

**Tiffany Clark, PhD, RPA, Senior Archaeologist**

# Minutes • AB 52 Consultation

---

October 8, 2019

## Attendees:

- Sam Dunlap, Cultural Resources Director, Gabrielino Tongva Tribe
- Emil Zordilla, Director of Planning & Design/Campus Architect, Cal State Fullerton
- Anne Collins-Doehne, Principal Environmental Planner, California State University
- Tiffany Clark, Senior Archaeologist, Rincon Consultants, Inc.
- Audrey Eftychiou, Communications Specialist, Capital Programs and Facilities Management, Cal State Fullerton

## Discussion:

All attendees introduced themselves. **Mr. Dunlap** is representing the Gabrielino Tongva Tribe and tribal chair Linda Candelaria. He is also contracted with Cal State Long Beach and other agencies to provide Native American and archaeological monitoring.

**Emil Zordilla** offered a brief description of the Campus Master Plan Preferred Option and the EIR process, including

- Project location slide
- Map of project area
- Proposed housing units
- New academic buildings
- 2-3 transit hubs, depending on bus lines
- Possible parking structure
- Increased campus headcount, from 40,000 to 46,000 (approximate)
- Increased FTEs from 25,000 to 32,000
- NOP process and EIR areas of study

**Mr. Dunlap** stated that he had not yet looked at the plan but that he is very familiar with the EIR process.

- The tribe's main concern would be preservation and protection of any tribal cultural resources, ensuring that they are not simply avoided but properly assessed and mitigated.
- Mitigation measures should spell out steps to be taken prior to construction.

- His questions center on Rincon's records search and any recorded sites on campus or in the vicinity.

**Tiffany Clark** stated that the records search, extending a half-mile from campus, showed several historic structures but no recorded archeological or tribal resources.

**Mr. Dunlap** would like additional information on the project area's history, waterways and topography via USGS maps, and whether any historic artifacts were recovered during previous construction projects. He noted that pre-CEQA, development may have occurred, especially in older cities, without proper protection of archaeological sites.

**Ms. Clark** noted that Rincon had recently completed a cultural resources study for the Eastside 2 Parking Structure, now under construction, and that post-CEQA and over the past 10 years there have been no recorded archaeological materials found during ground disturbance/construction on campus.

**Mr. Dunlap:**

- Explained that Gabrielino territory extends from Malibu to Laguna to Riverside/Beaumont, incorporating roughly 180 cities.
- The Gabrielino Tribe and Gabrielino Tongva Nation have asked Mr. Dunlap to voice their concerns to consulting cities and agencies that they are surrounded by other tribes and that encroachment is an issue.
- There are five Gabrielino tribes in the region. From the original two, a third was formed in 1995, a fourth was formed in 2006 and a fifth was formed in 2008. Mr. Dunlap works with three of the five.
- Tongva is a native word that means "the people," and their vision is to nurture unity within the Gabrielino community.
- The newest faction, the Gabrielino Kizh Nation, "hates" everyone and attempts to discredit other tribes, including the Tongva Nation. Kizh Nation attempts to convince lead agencies to adopt mitigation measures that require engagement/consultation solely with them.
- Mitigation measures specific to one tribe are a problem. Mr. Dunlap recommends generic language that specifies engagement of a monitor "from the Gabrielino tribe/community" within the project area, not from any specific tribal faction.
- The Kizh Nation has used AB 52 as a mechanism to monopolize native monitoring, which has become a competitive enterprise because it generates revenue and employment.
- Mr. Dunlap stated that he offers a competitive rate, "but if the project doesn't need monitoring, I don't want to waste anyone's money."
- The Juanenos' northern border, established through ethnographic study, is Aliso Creek, but the tribe has steadily moved north into Orange County. The Juanenos

may want to consult, but they “have no business here.” Mr. Dunlap represents the Juanenos “when the issue is just” and a claim to the territory is valid.

- It is possible to include multiple monitors from more than one tribe. Examples include Bolsa Chica Mesa in Huntington Beach and the current Mid County Parkway Project. Riverside County Transportation Commission is alternating five tribal monitors week by week.

**Emil Zordilla** asked whether Mr. Dunlap has ever suggested consulting with another tribe for monitoring during construction, or whether tribes are specified up front.

**Mr. Dunlap** stated that certain people specialize in certain areas, such as language, basket weaving, tool making, oral history, spirituality, ceremonies and traditions, so they may be called upon for advice as needed.

**Tiffany Clark** noted that if/when cultural resources are found, the lead agency can bring back the groups who have been consulted and build this in to mitigation to make sure all stakeholders have a voice.

**Mr. Dunlap** inquired about ground disturbance, geotech studies or boring samples – the first three to four feet of soil and sediment are usually indicative of any cultural resources. If a site has been graded and soil redeposited elsewhere, it is still important.

**Anne Collins-Doehne** noted that artificial fill may be sensitive depending on its origin.

**Mr. Dunlap** explained that, in contrast with the Gabrielinos, the Kizh definition of ground disturbance is “boiler plate,” very conservative and shallow. The definition should vary by project and site. A conservative definition spurs unnecessary mitigation that wastes the client’s money.

**Emil Zordilla** asked what the process would be if the lead agency didn’t agree with a tribe’s suggested mitigation measures.

**Anne Collins-Doehne** noted that the law specifies that if there is a disagreement, the tribe must provide evidence.

**Mr. Dunlap** agreed that AB 52 requires consultation only. “Let’s say this corner is highly sacred to the tribe and should be 100% monitored by a tribe or two. I think that would be unreasonable and you would have to call me out on it.”

- Claims are often based on oral histories, but evidence is hard to come by.
- Some tribes regard native monitoring as a good opportunity to make money.
- None of the Gabrielino groups have been intact and continuous for more than 30 years, so there is little documented information available.

**Tiffany Clark** will provide Mr. Dunlap with topographical maps overlaid with the project site.

# Minutes • AB 52 Consultation

---

November 13, 2019

## Attendees:

- Andrew Salas, Gabrieleno-Kizh Nation
- Matthew Teutimez, Gabrieleno-Kizh Nation
- Lexie Salas, Gabrieleno Band of Mission Indians
- Emil Zordilla, Director of Planning & Design/Campus Architect, Cal State Fullerton
- Anne Collins-Doehne, Principal Environmental Planner, California State University
- Tiffany Clark, Senior Archaeologist, Rincon Consultants, Inc.
- Audrey Eftychiou, Communications Specialist, Capital Programs and Facilities Management, Cal State Fullerton

## Discussion:

All attendees introduced themselves. **Andrew Salas** explained his lineage, as son of chief and spiritual leader Ernie Salas, with ties to the San Gabriel Mission Indians as well as some of the area's original Spanish and Mexican landowners and other prominent figures. **Matt Teutimez** is his cousin, as well as the tribal biologist and head of its cultural department. **Lexie Salas** is Andrew's daughter.

**Andrew Salas** explained his tribe's interest in Cal State Fullerton as part of its ancestral area. He expanded on his knowledge of area history, sites and common names.

**Emil Zordilla** gave an overview of the master plan update and the types of academic spaces and amenities that may be added over the next 30 years, contingent on funding, to accommodate growth.

**Tiffany Clark** noted that her firm completed a records search and archaeological report, but no tribal resources were identified, only historic structures. The land was used for orange groves immediately prior to the university's construction.

**Matt Teutimez** noted that the land was occupied by humans for thousands of years before the orange groves. "We help fill in those gaps" of knowledge, he said. His "guesstimate" is that "there was an entire civilization under this campus" due to nearby resources that would attract and support tribes, including oil, level landscapes, unique

ocean resources, water sources and springs, and trade corridors leading throughout the Southwest.

His tribe's concern is primarily with any ground disturbance. He believes tribal resources may have been disturbed during pre-AB 52 construction. There is a "high potential to find resources."

He noted that during today's construction, soil is removed and replaced with imported, compacted soil. During 1960s construction, soil may have been removed and then returned; tribal resources may still be in place, but never recognized. He reported that tribal resources have been found at nearby Hillcrest Park, Chapman University, UC Irvine, Cal State Long Beach and during the 405 Freeway widening.

"Our main goal is to come here and work with you guys, not against you. Our purpose of consulting is that (tribal resources are) meaningful to us. We want to protect the little bit of history we have out there."

**Emil Zordilla** shared that Cal State Fullerton concurs and that the university's goal is to mitigate any disturbances and discuss best practices.

**Matthew Teutimez** shared topographical maps of the Fullerton region and Coyote Hills, showing geographical features, plus hand-drawn missionary routes, village locations, battlefields and trade routes to "back up our oral history." **Mr. Teutimez** and **Mr. Salas** described the natural resources specific to the region (cottonwood, sagebrush, mugwort, etc.) used by native groups, as well as potential seasonal living areas near local hills and waterways. Mr. Salas includes these landscapes within the definition of "tribal resources."

**Emil Zordilla** asked how the tribe usually addresses mitigation.

**Matthew Teutimez** said the tribe seeks to include mitigation in any driving document that calls for on-site monitoring of any ground-disturbing activities.

**Andrew Salas** indicated that the tribe's first priority is avoidance. Second would be mitigation, or an alternative. **Mr. Salas** noted that his group now provides professional reports on tribal resources, prepared at the conclusion of monitoring, using the CEQA structure. He provided an example from Chapman University, documenting the discovery and significance of a 10 cm shaman stone found during construction.

**Emil Zordilla** thanked the group for their information and stories and invited them to send potential mitigation language for consideration.

## Gabrieleno Band of Mission Indians – Kizh Nation

### *Protection of Tribal Cultural Resources (TCRs)*

#### **Most Important Things for Agencies to Know About AB52:**

- An EIR, MND, or ND can not be certified until AB-52 tribal consultation has concluded.
- Agreed mitigation measures with the tribe, **MUST** be recommended for inclusion in the environmental document.
- Signature confirming acceptance of these mitigation measures recommended by our Tribal Government is required within 14 days of receipt to conclude AB52 consultation.

#### **Tribal Cultural Resources Mitigation Measures within Kizh Nation Tribal Territory:**

Note: To avoid compliance issues with the following laws, all Native American Monitoring shall be conducted by a documented lineal descendant from the ancestral Tribe of the project area (NAGPRA Law 10.14)

- The Native American Graves Protection and Repatriation Act (NAGPRA), Public Law-101-601, 25 U.S.C. 3001 et seq., 104 Stat. 3048.
- CEQA Guidelines Section 15064.5, PRC 5097.98 (d)(1).
- The United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP).

*If you are receiving these measures, The Gabrieleno Band of Mission Indians Kizh -Nation are the direct lineal descendants of your project area. The Kizh Nation ONLY responds and consults on projects within their ANCESTRAL tribal territory. Therefore, to remain in compliance with above referenced laws and to enable our Tribe with the ability to protect and preserve our last remaining and irreplaceable Tribal Cultural Resources, it is recommended that the project applicant retain a qualified professional tribal monitor/consultant from the Gabrieleno Band of Mission Indians Kizh -Nation. The Kizh Nation possesses Tribal archives including documented historical information as well as multiple members who possess unique knowledge derived from oral tradition passed down through generations of the Tribe in order to provide the expertise needed to identify whether a project is located within a culturally sensitive area given its proximity to village areas, commerce areas, recreation areas, ceremonial areas, and burial locations.*

#### **Native American Heritage Commission (NAHC) Guidelines for Native American Monitors/Consultants**

**(approved 9/13/05):** By acting as a liaison between Native American, archaeologist, developers, contactors and public agency, a Native American monitor/consultant can ensure that cultural features are treated appropriately from the Native American point of view. This can help others involved in a project to coordinate mitigation measures. These guidelines are intended to provide prospective monitors/consultants, and people who hire monitors/consultants, with an understanding of the scope and extent of knowledge that should be expected.

**Mitigation Guidelines for Tribal Cultural Resources (TCRs):** CEQA now defines TCRs as an independent element separate from archaeological resources. Environmental documents shall address a separate Tribal Cultural Resources section that includes a thorough analysis of the impacts to only TCRs and includes separate and independent mitigation measures created with tribal input under AB-52 consultations. Therefore, all agreements, mitigation, and conditions of approval regarding TCRs shall be handled solely with the Tribal Government and conversely all agreements, mitigation, and conditions of approval regarding Archaeological Resources shall be handled by an Archaeological resource company.

## MITIGATION MEASURES

**Retain a Native American Monitor/Consultant:** The Project Applicant shall be required to retain and compensate for the services of a Tribal monitor/consultant who is both approved by the Gabrieleño Band of Mission Indians-Kizh Nation Tribal Government and is listed under the NAHC's Tribal Contact list for the area of the project location. This list is provided by the NAHC. The monitor/consultant will only be present on-site during the construction phases that involve ground disturbing activities. Ground disturbing activities are defined by the Gabrieleño Band of Mission Indians-Kizh Nation as activities that may include, but are not limited to, pavement removal, pot-holing or auguring, grubbing, tree removals, boring, grading, excavation, drilling, and trenching, within the project area. The Tribal Monitor/consultant will complete daily monitoring logs that will provide descriptions of the day's activities, including construction activities, locations, soil, and any cultural materials identified. The on-site monitoring shall end when the project site grading and excavation activities are completed, or when the Tribal Representatives and monitor/consultant have indicated that the site has a low potential for impacting Tribal Cultural Resources.

**Unanticipated Discovery of Tribal Cultural and Archaeological Resources:** Upon discovery of any tribal cultural or archaeological resources, cease construction activities in the immediate vicinity of the find until the find can be assessed. All tribal cultural and archaeological resources unearthed by project construction activities shall be evaluated by the qualified archaeologist and tribal monitor/consultant approved by the Gabrieleño Band of Mission Indians-Kizh Nation. If the resources are Native American in origin, the Gabrieleño Band of Mission Indians-Kizh Nation shall coordinate with the landowner regarding treatment and curation of these resources. Typically, the Tribe will request preservation in place or recovery for educational purposes. Work may continue on other parts of the project while evaluation and, if necessary, additional protective mitigation takes place (CEQA Guidelines Section 15064.5 [f]). If a resource is determined by the qualified archaeologist to constitute a "historical resource" or "unique archaeological resource", time allotment and funding sufficient to allow for implementation of avoidance measures, or appropriate mitigation, must be available. The treatment plan established for the resources shall be in accordance with CEQA Guidelines Section 15064.5(f) for historical resources.

**Public Resources Code Sections 21083.2(b)** for unique archaeological resources. Preservation in place (i.e., avoidance) is the preferred manner of treatment. If preservation in place is not feasible, treatment may include implementation of archaeological data recovery excavations to remove the resource along with subsequent laboratory processing and analysis. All Tribal Cultural Resources shall be returned to the Tribe. Any historic archaeological material that is not Native American in origin shall be curated at a public, non-profit institution with a research interest in the materials, such as the Natural History Museum of Los Angeles County or the Fowler Museum, if such an institution agrees to accept the material. If no institution accepts the archaeological material, they shall be offered to the Tribe or a local school or historical society in the area for educational purposes.

### **Unanticipated Discovery of Human Remains and Associated Funerary Objects:**

Native American human remains are defined in PRC 5097.98 (d)(1) as an inhumation or cremation, and in any state of decomposition or skeletal completeness. Funerary objects, called associated grave goods in PRC 5097.98, are also to be treated according to this statute. Health and Safety Code 7050.5 dictates that any discoveries of human skeletal material shall be immediately reported to the County Coroner and excavation halted until the coroner has determined the nature of the remains. If the coroner recognizes the human remains to be those of a Native American or has reason to believe that they are those of a Native American, he or she shall contact, by telephone within 24 hours, the Native American Heritage Commission (NAHC) and PRC 5097.98 shall be followed.

### **Resource Assessment & Continuation of Work Protocol:**

Upon discovery of human remains, the tribal and/or archaeological monitor/consultant/consultant will immediately divert work at minimum of 150 feet and place an exclusion zone around the discovery location. The monitor/consultant(s) will then notify the Tribe, the qualified lead archaeologist, and the construction manager who will call the coroner. Work will continue to be diverted while the coroner determines whether the remains are human and subsequently Native American. The discovery is to be kept confidential and secure to prevent any further disturbance. If the finds are determined to be Native American, the coroner will notify the NAHC as mandated by state law who will then appoint a Most Likely Descendent (MLD).

### **Kizh-Gabrieleno Procedures for burials and funerary remains:**

If the Gabrieleno Band of Mission Indians – Kizh Nation is designated MLD, the Koo-nas-gna Burial Policy shall be implemented. To the Tribe, the term “human remains” encompasses more than human bones. In ancient as well as historic times, Tribal Traditions included, but were not limited to, the preparation of the soil for burial, the burial of funerary objects with the deceased, and the ceremonial burning of human remains. The prepared soil and cremation soils are to be treated in the same manner as bone fragments that remain intact. Associated funerary objects are objects that, as part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later; other items made exclusively for burial purposes or to contain human remains can also be considered as associated funerary objects.

### **Treatment Measures:**

Prior to the continuation of ground disturbing activities, the land owner shall arrange a designated site location within the footprint of the project for the respectful reburial of the human remains and/or ceremonial objects. In the case where discovered human remains cannot be fully documented and recovered on the same day, the remains will be covered with muslin cloth and a steel plate that can be moved by heavy equipment placed over the excavation opening to protect the remains. If this type of steel plate is not available, a 24-hour guard should be posted outside of working hours. The Tribe will make every effort to recommend diverting the project and keeping the remains in situ and protected. If the project cannot be diverted, it may be determined that burials will be removed. The Tribe will work closely with the qualified archaeologist to ensure that the excavation is treated carefully, ethically and respectfully. If data recovery is approved by the Tribe, documentation shall be taken which includes at a minimum detailed descriptive notes and sketches. Additional types of documentation shall be approved by the Tribe for data recovery purposes. Cremations will either be removed in bulk or by means as necessary to ensure completely recovery of all material. If the discovery of human remains includes four or more burials, the location is considered a cemetery and a separate treatment plan shall be created. Once complete, a final report of all activities is to be submitted to the Tribe and the NAHC. The Tribe does NOT authorize any scientific study or the utilization of any invasive and/or destructive diagnostics on human remains.

Each occurrence of human remains and associated funerary objects will be stored using opaque cloth bags. All human remains, funerary objects, sacred objects and objects of cultural patrimony will be removed to a secure container on site if possible. These items should be retained and reburied within six months of recovery. The site of reburial/repatriation shall be on the project site but at a location agreed upon between the Tribe and the landowner at a site to be protected in perpetuity. There shall be no publicity regarding any cultural materials recovered.

**Professional Standards:** Archaeological and Native American monitoring and excavation during construction projects will be consistent with current professional standards. All feasible care to avoid any unnecessary disturbance, physical modification, or separation of human remains and associated funerary objects shall be taken. Principal personnel must meet the Secretary of Interior standards for archaeology and have a minimum of 10 years of experience as a principal investigator working with Native American archaeological sites in southern California. The Qualified Archaeologist shall ensure that all other personnel are appropriately trained and qualified.

Dear Ms Davenport,

I apologize for such a late response to the AB52 consultation request. I have reviewed the information sent to me regarding the potential impacts to Tribal cultural resources on the CSU Fullerton campus as it relates to future development on campus properties.

I believe it would be appropriate to include a cultural resource monitoring program within the Master Plan. I would suggest that a Tribal cultural resource monitor that is culturally affiliated to the project area, such as the Gabrielino Tongva Tribe, be considered to be included in such a program.

I would be happy to discuss the implementation of this process when appropriate.

Sincerely,

Sam Dunlap  
Cultural Resource Director  
Gabrielino Tongva Tribe

Subject: CSU Fullerton AB 52 Consultation Informataion Request - Historic Period Maps

Hi Sam,

I pulled together the historic map information you requested last month as part of the AB 52 consultation meeting at California State University Fullerton for the CSUF Master Development Plan Project.

The folder I have attached contains five maps that cover the period between 1894 and 1964. The location of the project area is shown in blue on each map. Please let me know if you have any questions or require additional information.

Thanks,

Tiffany

February 28, 2020

Andrew Salas, Chairperson  
Gabrieleño Band of Mission Indians – Kizh Nation  
PO Box 393  
Covina, CA 91723

RE: Termination of Assembly Bill 52 Consultation for the California State University, Fullerton Campus Master Plan Project, Orange County, California

Dear Chairperson Salas:

The California State University, Fullerton mailed a letter to your office under Assembly Bill (AB) 52 on August 30, 2019 regarding the California State University, Fullerton Campus Master Plan Project. The letter was intended to notify you of the project so that you may request to consult on the project under AB 52 should you choose to do so. The California State University, Fullerton received a request from your office for consultation under AB 52 for the project dated September 12, 2019, and consultation was held on November 13, 2019.

Based on the discussions during the November 2019 meeting and follow up correspondence, California State University, Fullerton is proposing to add the following mitigation measures to the Draft EIR:

**Conduct Native American Monitoring:** Due to the potential to encounter previously undocumented Tribal Cultural Resources within the vicinity of Fullerton Creek, Native American monitors from tribes culturally affiliated to the project area shall be invited by California State University Fullerton, to participate in projects undertaken north of Gymnasium Campus Drive that involve substantial ground disturbance, such as activities extending to previously undisturbed soils, disturbances within 200 feet of known archaeological sites, and/or water sources. California State University, Fullerton shall determine on a project-by-project basis if the extent of proposed ground disturbing activities warrants Native American monitoring. The Native American monitor shall have the authority to temporarily divert, redirect or halt the ground disturbance activities to allow identification, evaluation, and potential recovery of cultural resources.

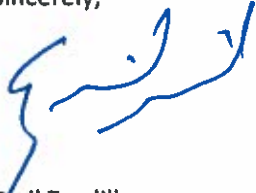

**Unanticipated Discovery of Tribal Cultural Resources:** In the event that cultural resources of Native American origin are identified during construction, all earth-disturbing work in the vicinity of the find shall be temporarily suspended or redirected until an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards has evaluated the nature and significance of the find and an appropriate Native American representative, based on the nature of the find, is consulted. If California State University, Fullerton determines that the resource is a Tribal Cultural Resource and thus significant under CEQA, a mitigation plan shall be prepared and implemented in accordance with state guidelines and in consultation with Native American groups. The plan shall include avoidance of the resource or, if avoidance of the resource is infeasible, the plan shall outline the appropriate treatment and data recovery plan in coordination with the archeologist and the appropriate Native American tribal representative. The Native American monitor and consulting tribe(s) will be provided an opportunity to participate in the documentation and evaluation of the find. If a data recovery plan and treatment of the unanticipated discovery is required, then the consulting tribe(s) will be provided an opportunity to review and provide input on the plan and treatment.

THE CALIFORNIA STATE UNIVERSITY

This letter is intended to formally notify you that the California State University, Fullerton has terminated AB 52 consultation with the Gabireleño Band of Mission Indians – Kizh Nation Tribe regarding the California State University, Fullerton Campus Master Plan project. We look forward to consulting with you on future projects.

Please contact me at 657-278-3735 if you have questions regarding this letter or the consultation process.

Sincerely,

Emil Zordilla

RE: Termination of Assembly Bill 52 Consultation for the California State University, Fullerton Campus Master Plan Project, Orange County, California

Dear Chairperson Morales:

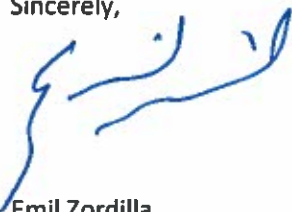

The California State University, Fullerton mailed a letter to your office under Assembly Bill (AB) 52 on August 30, 2019 regarding the California State University, Fullerton Campus Master Plan project. The letter was intended to notify you of the project so that you may request to consult on the project under AB 52 should you so choose.

Under AB 52, the California State University, Fullerton has 30 days to schedule a meeting with a tribe upon receipt of a written request for consultation. The agency has reached out to your office during this 30-day period to schedule a consultation meeting with your organization. The California State University, Fullerton has received no response from your office regarding these attempts to schedule a consultation meeting, and the 30-day scheduling period ended on September 30, 2019. The California State University, Fullerton has demonstrated a good faith effort to open consultation with your organization through our attempts to reach you during the 30-day scheduling period, and now considers our consultation obligations under AB 52 to have been met. No further attempts to schedule a consultation meeting with the Gabrieleño/Tongva San Gabriel Band of Mission Indians will be made.

This letter is intended to formally notify you that the California State University, Fullerton has terminated AB 52 consultation with the Gabrieleño/Tongva San Gabriel Band of Mission Indians regarding the California State University, Fullerton Campus Master Plan project. We look forward to consulting with you on future projects.

Please contact me at 657-278-3735 if you have questions regarding this letter or the consultation process.

Sincerely,

Emil Zordilla  
Director, Office of Planning and Design  
California State University, Fullerton

RE: Termination of Assembly Bill 52 Consultation for the California State University, Fullerton Campus Master Plan Project, Orange County, California

Dear Mr. Dunlap:

The California State University, Fullerton mailed a letter to your office under Assembly Bill (AB) 52 on August 30, 2019 regarding the California State University, Fullerton Campus Master Plan project. The letter was intended to notify you of the project so that you may request to consult on the project under AB 52 should you choose to do so. The California State University, Fullerton received a request from your office for consultation under AB 52 for the project dated September 12, 2019, and consultation was held on October 8, 2019.

Based on the discussions during the October 2019 meeting and follow up correspondence, California State University, Fullerton is proposing to add the following mitigation measures to the Draft EIR:

**Conduct Native American Monitoring:** Due to the potential to encounter previously undocumented Tribal Cultural Resources within the vicinity of Fullerton Creek, Native American monitors from tribes culturally affiliated to the project area shall be invited by California State University Fullerton, to participate in projects undertaken north of Gymnasium Campus Drive that involve substantial ground disturbance, such as activities extending to previously undisturbed soils, disturbances within 200 feet of known archaeological sites, and/or water sources. California State University, Fullerton shall determine on a project-by-project basis if the extent of proposed ground disturbing activities warrants Native American monitoring. The Native American monitor shall have the authority to temporarily divert, redirect or halt the ground disturbance activities to allow identification, evaluation, and potential recovery of cultural resources.

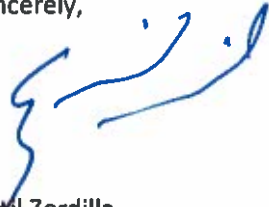

**Unanticipated Discovery of Tribal Cultural Resources:** In the event that cultural resources of Native American origin are identified during construction, all earth-disturbing work in the vicinity of the find shall be temporarily suspended or redirected until an archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards has evaluated the nature and significance of the find and an appropriate Native American representative, based on the nature of the find, is consulted. If California State University, Fullerton determines that the resource is a Tribal Cultural Resource and thus significant under CEQA, a mitigation plan shall be prepared and implemented in accordance with state guidelines and in consultation with Native American groups. The plan shall include avoidance of the resource or, if avoidance of the resource is infeasible, the plan shall outline the appropriate treatment and data recovery plan in coordination with the archeologist and the appropriate Native American tribal representative. The Native American monitor and consulting tribe(s) will be provided an opportunity to participate in the documentation and evaluation of the find. If a data recovery plan and treatment of the unanticipated discovery is required, then the consulting tribe(s) will be provided an opportunity to review and provide input on the plan and treatment.

This letter is intended to formally notify you that the California State University, Fullerton has terminated AB 52 consultation with the Gabrieleño/Tongva Tribe regarding the California State University, Fullerton Campus Master Plan project. We invite you to provide any further comments on the Draft EIR when it is released for public review. We look forward to consulting with you on future projects.

Please contact me at 657-278-3735 if you have questions regarding this letter or the consultation process.

Sincerely,

**Emil Zordilla**

Archaeological Survey Field Notes

**Daily Survey Record - Archaeology**

Project Name: CSU Fullerton Master Plan Update Project Number: 18-06014  
 Rincon Project Manager (RPM): Brenna Weatherly Client: CSU Fullerton  
 Project Location (City, County, State): Fullerton, Orange County, CA  
 Crew Chief: Tricia Dodds Date: 7/15/2019  
 Additional Crew Members (Include any Native American Consultants): NA

Work Start Time: 6:30am Work End Time: 11:30 Total Hours Worked: 5

All Breaks/ Meals Taken (Y/N): Y If No, Explain: \_\_\_\_\_

Equipment:  Vehicle personal  Camera cell phone  Trimble \_\_\_\_\_

Tablet \_\_\_\_\_ Equipment Failures: none

Purchases:  None  Gas  Water  Ice Other: \_\_\_\_\_

Accidents(Y/N): N If Yes, complete an Accident Report and Notify RPM Immediately

Climate: Low: mid 60s °F High: 80s °F Conditions: sunny

Starting Survey Location (UTMs): Zone NW corner m/E \_\_\_\_\_ m/N \_\_\_\_\_

Ending Survey Location (UTMs): Zone NE corner m/E -as a return m/N \_\_\_\_\_

Other Locational Data: CSU Fullerton campus

Transect Orientation: survey exposed ground throughout sub acre Transect Spacing: survey area

**Overall Survey Results and Conditions:** (brief summary of survey including vegetation, geology, cultural resources identified, survey methods and any issues encountered, use Continuation Sheet if needed):

Survey at CSU Fullerton campus. Target exposed ground in between buildings on campus. Area is heavily built and disturbed with a lot of foot/vehicle traffic. Could not access playing fields and baseball fields. All other areas accessible

*Handwritten mark*

Survey Results:  Negative  Positive (Describe below; attach additional sheets as necessary)

Detailed Description of Findings: (assign field numbers to all items recovered, describe all finds, including depths, locational information and key to map; attach additional sheets as necessary, note if existing sites were not relocated)

A lot of the exposed ground has mulch or wood chips on it.  
Vegetation: shrubs, trees <sup>(oak, pine, palm)</sup>, manicured lawns/grasses.  
Soil is semi-compact, dry sandy silt. It is light brown with pebbles and subangular granitic, sandstone rock inclusions.  
Observe lots of modern trash (plastic, cans, paper) on the ground  
Surface coverage ~ 75% with pavement and cement (built environment).  
For abatement in NE corner of survey area, surveyed along paths and open fields.  
No cultural resources observed.  
observe modern debris (bricks, cement) strewn on the ground.

**Subject: Paleontological Resources Assessment for the California State University Fullerton Education and Facilities Master Plan Update Project, Fullerton, Orange County, California**

Dear Mr. Zordilla,

Rincon Consultants, Inc. (Rincon) was retained by California State University, Fullerton to conduct a paleontological resources assessment for the California State University Fullerton (CSUF) Education and Facilities Master Plan Update Project (project) in Orange County, California. The goals of this assessment are to identify the geologic units that may be impacted by development of the project, determine the paleontological sensitivity of geologic units in the project site, assess potential for impacts to paleontological resources from development of the project, and recommend mitigation measures to reduce impacts to scientifically significant paleontological resources, as necessary.

This paleontological resource assessment consisted of a fossil locality record search at the Natural History Museum of Los Angeles County (NHMLAC) and review of existing geologic maps and primary literature regarding fossiliferous geologic units within the project site and vicinity. Following the literature review and records search, this report assessed the paleontological sensitivity of the geologic units underlying the project site, determined the potential for impacts to significant paleontological resources, and proposed mitigation measures to reduce impacts to less than significant. Figures are included in Attachment A.

## Project Description

The project site is entirely developed with the campus of CSUF and encompasses approximately 240 acres within the city of Fullerton, Orange County, California (Attachment A, Figure 1). The project site, located at 800 North State College Boulevard, is generally confined by Nutwood Avenue on the south, State College Boulevard on the west, Yorba Linda Boulevard on the north, and State Route 57 (SR 57), on the east. A section of the project site lies across Nutwood Avenue, which lies between Nutwood Avenue to the north, Langsdorf Drive to the east, College Place to the south, and North Commonwealth Avenue to the west. The project site, situated approximately 6.5 miles east of Fullerton Creek, is depicted on Township 03S, Range 10W, Sections 24-25 of the United States Geological Survey (USGS) La Habra CA 7.5-minute quadrangle.

The proposed CSUF Educational and Facilities Master Plan Update, also referred to as the Campus Master Plan (CMP), is an update of the CSUF Master Development Plan (MDP). The CMP is guide for the future development of the CSUF campus and strategy for modifying the physical campus of CSUF to accommodate expected growth through the year 2039. The CMP presents an overall picture of the future of the CSUF campus and includes recommendations for land use, new construction, enhancement and replacement of existing facilities, mobility networks, and sustainable practices. The project will include addition of new, and replacement of old, academic buildings and housing. The design of these new facilities will provide increased informal learning spaces, distributed throughout existing, new, and exterior spaces. These will be complimented with improved dining and campus living amenities to increase the ability for students to remain on campus before, between, and after classes.

## Regulatory Setting

Fossils are remains of ancient, commonly extinct organisms, and as such are nonrenewable resources. The fossil record is a document of the evolutionary history of life on earth, and fossils can be used to understand evolutionary pattern and process, rates of evolutionary change, past environmental conditions, and the relationships among modern species (i.e., systematics). The fossil record is a valuable scientific and educational resource, and individual fossils are afforded protection under federal, state, and local environmental laws, where applicable. This study has been completed in accordance with the requirements of the California Environmental Quality Act (CEQA) as well as other state regulations applicable to potential paleontological resources in the project site are summarized below.

## California Environmental Quality Act

Paleontological resources are protected under CEQA, which states in part a project will “normally” have a significant effect on the environment if it, among other things, will disrupt or adversely affect a paleontological site except as part of a scientific study. Specifically, in Section VII(f) of Appendix G of the State CEQA Guidelines, the Environmental Checklist Form, the question is posed thus: “Will the project directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.” To determine the uniqueness of a given paleontological resource, it must first be identified or recovered (i.e., salvaged). Therefore, CEQA mandates mitigation of adverse impacts, to the extent practicable, to paleontological resources.

CEQA does not define “a unique paleontological resource or site.” However, the Society of Vertebrate Paleontology (SVP) has defined a “significant paleontological resource” in the context of environmental review as follows:

Fossils and fossiliferous deposits, here defined as consisting of identifiable vertebrate fossils, large or small, uncommon invertebrate, plant, and trace fossils, and other data that provide taphonomic, taxonomic, phylogenetic, paleoecologic, stratigraphic, and/or biochronologic information.

Paleontological resources are typically to be older than recorded human history and/or older than middle Holocene (i.e., older than about 5,000 radiocarbon years) (SVP 2010).

The loss of paleontological resources meeting the criteria outlined above (i.e., a significant paleontological resource) would be a significant impact under CEQA, and the CEQA lead agency is responsible for ensuring that impacts to paleontological resources are mitigated, where practicable, in compliance with CEQA and other applicable statutes.

## California Public Resources Code

Section 5097.5 of the Public Resources Code states:

No person shall knowingly and willfully excavate upon, or remove, destroy, injure or deface any historic or prehistoric ruins, burial grounds, archaeological or vertebrate paleontological site, including fossilized footprints, inscriptions made by human agency, or any other archaeological, paleontological or historical feature, situated on public lands, except with the express permission of the public agency having jurisdiction over such lands. Violation of this section is a misdemeanor.

Here “public lands” means those owned by, or under the jurisdiction of, the state or any city, county, district, authority, or public corporation, or any agency thereof. Consequently, public agencies are required to comply with Public Resources Code Section 5097.5 for their own activities, including construction and maintenance, and for permit actions (e.g., encroachment permits) undertaken by others.

## Methods

Rincon evaluated the paleontological sensitivity of the geologic units that underlie the project site using the results of the paleontological locality search and review of existing information in the scientific literature concerning known fossils in those geologic units. Rincon submitted a request to the NHMLAC for a list of known fossil localities from the project site and immediate vicinity (i.e., localities recorded on the USGS La Habra, California 7.5-minute topographic quadrangle), and reviewed geologic maps and scientific literature.

Rincon assigned a paleontological sensitivity to the geologic units in the project site. The potential for impacts to significant paleontological resources is based on the potential for ground disturbance to directly impact paleontologically sensitive geologic units. The SVP has defined paleontological sensitivity and developed a system for assessing paleontological sensitivity, as discussed below (SVP 2010).

## Paleontological Resource Potential

Significant paleontological resources are determined to be fossils or assemblages of fossils that are unique, unusual, rare, diagnostically important, or are common but have the potential to provide valuable scientific information for evaluating evolutionary patterns and processes, or which could improve our understanding of paleochronology, paleoecology, paleophylogeography, or depositional histories. New or unique specimens can provide new insights into evolutionary history; however, additional specimens of even well represented lineages can be equally important for studying evolutionary pattern and process, evolutionary rates, and paleophylogeography. Even unidentifiable material can provide useful data for dating geologic units if radiocarbon dating is possible. As such, common fossils (especially vertebrates) may be scientifically important, and therefore considered highly significant.

The SVP (2010) describes sedimentary rock units as having high, low, undetermined, or no potential for containing significant nonrenewable paleontological resources. This criterion is based on rock units in which significant fossils have been determined by previous studies to be present or likely to be present. While these standards were written specifically to protect vertebrate paleontological resources, all fields of paleontology have adopted these guidelines, which are given here verbatim:

- I. **High Potential (Sensitivity).** Rock units from which significant vertebrate or significant invertebrate fossils or significant suites of plant fossils have been recovered have a high potential for containing significant non-renewable fossiliferous resources. These units include but are not limited to, sedimentary formations and some volcanic formations which contain significant nonrenewable paleontological resources anywhere within their geographical extent, and sedimentary rock units temporally or lithologically suitable for the preservation of fossils. Sensitivity comprises both (a) the potential for yielding abundant or significant vertebrate fossils or for yielding a few significant fossils, large or small, vertebrate, invertebrate, or botanical and (b) the importance of recovered evidence for new and significant taxonomic, phylogenetic, ecologic, or stratigraphic data. Areas which contain potentially datable organic remains older than Recent, including deposits associated with nests or middens, and areas which may contain new vertebrate deposits, traces, or trackways are also classified as significant.
- II. **Low Potential (Sensitivity).** Sedimentary rock units that are potentially fossiliferous, but have not yielded fossils in the past or contain common and/or widespread invertebrate fossils of well documented and understood taphonomic, phylogenetic species and habitat ecology. Reports in the paleontological literature or field surveys by a qualified vertebrate paleontologist may allow determination that some areas or units have low potentials for yielding significant fossils prior to the start of construction. Generally, these units will be poorly represented by specimens in institutional collections and will not require protection or salvage operations. However, as excavation for construction gets underway it is possible that significant and unanticipated paleontological resources might be encountered and require a change of classification from Low to High Potential and, thus, require monitoring and mitigation if the resources are found to be significant.
- III. **Undetermined Potential (Sensitivity).** Specific areas underlain by sedimentary rock units for which little information is available have undetermined fossiliferous potentials. Field surveys by a qualified vertebrate paleontologist to specifically determine the potentials of the rock units are required before programs of impact mitigation for such areas may be developed.
- IV. **No Potential.** Rock units of metamorphic or igneous origin are commonly classified as having no potential for containing significant paleontological resources.

## Geologic Setting

The project site is in the “petroliferous” Los Angeles Basin, a northwest-trending lowland plain at the northern end of the Peninsular Ranges Province, one of eleven major geomorphic provinces in California (California Geological Survey 2002). A geomorphic province is a region of unique topography and geology that is readily distinguished from other regions based on its landforms and diastrophic history (Norris and Webb 1990). The Los Angeles Basin is approximately 60 miles long and 35 miles wide and is defined by Yerkes et al. (1965) as the region bounded by the northern foothills of the Santa Monica Mountains to the north, the San Jose Hills and the Chino fault on the east, and the Santa Ana Mountains and San Joaquin Hills in the southeast. The Los Angeles Basin is underlain by a structural depression that was the site of extensive accumulation of interstratified fluvial, alluvial, floodplain, shallow marine and deep shelf deposits on underlying Mesozoic metamorphic and granitic plutonic basement rocks. Sediment accumulation and subsidence has occurred there since the Late Cretaceous and has reached a maximum thickness of more than 20,000 feet (McCulloh and Beyer 2004; Norris and Webb 1990; Yerkes et al. 1965). During that time, rise and fall of relative sea level, tectonic uplift and subsidence, and Pleistocene glaciation resulted in marine and terrestrial sedimentary deposition throughout the Los

Angeles Basin (Beyer 1995; McCulloh and Beyer 2004). The Los Angeles Basin contains several major fault zones, including the Newport-Inglewood fault zone in the vicinity of the project site (Morton and Miller 2006; Yerkes et al. 1965).

The project is located in the Santa Ana Valley in Orange County, within the southeastern portion of the Los Angeles Basin (Morton and Miller 2006; Yerkes et al. 1965). According to published geologic mapping, the project site is entirely underlain by young Quaternary (Holocene) alluvium (Qa) (Dibblee and Ehrenspeck, 2001; Morton and Miller, 2006) (Attachment A, Figure 2). These sediments are composed of unconsolidated sand, silt, and clay derived as alluvial fan deposits from the Chino Hills to the north and from the East Coyote Hills to the northwest via Fullerton Creek. Nearby exposures of the La Habra Formation (Qlh, Qlhc) and older Quaternary (Pleistocene) alluvium (Qoa) indicate these units may occur at depth within the project site. The La Habra Formation, exposed just northwest of the project site, is Pleistocene in age and consists of mudstone, sandstone, and a basal conglomerate (Dibblee and Ehrenspeck 2001). Older Quaternary (Pleistocene) alluvial deposits exposed north of the project site are composed of weakly to moderately-consolidated gravel and conglomerate, conglomeratic sandstone, and siltstone. The depth at which the Pleistocene strata underlies the surficial Holocene alluvium in the project site is unknown but may as shallow as eight feet below ground surface (bgs), based on depth of recovery for nearby vertebrate fossil localities (McLeod 2019).

Intact Holocene alluvial deposits in the project site are too young to preserve paleontological resources; however, at moderate depth, the Holocene sediments may grade into older deposits of late Pleistocene age that could preserve fossil remains, including older Quaternary alluvium or the La Habra Formation. The La Habra Formation has yielded numerous terrestrial vertebrate fossils such as rabbit, deer, horse, camel, and sloth (Eisentraut and Cooper 2003; Rivin and Sutton 2010). As well, Pleistocene sedimentary deposits have a well-documented record of abundant and diverse vertebrate fauna throughout California, especially within the Los Angeles Basin. Fossil specimens of whale, sea lion, horse, ground sloth, bison, camel, mammoth, dog, pocket gopher, turtle, ray, bony fish, shark, and bird have been reported (Agenbroad 2003; Bell et al. 2004; Jefferson 1985, 1989, 1991; Maguire and Holroyd 2016; Merriam 1911; Reynolds et al. 1991; Savage 1951; Savage et al. 1954; Scott and Cox 2008; Springer et al. 2009; Tomiya et al. 2011; Wilkerson et al. 2011; Winters 1954; University of California Berkeley Museum of Paleontology 2019).

## Results

### Locality Search

A search of the paleontological locality records at the NHMLAC resulted in no previously recorded fossil localities in the project site; however, several vertebrate localities have been recorded nearby within older Quaternary alluvial deposits and the La Habra Formation. The closest vertebrate fossil locality to the project site (LACM 1652) is located approximately 2.75 miles to the southeast of the project site near the intersection of Rio Vista Avenue and Lincoln Avenue, which yielded a fossil specimen of sheep (*Ovis*). The depth of recovery for fossil locality LACM 1652 was unreported. LACM 4943, located approximately three miles to the southeast of the project site near the intersection of Fletcher Avenue and Glassell Street, yielded a specimen of fossil horse (*Equus*) from Pleistocene age deposits at a depth of eight to ten feet bgs. LACM 6472, located approximately three miles in the Coyote Hills adjacent and northwest of the project site, produced a specimen of fossil horse (*Equus*) from the La Habra Formation, which may occur at depth in the project site (McLeod 2019).

## Paleontological Sensitivity

In accordance with SVP (2010) guidelines, Rincon determined the paleontological sensitivity of the project site based on a literature review and museum locality search. The results of the study indicate that the geologic units underlying the project site have a paleontological sensitivity ranging from low to high. Younger Quaternary alluvial deposits mapped at the surface of the project site have been assigned a low paleontological sensitivity because Holocene sedimentary deposits, particularly those younger than 5,000 years old, are generally too young to contain fossilized material. The Holocene sediments may be underlain by Pleistocene deposits or La Habra Formation at a moderate depth of approximately eight feet bgs. The Pleistocene deposits and La Habra Formation have been assigned a high paleontological resource sensitivity based on the results of the NHMLAC records search (McLeod 2019). Refer to Table 1 for paleontological sensitivity in the project site.

**Table 1 Paleontological Sensitivity of the Geologic Units in the Project Site**

Geologic Unit <sup>1</sup>	Unit Symbol	Typical Fossils <sup>2</sup>	Paleontological Sensitivity <sup>3</sup>	Recommended Monitoring
Quaternary Alluvium	Qa	None	Low at surface	<b>At or below eight feet</b> (depth where unit may overlie older sensitive deposits)
Older Quaternary Alluvium (not mapped at the surface of the project site, but may be present in the subsurface)	Qoa	Terrestrial and marine mammals	High	<b>Yes</b> (may be present at eight feet or more beneath Holocene alluvium)
La Habra Formation (not mapped at the surface of the project site, but may be present in the subsurface)	Qlh, Qlhc	Terrestrial mammals	High	<b>Yes</b> (may be present at eight feet or more beneath Holocene alluvium)

## Findings and Recommendations

Ground-disturbing activities in previously undisturbed portions of the project underlain by geologic units with a high paleontological sensitivity (i.e., older Quaternary alluvial deposits or La Habra Formation) may result in significant impacts to paleontological resources under Appendix G of State CEQA Guidelines. Impacts would be significant if construction activities result in the destruction, damage, or loss of scientifically important paleontological resources and associated stratigraphic and paleontological data. The activities may include grading, excavation, or other activities that disturb substantial quantities of the surface or subsurface geologic units with a high paleontological sensitivity. Based on the findings of the NHMLAC, Holocene alluvium overlies the paleontologically-sensitive Pleistocene alluvium to a depth of approximately eight feet bgs; therefore, impacts to paleontological resources are not expected above eight feet bgs (McLeod 2019).

The following recommended mitigation would address the potentially significant impacts relating to the possible discovery of paleontological resources during project implementation. These measures would apply to all phases of project construction and would ensure that any significant fossils present on-site are preserved. Implementation of the following recommended mitigation measures would reduce

potential project impacts to paleontological resources to a less-than-significant level by requiring paleontological resource studies for projects in high sensitivity geological units within the CSUF Master Plan Update and implementation of further requirements to avoid or reduce impacts to such resources on a project-by-project basis. The following mitigation measures shall be added to the CSUF Master Plan Update:

1. **Retain a Qualified Paleontologist.** Prior to the commencement of ground disturbing activities, a qualified professional paleontologist shall be retained to review all project plans where ground disturbance is expected to occur at or below eight feet bgs within areas mapped as Holocene alluvial deposits (Qa) to determine if underlying paleontologically sensitive units (i.e., Pleistocene age deposits or the La Habra Formation) could be impacted. If potentially significant impacts are identified, the qualified professional paleontologist shall prepare and implement a Paleontological Resources Mitigation Plan (PRMP) for the project. A Qualified Paleontologist is an individual who meets the education and professional experience standards as set forth by the SVP (2010), which recommends the paleontologist shall have at least a Master's Degree or equivalent work experience in paleontology, shall have knowledge of the local paleontology, and shall be familiar with paleontological procedures and techniques. The PRMP shall describe mitigation recommendations in detail, including paleontological monitoring procedures; communication protocols to be followed in the event that an unanticipated fossil discovery is made during project development; and preparation, curation, and reporting requirements.
2. **Paleontological Worker Environmental Awareness Program (WEAP).** Prior to the start of construction, the Qualified Paleontologist or his or her designee, shall conduct training for construction personnel regarding the appearance of fossils and the procedures for notifying paleontological staff should fossils be discovered by construction staff. The WEAP shall be fulfilled at the time of a preconstruction meeting. In the event a fossil is discovered by construction personnel anywhere in the project site, all work in the immediate vicinity of the find shall cease and a qualified paleontologist shall be contacted to evaluate the find before re-starting work in the area. If it is determined that the fossil(s) is (are) scientifically significant, the qualified paleontologist shall complete the mitigation outlined below to mitigate impacts to significant fossil resources.
3. **Paleontological Monitoring.** Initially, full-time monitoring shall be conducted during ground construction activities (i.e., grading, trenching, foundation work, and other excavations) in areas where ground disturbance would occur at or below eight feet bgs within intact Holocene deposits. Monitoring shall be conducted by a qualified paleontological monitor, who is defined as an individual who meets the minimum qualifications per standards set forth by the SVP (2010), which includes a B.S. or B.A. degree in geology or paleontology with one year of monitoring experience and knowledge of collection and salvage of paleontological resources. The duration and timing of the monitoring shall be determined by the Qualified Paleontologist and the location and extent of proposed ground disturbance. If the Qualified Paleontologist determines that full-time monitoring is no longer warranted, based on the specific geologic conditions at the surface or at depth, the Qualified Paleontologist may recommend that monitoring be reduced to periodic spot-checking or cease entirely.
4. **Fossil Discovery, Preparation, and Curation.** If a paleontological resource is discovered, the monitor shall have the authority to temporarily divert the construction equipment around the find until it is assessed for scientific significance and collected. Typically, fossils can be safely salvaged quickly by a single paleontologist and not disrupt construction activity. In some cases, larger fossils (such as complete skeletons or large mammals) require more extensive excavation

and longer salvage periods. In this case, the paleontologist should have the authority to temporarily direct, divert or halt construction activity to ensure that the fossil(s) can be removed in a safe and timely manner.

Once salvaged, significant fossils shall be identified to the lowest possible taxonomic level, prepared to a curation-ready condition and curated in a scientific institution with a permanent paleontological collection (such as the NHMLAC) along with all pertinent field notes, photos, data, and maps. The cost of curation is assessed by the repository and is the responsibility of the project owner.

5. **Final Paleontological Mitigation Report.** At the conclusion of laboratory work and museum curation, a final report shall be prepared describing the results of the paleontological mitigation monitoring efforts associated with the project. The report shall include a summary of the field and laboratory methods, an overview of the project geology and paleontology, a list of taxa recovered (if any), an analysis of fossils recovered (if any) and their scientific significance, and recommendations. The final report shall be submitted to the CSUF. If the monitoring efforts produced fossils, then a copy of the report shall also be submitted to the designated museum repository.

If you have any questions regarding this Paleontological Resource Assessment, please contact us.

Sincerely,

jmendieta@rinconconsultants.com

**Date:** June 17, 2019

**Re:** Paleontology records search request  
Rincon Project # 18-06014, California State University Fullerton Master Plan  
Project

---

I would like to request a paleontological records search of one USGS 7.5-minute topographic map quadrangle within Orange County as follows:

1. La Habra

I have enclosed a map showing the project area (solid black line), within which potential disturbance could occur. This map also shows the townships, ranges, and sections relative to the project area. Please disregard the half-mile buffer (dotted yellow line) and search only the quadrangle listed above.

To facilitate our evaluation and analysis of paleontological sensitivity and potential impacts to paleontological resources, please identify all fossil localities that occur within the quadrangle(s) and/or within the vicinity. Also, please include as much location detail as you are able in your write up, such as distance from the project area, or townships, ranges, and sections.

Sincerely,

A handwritten signature in black ink, appearing to read "Jorge Mendieta".

Jorge Mendieta  
Rincon Consultants, Inc.

# 1. Project Description and Project Setting

This report presents the analysis and findings of a Transportation Impact Study (TIS) prepared for the California State University, Fullerton (CSU Fullerton) Master Plan Update (Project) in the City of Fullerton (City), California. This chapter discusses the TIS purpose, Project description and setting, and analysis locations and scenarios.

## Study Purpose

The purpose of this study is to evaluate the transportation impacts of the Project consistent with the requirements of the *California State University Transportation Impact Study Manual (March 2019)*.

## Project Description and Project Setting

The Project will update the current Master Plan with a new land use plan, updated full time equivalent student (FTES) projections, and an increase in anticipated employees and faculty members. The FTES is projected to increase from 25,000 (current) to 32,000 by horizon year 2040. The Project will also add 1,000 new employees and 3,000 new on-campus beds.

The Project site is located in the eastern part of Fullerton. The CSU Fullerton campus is bounded by Yorba Linda Boulevard to the north, Nutwood Avenue to the south, State Route (SR) 57 to the east, and State College Boulevard to the west. **Figure 2** shows the Project site and vicinity and analysis locations.

## Roadway Network

Regional access to the site is provided by SR 57, SR 90, and SR 91. Local access to the site is provided by Associated Road, Bastanchury Road, Bradford Avenue, Chapman Avenue, Commonwealth Avenue, Fender Avenue, Nutwood Avenue, Placentia Avenue, Primrose Avenue, State College Boulevard, and Yorba Linda Boulevard. The following discusses the roadways that would provide access to the site and are most likely to experience direct traffic impacts, if any, from the proposed Project.

## Regional Roadways

**SR 57**, also known as the Orange Freeway, provides north-south regional access between Orange and Los Angeles Counties with five travel lanes and one carpool lane in each direction. SR 57 provides access to the Project via the Yorba Linda Boulevard and Nutwood Avenue interchanges.

**SR 90**, also known as the Imperial Highway, provides east-west regional access between Orange and Los Angeles Counties with three travel lanes in each direction. SR 90 connects to SR 57 north of the Project site.

**SR 91**, also known as the Riverside Freeway, provides east-west regional access between Los Angeles, Orange, and Riverside Counties with four travel lanes and one carpool lane in each direction. SR 91 connects to SR 57 south of the Project site.

## Local Roadways

Roadway classifications from *The Fullerton Plan 2030* (2012) and field observations of existing conditions were used in the following local roadway descriptions:

**Associated Road** is classified as a Secondary Arterial Highway with four undivided travel lanes. It provides north-south mobility with direct access to the Project site. The posted speed limit is 40 miles per hour (MPH). Associated Road continues south of Yorba Linda Boulevard in the Master Plan area as N Campus Drive.

**Bastanchury Road** is classified as a Major Arterial Highway with four-to five divided travel lanes north of the Project site. It provides east-west mobility and connects to roadways with direct access to the Project site. The posted speed limit is 50 MPH.

**Bradford Avenue** is classified as a Secondary Arterial with two undivided travel lanes east of the Project site. It provides north-south mobility and connects to roadways with direct access to the Project site. The posted speed limit is 35 MPH.

**Chapman Avenue** is classified as a Major Arterial Highway east of State College Boulevard with five divided travel lanes and classified as a Primary Arterial Highway west of State College Boulevard with four divided travel lanes. It lies southwest of the Project site, providing east-west mobility and connection to roadways with direct access to the Project site. The posted speed limit is 40 MPH.

**Commonwealth Avenue** is classified as a Primary Arterial Highway with four undivided travel lanes west of State College Blvd. Between State College Boulevard and Nutwood Avenue it provides two-to four divided travel lanes. It provides east-west mobility and connects to roadways with direct access to the Project site. The posted speed limit is 40 MPH.

**Fender Avenue** is classified as a Residential Street with two undivided travel lanes south of the Project site. It provides east-west mobility and connects to roadways with direct access to the Project site. The posted speed limit is 25 MPH.

**Nutwood Avenue** is classified as a Primary Arterial Highway with six divided travel lanes south of the Project site. It provides east-west mobility and direct access to the Project site. The posted speed limit is 35 MPH. Nutwood Avenue provides direct access to internal roadways within the Master Plan area.

**Placentia Avenue** is classified as a Primary Arterial Highway with four divided travel lanes east of the Project site. It provides north-south mobility and connects to roadways with direct access to the Project site. The posted speed limit is 40 MPH.

**Primrose Avenue** is classified as a Local Collector Street with two undivided travel lanes east of the Project site. It provides north-south mobility and connects to roadways with direct access to the Project site. The posted speed limit is 15 MPH.

**State College Boulevard** is classified as a Major Arterial Highway with six divided travel lanes west of the Project site. It provides north-south mobility with direct access to the Project site. The posted speed limit is 40 MPH. State College Boulevard provides direct access to internal roadways within the Master Plan area.

**Yorba Linda Boulevard** is classified as a Major Arterial Highway with six divided travel lanes north of the Project site. It provides east-west mobility with direct access to the Project site. The posted speed limit is 40 MPH. Yorba Linda Boulevard provides direct access to internal roadways within the Master Plan area.

## Pedestrian and Bicycle Facilities

Pedestrian facilities include sidewalks, crosswalks, and pedestrian signals. Sidewalks are provided on both sides of the major roads that bound the campus area: State College Boulevard, Nutwood Avenue, and Yorba Linda Boulevard. At signalized intersections in the study area, crosswalks and pedestrian push-button actuated signals are provided.

Bicycle facilities and descriptions are as follows:

- **Bike paths (Class I)** – Bike paths provide a separate right-of-way and are designated for the exclusive use of people riding bicycles and walking with minimal cross-flow traffic. Such paths can be well situated along creeks, canals, and rail lines. Class I Bikeways can also offer opportunities not provided by the road system by serving as both recreational areas and/or desirable commuter routes.

- **Bike lanes (Class II)** – Bike lanes provide designated street space for bicyclists, typically adjacent to the outer vehicle travel lanes. Bike lanes include special lane markings, pavement legends, and signage. Bike lanes may be enhanced with painted buffers between vehicle lanes and/or parking, and green paint at conflict zones (such as driveways or intersections).
- **Bike routes (Class III)** – Bike routes provide enhanced mixed-traffic conditions for bicyclists through signage, striping, and/or traffic calming treatments, and to provide continuity to a bikeway network. Bike routes are typically designated along gaps between bike trails or bike lanes, or along low-volume, low-speed streets. Bicycle boulevards provide further enhancements to bike routes to encourage slow speeds and discourage non-local vehicle traffic via traffic diverters, chicanes, traffic circles, and/or speed tables. Bicycle boulevards can also feature special wayfinding signage to nearby destinations or other bikeways.
- **Separated Bikeway (Class IV)** – Separated bikeways, also referred to as cycle tracks or protected bikeways, are bikeways for the exclusive use of bicycles which are physically separated from vehicle traffic. Separated Bikeways were recently adopted by Caltrans in 2015. Types of separation may include, but are not limited to, grade separation, flexible posts, physical barriers, or on-street parking.

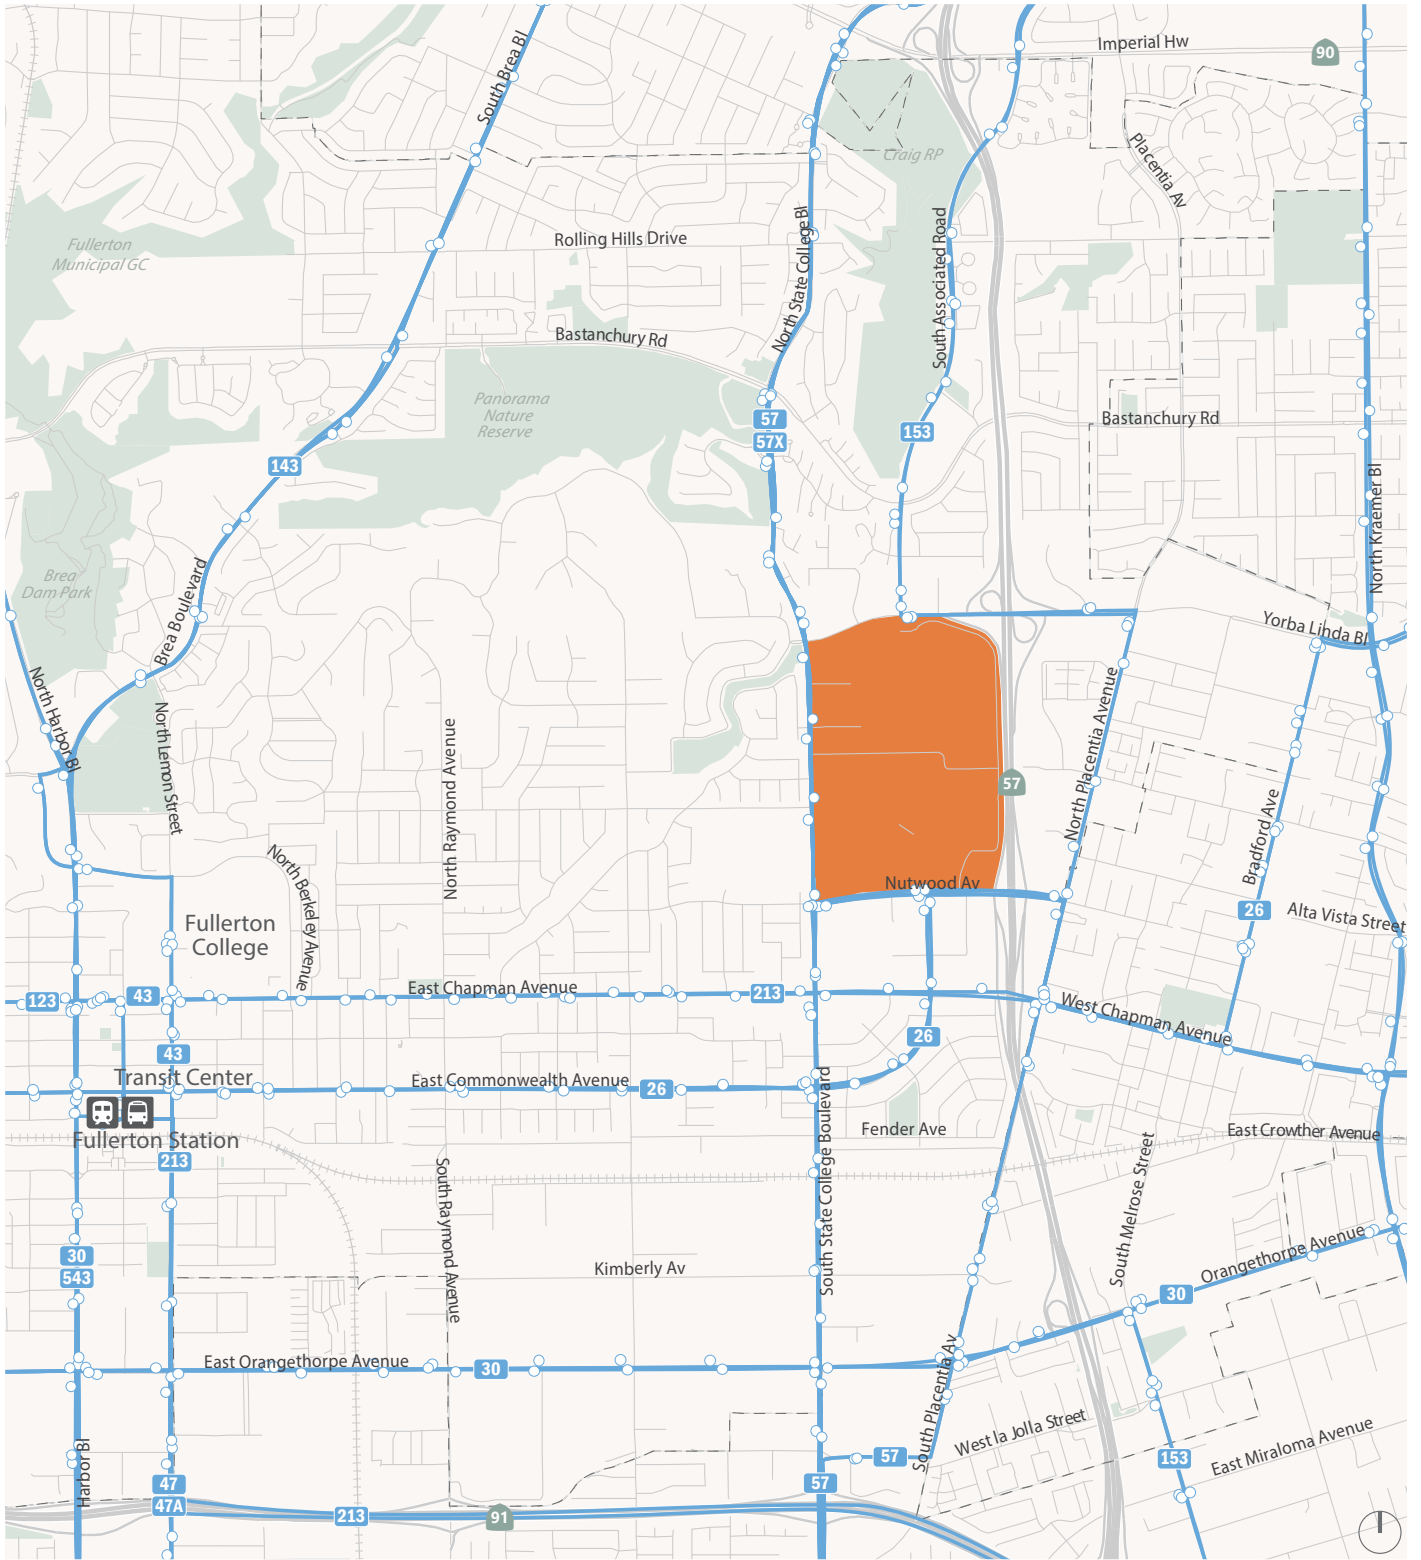

Existing and proposed bicycle and pedestrian facilities in the Project vicinity are described below based on field observations and the *Fullerton Bicycle Master Plan (2012)* and the *Fullerton Bike Connection Plan (2017)*:

- Existing Class II bike facilities provide connections to the campus area on Associated Road, Dorothy Lane, and Commonwealth Avenue
- Nutwood Avenue does not have existing bicycle facilities. The Fullerton Bicycle Master Plan includes planned Class III on Nutwood Avenue Yorba Linda Boulevard from State College Boulevard to Placentia Avenue. The Fullerton Bike Connection Plan includes Class II bike lanes on Nutwood Ave between State College Blvd and Placentia Ave, with buffers accompanying the bike lanes intermittently as the cross section allows,
- Yorba Linda Boulevard does not have existing bicycle facilities. The Fullerton Bicycle Master Plan includes planned Class III facilities on Yorba Linda Boulevard from State College Boulevard to Associated Road. The Fullerton Bike Connection Plan includes Class II bike lanes on both sides of Yorba Linda Blvd between SR 57 NB ramps and SR 57 SB ramps, and a Class II bike lane on eastbound Yorba Linda and a Class III facility on westbound Yorba Linda between Campus Drive and Oxford drive.
- State College Boulevard does not have existing bicycle facilities and are not proposed in the future.

- A new bicycle overcrossing is proposed on SR 57, it would provide a Class I path and would connect the campus to Placentia Avenue.

## Transit Facilities

Transit service in the study area is offered by CSU Fullerton, Orange County Transportation Authority (OCTA), Metrolink, and Amtrak. **Figure 1** shows the various transit routes within two miles of the Project providing access to the study area.

Project Site
  # OCTA Bus Route
  Bus Stop

Figure 1

## Existing Transit Facilities

## Campus Shuttle

CSU Fullerton offers a free shuttle from the First Evangelical Free Church parking lot at the northwest corner of Brea Boulevard and Bastanchury Road to the campus Parking and Transportation Services Office. The shuttle service runs every 10 to 15 minutes on Monday through Thursday between approximately 7:30 AM and 7:30 PM.

## Orange County Transportation Authority

OCTA provides public transportation service throughout Orange County, California. OCTA bus routes within two miles of the Project site include:

**Route 26 (Fullerton to Placentia)** runs weekdays between approximately 4:45 AM and 11:00 PM with variable headways of about 15 to 60 minutes. Route 26 runs on weekends and holidays between approximately 7:00 AM and 7:30 PM with variable headways of about 40 to 70 minutes.

**Route 30 (Cerritos to Anaheim)** runs weekdays between approximately 4:15 AM and 11:00 PM with variable headways of about 25 to 40 minutes. On weekends and holidays, it runs between approximately 6:15 AM and 9:00 PM with headways of about 65 minutes.

**Route 43 (Fullerton to Costa Mesa)** runs weekdays between approximately 3:45 AM and 1:45 AM with variable headways of about 15 to 60 minutes. On weekends and holidays, it runs between approximately 4:00 AM and 1:45 AM with variable headways of about 20 to 60 minutes.

**Route 57/57X (Brea to Newport Beach)** runs weekdays between approximately 3:55 AM and 2:15 AM with variable headways of about 15 to 60 minutes. On weekends and holidays, it runs between approximately 4:00 AM and 2:00 AM with variable headways of about 15 to 60 minutes. Route 57X is the express version of Route 57 with limited stops.

**Route 123 (Buena Park to Orange)** runs weekdays between approximately 5:30 AM and 9:00 PM with headways of about 60 minutes. Route 123 does not operate on the weekend.

**Route 129 (La Habra to Anaheim)** runs weekdays between approximately 5:30 AM and 9:15 PM with variable headways of about 40 to 65 minutes. On Saturdays, it runs between approximately 6:00 AM and 9:15 PM with headways of about 35 to 60 minutes. On Sundays and holidays, it runs between approximately 7:00 AM and 8:15 PM with headways of about 45 to 55 minutes.

**Route 143 (La Habra to Brea)** runs weekdays between approximately 4:30 AM and 11:00 PM with variable headways of about 65 to 75 minutes. On Saturdays, it runs between approximately 6:15 AM and 9:30 PM

with headways of about 65 minutes. On Sundays and Holidays, it runs between approximately 6:15 AM and 8:15 PM with headways of about 65 minutes.

**Route 153 (Brea to Anaheim)** runs weekdays between approximately 4:20 AM and 10:25 PM with variable headways of about 60 to 70 minutes. On Saturdays, it runs between approximately 6:00 AM and 8:45 PM with variable headways of about 55 to 65 minutes. On Sundays and holidays, it runs between approximately 7:00 AM and 7:45 PM with variable headways of about 55 to 65 minutes.

**Route 213 (Brea to Irvine Express)** runs weekdays between approximately 5:10 AM and 7:25 AM in the morning from Brea to Irvine and between approximately 4:05 PM and 7:15 PM in the evening. Variable headways are about 5 to 35 minutes.

## Metrolink and Amtrak Rail Service

Metrolink and Amtrak service the study area at the Fullerton Station. OCTA routes that connect to the Fullerton Station include Routes 26, 43, 47, 213, and BRAVO 543.

### Metrolink - Orange County Line

Metrolink provides regional rail service in the Greater Los Angeles region. The Orange County line runs from Oceanside to Los Angeles between approximately 4:35 AM and 11:55 PM on weekdays and between approximately 8:15 AM and 8:00 PM on weekends. On weekdays, the Orange County line stops at the Fullerton Station between approximately 4:45 AM and 10:30 PM with variable headways of about 15 to 90 minutes. On weekends, the Orange County line stops at the Fullerton Station between approximately 9:15 AM and 7:00 PM with variable headways of about 120 to 130 minutes.

### Amtrak - Pacific Surfliner

Amtrak provides rail service through California and other states. The Pacific Surfliner line that overlaps the Metrolink Orange County line runs daily between approximately 4:10 AM and 12:10 AM. The Pacific Surfliner stops at the Fullerton Station on weekdays between approximately 6:10 AM and 11:10 PM with variable headways of about 45 to 125 minutes. The Pacific Surfliner stops at the Fullerton Station on weekends between approximately 6:35 AM and 11:10 PM with variable headways of about 45 to 125 minutes.

## Analysis Locations and Scenarios

The scope of the traffic analysis and selection of study roadway segments were developed in consultation with the Project team.

**Figure 2** identifies the 13 study roadway segments:

1. State College Boulevard from State Route (SR) 91 to Fender Avenue
2. State College Boulevard from Fender Avenue to Nutwood Avenue
3. State College Boulevard from Nutwood Avenue to Yorba Linda Boulevard
4. State College Boulevard from Yorba Linda Boulevard to State Route (SR) 90
5. Nutwood Avenue from State College Boulevard to SR 57
6. Nutwood Avenue/Primrose Avenue from SR 57 to Bradford Avenue
7. Yorba Linda Boulevard from State College Boulevard to Placentia Avenue
8. E Chapman Avenue from State College Boulevard to SR 57
9. E Chapman Avenue from SR 57 to Bradford Avenue
10. Associated Road from SR 90 to Bastanchury Road
11. Associated Road from Bastanchury Road to Yorba Linda Boulevard
12. Commonwealth Avenue from Nutwood Avenue to Chapman Avenue
13. Commonwealth Avenue from Chapman Avenue to State College Boulevard

The study assumes the Project would be completed by year 2040 and is directed at analyzing the potential Roadway segment forecasts and VMT assessments are provided for the following scenarios in this study:

- Baseline (2019) No Project
- Baseline (2019) With Project
- Future Year (2040) No Project
- Future Year (2040) With Project

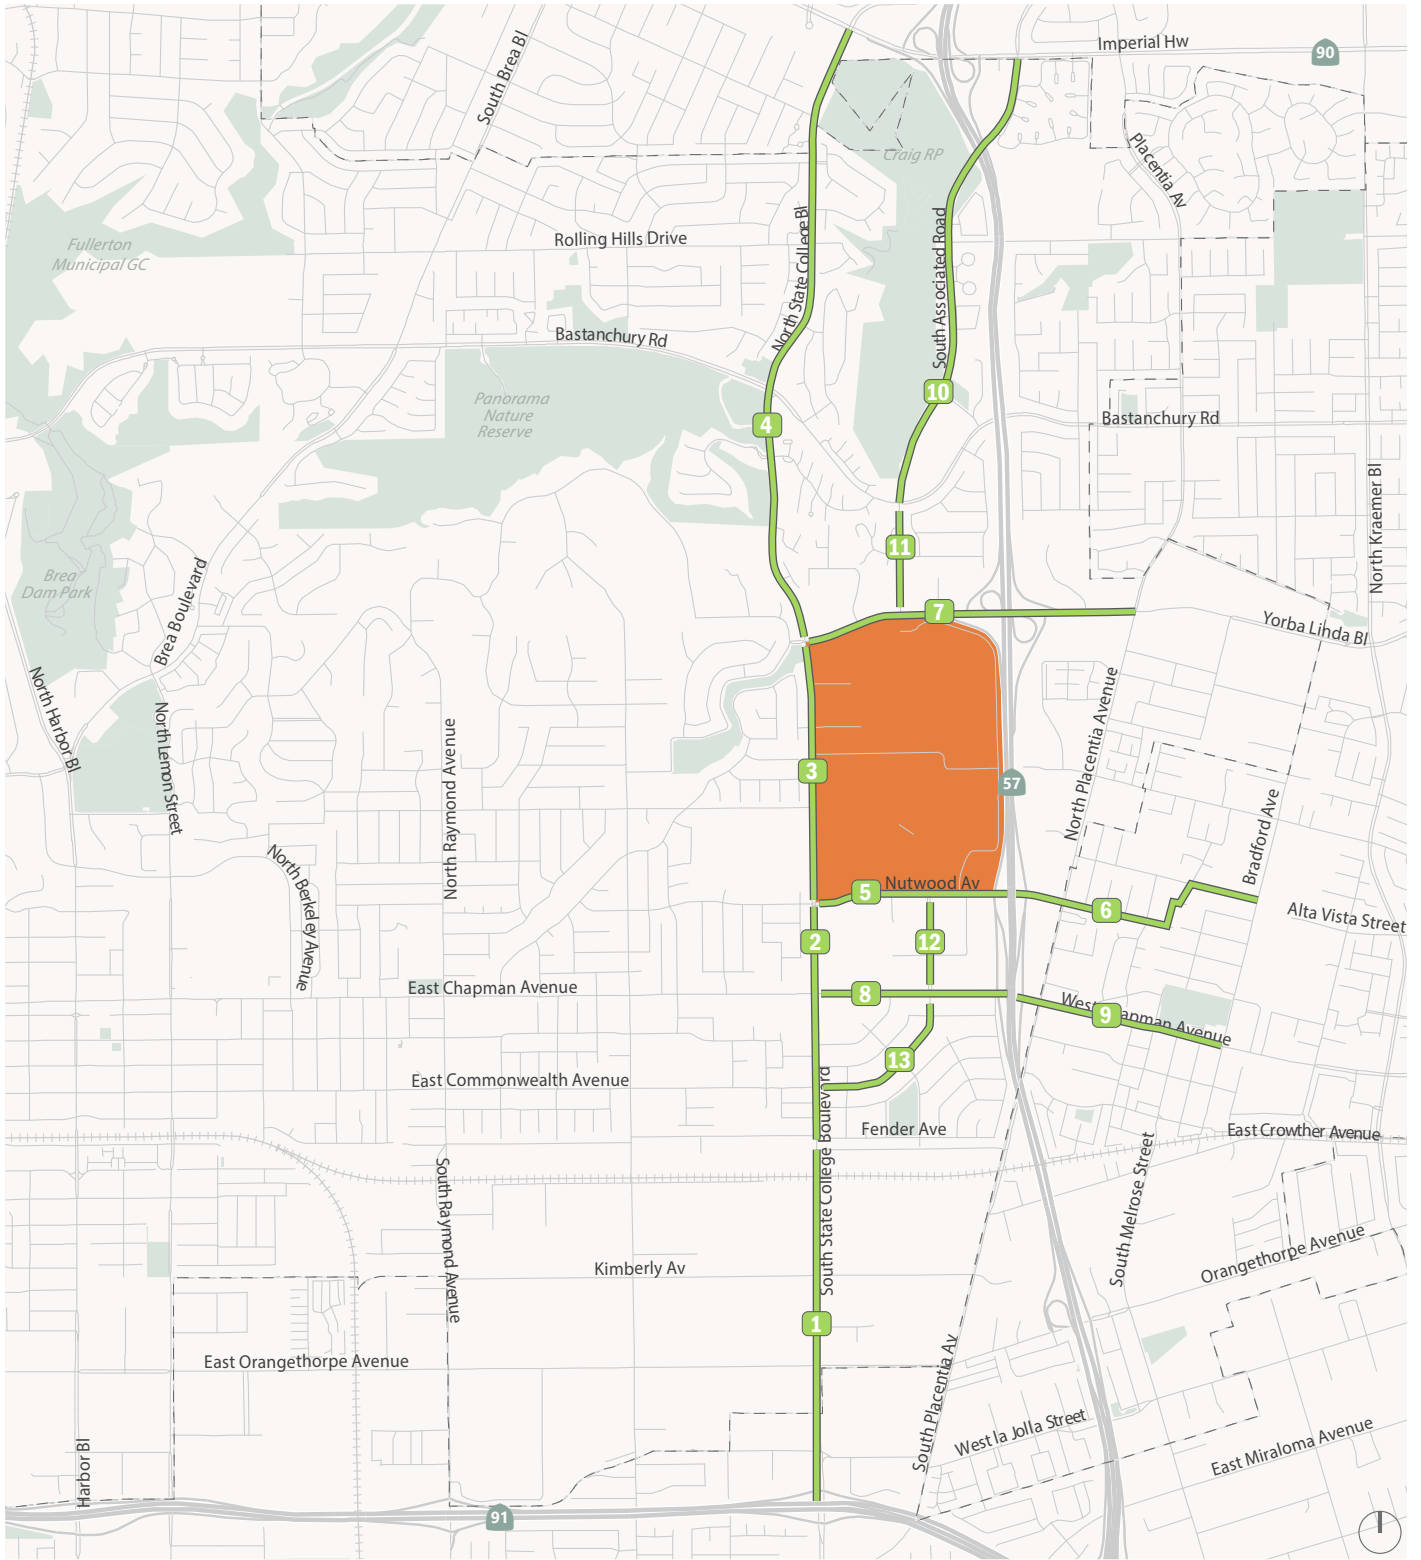

Table 1 below contains the land use inputs associated with each analysis scenario.

**Table 1: 2019 Master Plan Students, Employees, and Housing Growth Forecasts**

Scenario	Students	Employees	Students in University Housing	Students per Employee	Share of Students Living in University Housing
2019 Baseline No Project	25,000	5,594	2,829	4.46	11.3%
2019 Baseline Plus 2019 Master Plan	32,000	6,594	5,829	4.85	18.2%
2040 Cumulative No Project	25,000	5,594	2,829	4.46	11.3%
2040 Cumulative Plus 2019 Master Plan	32,000	6,594	5,829	4.85	18.2%

## Project Site Vicinity and Analysis Locations

## 2. Significance Criteria and Analysis Methodologies, and Results

### Analysis Methods

The transportation impact analysis methodology includes a combination of quantitative and qualitative evaluations of the roadway, bicycle, pedestrian, and transit components of the transportation system. All analysis presumes that future background travel conditions remain relatively constant and do not account for potential changes associated with disruptive trends such as increased use of transportation networking companies (TNCs), which include Uber and Lyft, internet shopping, other internet related activities, automated vehicles (AVs), and micro-transit services.

The Orange County Regional Travel model (OCTAM) was used to forecast roadway segment volumes and estimate existing and future Vehicle Miles Traveled (VMT). This model is consistent with the 2016 SCAG RTP/SCS; it has a base year of 2019 and a forecast year of 2040. The 2019 Master Plan does not propose any substantive changes to the campus transportation network, so no changes were made to the baseline or cumulative networks, beyond those programmed in the RTP/SCS.

### Regulatory Setting and Significance Criteria

The significance criteria used to evaluate the project impacts to transportation are based on the *California State University Transportation Impact Study Manual (March 2019)*. Specific criteria to be used for identifying potential transportation impacts are shown in Table 2.

**Table 2: Significance Criteria**

Impact Categories	CSU Significance Criteria
Plan Conflict	The project would conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities.
VMT Impacts <sup>1</sup>	The project would result in a VMT-related impact as described below
Hazard Impact	The project would substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).
Emergency Access Impact	The project would result in inadequate emergency access.

Note: 1. Refer to Table 3

Source: CSU TSM Guidelines, 2019

For plan conflicts addressing the circulation system, a review of transit, roadways, bicycle and pedestrian facilities are provided in Chapter 4. For VMT impacts, the Transportation Impact Study manual recommends detailed thresholds for project and cumulative conditions as shown in Table 3. In this case, the Project proposes the addition of 4,000 commuter students, 3,000 resident students, and 1,000 employees, so it was analyzed as a mixed-use project.

**Table 3: VMT Significance Thresholds**

Impact Categories	CSU Significance Thresholds
Project Level Impacts	<u>Residential Projects:</u> VMT / Resident exceeds threshold of 15% below existing regional, sub-regional, or citywide VMT / Resident
	<u>Office/Industrial:</u> VMT / Employee exceeds threshold of 15% below existing regional, sub-regional, or citywide VMT / Employee
	<u>Mixed-Use:</u> VMT / Service Population <sup>1</sup> exceeds threshold of 15% below existing regional, sub-regional, or citywide VMT / Service Population
	<u>Commuter Student Growth:</u> VMT / Commuter Student exceeds threshold of 15% below existing regional, sub-regional, or citywide VMT / Commuter Student
	<u>University Employment:</u> VMT / Employee exceeds threshold of 15% below existing regional, sub-regional, or citywide VMT / Employee
Cumulative Impacts	<u>Residential Projects:</u> VMT / Resident under the “with project” condition exceeds the Citywide, regional or sub-regional VMT / Resident identified under the RTP/SCS condition
	<u>Office/Industrial:</u> VMT / Employee under the “with project” condition exceeds the Citywide, regional, or sub-regional VMT / Employee identified under the RTP/SCS condition
	<u>Mixed-Use:</u> VMT / Service Population <sup>1</sup> under the “with project” condition exceeds the Citywide, regional, or sub-regional VMT / Service Population identified under the RTP/SCS condition
	<u>Commuter Student Growth:</u> VMT / Commuter Student under the “with project” condition exceeds the Citywide, regional or sub-regional VMT / Commuter Student identified under the RTP/SCS condition
	<u>University Employment:</u> VMT / Employee under the “with project” condition exceeds the Citywide, regional, or sub-regional VMT / Employee identified under the RTP/SCS condition

Note: 1. Service population is typically defined as population plus employment. For campuses, service population is defined as population plus employment plus students. The transportation consultant shall not double count resident students twice in this evaluation (i.e., shall not count students that also live on campus).

Source: CSU TSM Guidelines, 2019

# Existing Vehicle Miles Traveled (VMT) Analysis

OCTAM was used to estimate the existing VMT per Service Population for the CSU Fullerton campus and the City of Fullerton. Per the *California State University Transportation Impact Study Manual (March 2019)*, students were included in the service population. However, students who reside on-campus are included in both the Campus and City populations but are not double counted as both students and residents in the calculation of service population.

VMT was estimated using the Origin/Destination method. This was completed by multiplying the OD trip tables and the final assignment skim matrices. The OD tables provided the number of trips between each Traffic Analysis Zone (TAZ), and the skim matrices provided the distance on the roadway network, or trip length, between each TAZ. The full length of all trips with an origin or destination in the TAZ representing the CSU Fullerton campus were used to estimate the campus VMT, and likewise the full length of all trips with an origin or destination in any of the TAZs representing the City of Fullerton were used to estimate the City VMT.

**Table 4: Existing Vehicle Miles Traveled**

Study Area	VMT Per Service Population
CSU Fullerton Campus	18.72
City of Fullerton	22.24

Note: Service population include residents, employees, and students.

Source: Fehr & Peers, 2019

As shown in Table 4, the existing CSU Fullerton campus produces a lower VMT per Service Population than the City of Fullerton. This is likely due to the reduction in trip and trip lengths associated with students living on campus and available transit services used to access the campus.

### 3. Impact Analysis

This chapter evaluates potential transportation impacts under Existing Plus Project and Cumulative Plus Project conditions.

#### Vehicle Miles Traveled

The OCTAM model was modified to include the Project to evaluate the impacts of the Project. The addition of 4,000 commuter students, 3,000 resident students, and 1,000 employees were isolated to assess the Project generated VMT per Service Population. Per the *California State University Transportation Impact Study Manual (March 2019)*, students were included in the service population. However, students who reside on-campus and are included in the Campus and City populations were not counted as both students and residents.

The City of Fullerton VMT per Service Population was calculated for the existing condition using the OCTAM model to establish the citywide threshold. The existing and expanded campus both operate more efficiently with a lower VMT per Service Population than the existing citywide average. The Project generated VMT per Service Population from the campus expansion is lower than the existing campus VMT per Service Population. This is likely due to the VMT efficiency gained from having a higher proportion of students living on campus.

VMT was estimated using the Origin/Destination method. This was completed by multiplying the OD trip tables and the final assignment skim matrices. The OD tables provided the number of trips between each Traffic Analysis Zone (TAZ), and the skim matrices provided the distance on the roadway network, or trip length, between each TAZ. The full length of all trips with an origin or destination in the TAZ representing the expansion of the CSU Fullerton campus were used to estimate the project generated VMT.

**Table 5: Existing Plus Project Vehicle Miles Traveled**

	Existing VMT Per Service Population	Project Generated VMT Per Service Population
CSU Fullerton Campus	18.72	--
CSU Fullerton Campus Expansion (Project) <sup>1</sup>	--	14.38
City of Fullerton	22.24	--
15% Below City of Fullerton	18.90	--

Notes:

1. Campus growth only

Source: Fehr & Peers, 2019

As shown in Table 5, the Project generated VMT per service population does not exceed the threshold of 15% below citywide VMT per Service Population. Therefore, the Project has a less than significant impact in the Existing Plus Project conditions.

The 2040 OCTAM model was used to calculate the VMT Per Service Population for the City of Fullerton in the Cumulative condition. The Cumulative condition is consistent with the SCAG RTP/SCS.

The 2040 OCTAM model was modified to include the Project to evaluate cumulative project effect on citywide VMT under the Cumulative Plus Project condition. The addition of 4,000 commuter students, 3,000 resident students, and 1,000 employees were added to the existing campus to assess the project effect on citywide VMT per Service Population. Per the *California State University Transportation Impact Study Manual (March 2019)*, students were included in the service population. However, students who reside on-campus and are included in the City populations were not counted as both students and residents.

VMT was estimated using the boundary method. This was completed by selecting all roadway segments in the OCTAM model within the City of Fullerton boundary, and multiplying the number of trips on each roadway segment by the length of that roadway segment.

**Table 6: Cumulative Vehicle Miles Traveled**

	Cumulative VMT Per Service Population	Project Effect on VMT Per Service Population
City of Fullerton	13.19	12.86

Source: Fehr & Peers, 2019

As shown in Table 6, the Citywide VMT per Service Population under the “with project” condition does not exceed the Citywide, identified under the RTP/SCS, condition. Therefore, the Project has a less than significant cumulative impact.

A summary of the VMT impacts is provided below:

- Project Level: The project generates VMT per Service Population that does not exceed 15 percent below the base year rate for the master plan area; therefore, the project impact is considered **less-than-significant**.
- Cumulative: The project generates VMT per Service Population does not cause total VMT for the City of Fullerton to exceed the 2040 forecast from the SCAG RTP/SCS; therefore, the project impact is considered **less-than-significant**.

## **Pedestrian and Bicycle Facilities**

The potential impact to pedestrian bicycle facilities was evaluated based on whether the proposed project would physically disrupt an existing facility or interfere with the implementation of a planned facility. In addition, the proposed project was evaluated to determine if it would create potential conflicts with applicable policies, plans, or programs (as defined in the regulatory setting above) supporting bicycle use or pedestrian travel such that the conflict could reduce bicycle trips or increase conflicts between pedestrians, bicyclists or other modes.

A review of the project description did not identify any disruption to existing pedestrian or bicycle facilities.

New bicycle and pedestrian trips will be generated by campus growth commensurate with student, employee, and on-campus housing growth. Overall, the student and employee total would increase by 8,000 persons, while the number of on-campus residents would increase by 3,000 persons. Due to the highly walkable nature of the CSU Fullerton campus, every additional student, employee, and resident added to the campus population would generate a variety of on-campus pedestrian trips throughout a typical school day (e.g., walking trips to class, meals, social activities, etc.).

The proposed increase in on-campus housing would enable a greater percentage of students to walk to class or work compared to existing conditions. Moreover, increases in transit and vehicle commute trips would generate additional pedestrian trips between campus destinations and on-campus parking and transit facilities, as all transit and vehicle trips begin and end with a pedestrian trip.

## **Transit Service and Facilities**

The potential impact to transit service or facilities was evaluated based on whether the proposed project would physically disrupt an existing facility/service or interfere with the implementation of a planned facility/service. In addition, the proposed project was evaluated to determine if it would create potential conflicts with applicable policies, plans, or programs (as defined in the regulatory setting above) supporting transit such that the conflict could reduce transit trips or increase conflicts with other modes.

A review of the project description did not identify any disruption to existing transit facilities. New transit trips will be generated by campus growth commensurate with growth in students and employees. No proposed development would modify a transit stop location or affect transit headways.

Additional transit ridership demand would increase boarding and alighting activity at existing bus stops and transit terminals located on campus and at the Fullerton Metrolink Station.

## Hazards

Hazard impacts were analyzed based on the inclusion of any specific design components that would create a hazardous condition, or change land use relative to the land use context and mix of travel such that the volume, mix, or speed of traffic was not anticipated as part of the original transportation network design.

The development included in the 2019 Master Plan is infill development consistent with the existing land use context. As such, it will generate a mix of traffic that is similar today. With more students and employees, the volume of traffic across modes will increase and this may result in slower travel speeds for some modes. These changes did not cause conditions that warranted modification of the existing network as part of the 2019 Master Plan. Any new sidewalk or paths will be designed and constructed to applicable design standards to minimize hazardous conditions and will be environmentally reviewed for project scale hazards when the project advances through the project development process.

## Emergency Access

Project-level details of planned development are not included in the 2019 Master Plan. As part of project-level environmental review, input from emergency services should be solicited to ensure that emergency access is acceptable. Every CSU project is also required to follow the State University Administrative Manual (SUAM) which requires the State Fire Marshal to review all projects prior to implementation. During this review, possible emergency access impacts will be identified and resolved.

## Mitigation Measures

There are no significant impacts, therefore no mitigation measures are required.

## 4. Traffic Volumes

48-hour roadway segment counts were collected from September 24, 2019 – September 25, 2019. Roadway segment counts were collected on all study segments on a weekday while schools were in session. The traffic counts for Existing Conditions are provided in **Appendix A**.

The OCTAM model was modified to include the Project to evaluate the impacts of the Project. The traffic volume due to the addition of 4,000 commuter students, 3,000 resident students, and 1,000 employees was established by running a Select Zone Analysis in the travel demand model. This isolated the daily volume on each study roadway segment that was added due to the Project. This volume was added to the traffic counts to produce Existing Plus Project traffic volumes.

Cumulative and Cumulative Plus Project traffic volumes were forecasted in a similar manner using the 2040 OCTAM model.

For Cumulative traffic volumes, the volume forecasts from the model were adjusted to account for differences between the model's base year volume estimates and observed traffic counts. The adjustment involved isolating the incremental change in volumes between the base year model and the future year model and adding that difference to the base year traffic counts. For Cumulative Plus Project, the traffic volume due to the addition of 4,000 commuter students, 3,000 resident students, and 1,000 employees was established by running the model with the Project land use.

The daily traffic volumes at the study locations for all analysis scenarios are presented below in Table 7.

**Table 7: Daily Traffic Volumes**

Segment	Existing (2019) Count	Existing (2019) Plus Project	Cumulative (2040)	Cumulative (2040) Plus Project

**Subject: Biological Resources Assessment Memorandum for the California State University Fullerton Education and Facilities Master Plan Update Project, Fullerton, California**

Dear Mr. Zordilla,

Rincon Consultants, Inc. (Rincon) is pleased to submit this Biological Resources Assessment Memorandum (BRAM) for the California State University Fullerton (CSUF) Education and Facilities Master Plan Update Project (project) located at 800 North State College Boulevard in Fullerton, California. The purpose of the BRAM is to document the existing conditions of sensitive biological resources within the project and evaluate the potential for rare, threatened, and endangered species occur at the project site or to be affected by the proposed construction activities.

The project impacts, regulations, and mitigation measures (MMs) are discussed in accordance with the California Environmental Quality Act (CEQA) and anticipated environmental review related to the project.

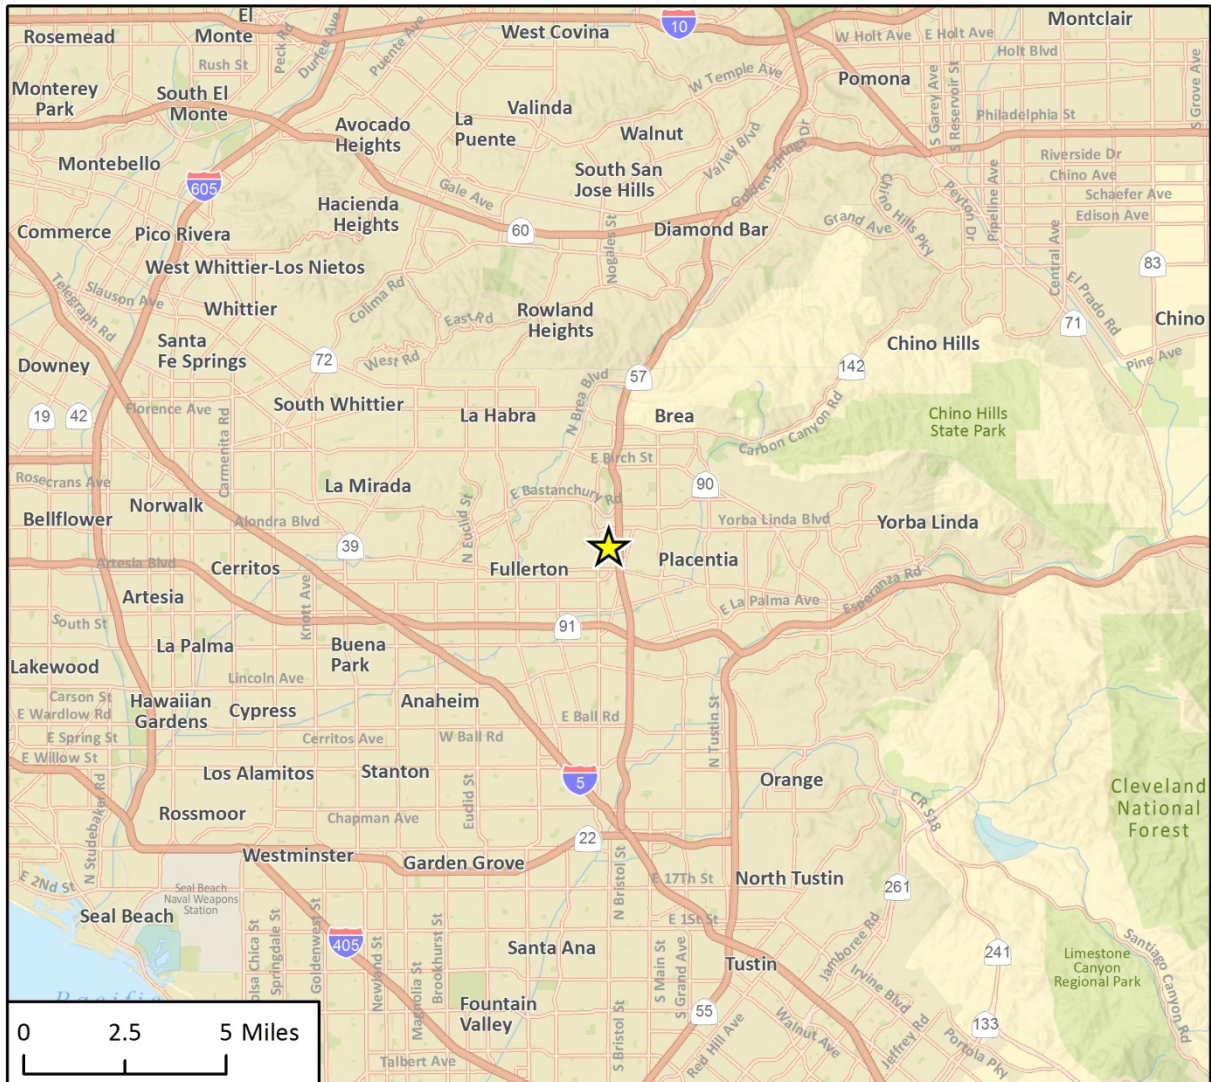

## Project Description and Location

The proposed project is the CSUF Educational and Facilities Master Plan Update, also referred to as the Campus Master Plan (CMP). The proposed project is an update of the 2003 CSUF Master Development Plan (MDP). The CMP is a guide for the future development of the CSUF campus. According to the CSUF Division of Academic Affairs, CSUF reached the MDP Ceiling of 25,000 on-campus full-time equivalent student (FTES) in the 2016-2017 academic year. The CMP will be designed to accommodate a 32,000 FTES ceiling through the year 2039. The FTES increase is based on estimates of future demand for CSUF's services. The CMP would accommodate, not cause, these projected FTES increases, which are projected to occur with or without implementation of the CMP.

The proposed project is located at 800 North State College Boulevard, Fullerton, Orange County, California (Figure 1) and encompasses the entire CSUF campus (Figure 2). The main portion of the campus occurs between Nutwood Avenue to the south, State College Boulevard to the west, Yorba Linda Boulevard to the north, and State Route (SR) 57, the Orange Freeway, to the east. An additional area of the campus lies between Nutwood Ave to the north, Langsdorf Drive to the east, College Place to

the south, and North Commonwealth Avenue to the west. The project site encompasses approximately 240 acres. The project site is depicted on the *La Habra and Anaheim, California* United States Geological Survey 7.5-minute quadrangle map (USGS 2019).

## Methodology

### Regulatory Overview

Regulated or sensitive resources studied and analyzed herein include special-status plant and wildlife species, nesting birds and raptors, sensitive plant communities, jurisdictional waters and wetlands, wildlife movement, and locally protected resources, such as protected trees. For the purpose of this report, potential impacts to biological resources were analyzed based on the following statutes:

#### Federal

- Federal Endangered Species Act (ESA)
- Federal Clean Water Act (CWA)
- Migratory Bird Treaty Act (MBTA)
- The Bald and Golden Eagle Protection Act

#### State

- California Environmental Quality Act (CEQA)
- California Endangered Species Act (CESA)
- California Fish and Game Code (CFGF)
- Porter-Cologne Water Quality Control Act

#### Local

- City of Fullerton Municipal Code Section 9.06

### Literature Review

Prior to conducting the biological field survey, Rincon Biologist Amy Leigh Trost reviewed the project plans (provided by the client), aerial photographs, and previous historical land use of the project site. Queries of the California Department of Fish and Wildlife (CDFW) California Natural Diversity Database (CNDDDB; CDFW 2019) and the California Native Plant Society (CNPS) Online Inventory of Rare and Endangered Plants (CNPS 2019) were conducted to obtain comprehensive information regarding state and federally listed species as well as other special-status species considered to have potential to occur within a 5-mile radius of the project site. For CNPS query purposes, a 4-quadrangle search area centered on the project site was used.

In addition, regionally occurring sensitive biological resources and geological information related to the site were researched from the following sources:

- U.S. Fish and Wildlife (USFWS) Critical Habitat Portal (USFWS 2019a)
- USFWS Information, Planning, and Conservation System (USFWS 2019b)
- USFWS National Wetland Inventory (NWI) Mapper (USFWS 2019c)
- Natural Resources Conservation Service (NRCS) Web Soil Survey (NRCS 2019)

## Field Survey

A field reconnaissance survey was conducted by Rincon Biologist Amy Leigh Trost on July 15, 2019, to document the existing site conditions and to evaluate the potential for presence of sensitive biological resources including sensitive plant and animal species, sensitive plant communities, potentially jurisdictional waters of the U.S. and wetlands, and habitat for federally and state protected species. Weather conditions during the survey included temperatures of 85 to 93 degrees Fahrenheit, with calm winds up to three miles per hour, and clear skies with good visibility. The survey was conducted on foot and by remote observation with 10x42 binoculars. All biological resources encountered within the project site were recorded.

The habitat requirements for each regionally occurring special-status species were assessed and compared to the type and quality of the habitats observed within the project site during the site visit. The survey was conducted to make an initial determination regarding the presence or absence of terrestrial biological resources including plants, birds and wildlife.

Based on the results of the site visit, literature review, and species known to occur regionally, Rincon assessed the potential for the proposed project to impact special-status species within the project site. The potential presence of special-status species is based on the site visit and literature review, and is intended to assess habitat suitability within the project area only. Definitive surveys to confirm the presence or absence of special-status species were not performed and are not included within this analysis. The findings and opinions conveyed in this report are based exclusively on the methodology described above.

## Existing Conditions

### Soils

The project site is located in a predominantly flat area with elevations ranging from 222 to 272 feet above mean sea level. The project site contains only one soil type: Mocho Loam, 0 to 2 percent slopes (NRCS 2019). This soil type is common in areas with irrigated crops and citrus as well as urban development.

All on-site soils appear to have been subject to varying degrees of topsoil removal through grading and excavation. The Fullerton Arboretum, located in the northeastern corner of the project site, has various soils which have been brought in to maintain the artificial habitats on site.

### Vegetation

Two vegetation communities/land use types occur within the project site: Landscaped and Developed.

#### Landscaped

The Fullerton Arboretum occurs in the northeast corner of the project site. The arboretum covers approximately 26 acres of the CSUF campus. It is divided into a desert collection, Mediterranean collection, and woodland collection. The southwest portion of the arboretum is comprised of a fruit tree orchard, vegetable garden, and compost piles. Species within the arboretum include both native and non-native plant species. In addition, areas of landscaping with ornamental vegetation and trees are scattered throughout the remaining project site. A sports complex with maintained fields is present in the north central portion of the project site.

## Developed

Developed land includes areas that have been constructed upon or otherwise physically altered to an extent that native vegetation is no longer supported. It is characterized by permanent or semi-permanent structures, pavement or hardscape, and landscaped areas that often require irrigation (Oberbauer et al. 2008). For the purpose of this report, the landscaped land cover type has been separated into its own category.

The majority of the project site includes buildings, asphalt roadways and parking lots, and power and telephone poles.

## Wildlife

The project site provides habitat for wildlife species, mainly nesting birds, primarily within the landscaped portion of the project site. Avian species observed on site during the field reconnaissance survey are included in Table 1. Other wildlife species observed on site include California ground squirrel (*Otospermophilus beecheyi*), eastern fox squirrel (*Sciurus niger*), desert cottontail (*Sylvilagus audubonii*), and western fence-lizard (*Sceloporus occidentalis*).

**Table 1 Avian Species Observed During July 15, 2019 Reconnaissance Survey**

Scientific Name	Common Name
<i>Anas platyrhynchos</i>	mallard
<i>Ardea alba</i>	great egret
<i>Calypte anna</i>	Anna’s hummingbird
<i>Corvus brachyrhynchos</i>	American crow
<i>Corvus corax</i>	common raven
<i>Haemorhous mexicanus</i>	house finch
<i>Passer domesticus</i>	house sparrow
<i>Psaltiriparus minimus</i>	bushtit
<i>Sayornis nigricans</i>	black phoebe
<i>Streptopelia decaocto</i>	Eurasian collared-dove
<i>Zenaida macroura</i>	mourning dove

## Nesting Birds and Roosting Bats

Established ornamental trees and shrubs, buildings, and power and telephone poles on the project site could provide suitable nesting habitat for common nesting birds protected under the CFGC Section 3503 and the MBTA.

## Sensitive Biological Resources and Impact Analysis

### Special-Status Species

Special-status species are those plants and animals listed, proposed for listing, or candidates for listing as Threatened or Endangered by the USFWS under the Federal ESA; those considered “Species of Concern” by the USFWS; those listed or candidates for listing as Rare, Threatened, or Endangered by the CDFW under the CESA; animals designated as “Fully Protected” by the CFGC; animals listed as “Species

of Special Concern” (SSC) by the CDFW; CDFW Special Plants, specifically those with California Rare Plant Ranks (CRPR) of 1A, 1B, and 2 in the CNPS’s Inventory of Rare and Endangered Vascular Plants of California (2019).

Local, state, and federal agencies regulate special-status species and may require an assessment of their presence or potential presence to be conducted on site prior to the approval of proposed development on a property. This section discusses sensitive biological resources observed on the project site and evaluates the potential for the project site to support other sensitive biological resources. A list of special-status plant and animal species with potential to occur onsite was developed based on a review of a 5-mile search of the CNDDDB (CDFW 2019) and a 4-quad search of the CNPS’s online Inventory of Rare and Endangered Vascular Plants of California (CNPS 2019) and can be found in Attachment A.

Pursuant to Appendix G of the CEQA Guidelines, the proposed project would have a significant effect on biological resources if it would:

- a) *Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS.*

The CNDDDB/CNPS query results include 9 special-status plant species within five miles of the project site. Special-status plant species typically have specialized habitat requirements, including plant community types, soils, elevational ranges. Special-status plant species typically have specialized habitat requirements, including plant community types, soils, elevational ranges. No natural native habitat exists within the project site for any of these plant species. All 9 species are classified as having no potential to occur on site (Attachment A). No special-status plant species were observed during the site reconnaissance survey.

The CNDDDB query results include 18 special-status wildlife species within five miles of the project site. The potential for special-status wildlife species to occur on the site was assessed based on known distribution, habitat requirements, and existing site conditions. No special-status wildlife species were determined to have potential to occur on site (Attachment A) and, similarly, none were detected within or immediately surrounding the project site during the site reconnaissance survey. The lack of potential for special-status wildlife species occurrence is based on low habitat quality in developed areas of the project, lack of native vegetation, isolation from other suitable habitat due to developed land uses surrounding the site, and high levels of human disturbance.

The project would not have any substantial adverse effect on any candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or USFWS.

## Sensitive Plant Communities

Pursuant to Appendix G of the CEQA Guidelines, the proposed project would have a significant effect on biological resources if it would:

- b) *Have a substantial adverse impact on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the CDFW or USFWS.*

Three sensitive vegetation communities were documented within 5 miles of the project site: California walnut woodland, Southern California Arroyo Chub/Santa Ana Sucker Stream, and Southern Willow Scrub. The only habitat present on the project site is landscaped and developed. Therefore, the project would not have any substantial adverse effect on any native riparian habitat or sensitive vegetation communities.

## Jurisdictional Wetlands and Waterways

Pursuant to Appendix G of the CEQA Guidelines, the proposed project would have a significant effect on biological resources if it would:

- c) *Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means.*

Two ponds are located within the Fullerton Arboretum. The biologist confirmed with the arboretum director that the ponds are artificial, contain circulated water and do not connect to any other water features. The nearest natural feature is Fullerton Creek, which is located approximately 80 feet from the northwest corner of the project site under the intersection of East Yorba Linda Boulevard and North State College Boulevard. Proposed direct impacts would be approximately 625 feet from the southern pond. Given the distance from construction no direct or indirect impacts would occur.

## Wildlife Movement

Pursuant to Appendix G of the CEQA Guidelines, the proposed project would have a significant effect on biological resources if it would:

- d) *Interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors or impede the use of wildlife nursery sites.*

Wildlife corridors are generally defined as connections between habitat patches that allow for physical and genetic exchange between otherwise isolated animal populations. Such linkages may serve a local purpose, such as between foraging and denning areas, or they may be regional in nature, allowing movement across the landscape. Some habitat linkages may serve as migration corridors, wherein animals periodically move away from an area and then subsequently return. Examples of barriers or impediments to movement include housing and other urban development, roads, fencing, unsuitable habitat, or open areas with little vegetative cover. Regional and local wildlife movements are expected to be concentrated near topographic features that allow convenient passage, including roads, drainages, and ridgelines.

The project site is encompassed by developed industrial and residential properties and established transportation corridors. The project site is located adjacent to the Fullerton Creek; however, this area is not designated as an Essential Connectivity Area or Natural Landscape block as identified in available studies, such as the *California Essential Habitat Connectivity Project: A Strategy for Conserving a Connected California* (Spencer *et al.* 2010). The project site has limited value or benefit to wildlife movement in the area given that it is bounded by urban and residential developments. The San Gabriel Mountains located approximately 18 miles north of the project site serve as the closest essential connectivity area. A natural landscape block is located approximately 3 miles northeast of the project site in Chino Hills. Given the distance to these areas, the site does not serve as a migratory wildlife corridor and the proposed project would not interfere substantially with the movement of any native wildlife species.

## Local Policies and Ordinances

Pursuant to Appendix G of the CEQA Guidelines, the proposed project would have a significant effect on biological resources if it would:

- e) *Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.*

The City of Fullerton Municipal Code Section 09.06 states that the City has jurisdiction over planning, planting, maintenance and removal of all trees and other landscape material within the City's right-of-way (ROW; Fullerton 1995). Furthermore, tree trimming and removal of any City-owned street tree must be conducted by the City's contractor, West Coast Arborists, following a request to the Public Works department (Fullerton 2019). If trees within the City's ROW are proposed to be altered in any way as part of this project, a service request shall be submitted to the City of Fullerton Landscape Division. Therefore, the proposed project would not conflict with any local policies or ordinances.

## Adopted or Approved Plans

Pursuant to Appendix G of the CEQA Guidelines, the proposed project would have a significant effect on biological resources if it would:

- f) *Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state habitat conservation plan.*

The project site is within the City of Fullerton and, therefore, falls under The Fullerton Plan Master Element D: The Fullerton Natural Environment (Fullerton 2012). The plan provides guidelines for water, air quality and climate change, integrated waste management, open space and natural resources, and natural hazards. The proposed project would not have any impacts to biological resources including native habitats or waterways. The project site is not subject to any Habitat Conservation Plan, Natural Conservation Community Plan, or additional local, regional, or state habitat conservation plan. Therefore, the proposed project would not conflict with any adopted or approved plans.

## Recommended Actions

### Pre-construction Nesting Bird Surveys

Migratory or other common nesting birds, while not designated as special-status species, are protected by the CFGC and MBTA, and may nest within ornamental trees, structures, and within the arboretum vegetation. Therefore, construction activities within the arboretum have the potential to directly (i.e., destroy a nest) or indirectly (i.e., construction noise, dust, and other human disturbances that may cause a nest to fail) impact nesting birds protected under the CFGC and MBTA. The following measure is recommended to maintain compliance with the CFGC Section 3503 and the MBTA with respect to nesting birds:

- If initial construction and/or vegetation clearing activities occur during the bird nesting season (generally February 1 through August 31, but variable based on seasonal and annual climatic conditions), a nesting bird survey should be performed by a qualified biologist, no more than seven days prior to start of such activities to determine the presence/absence, location, and status of any active nests on site or within 100 feet of any active construction sites. The findings of the survey should be summarized in a report to be submitted to CSUF prior to undertaking construction activities at the site.
- If nesting birds are found on site, an appropriate construction buffer (e.g., 300 feet for nesting raptors or 50-100 feet for common species) as determined by a qualified biologist should be implemented around the active nests and demarcated with fencing or flagging. Nests should be monitored at a minimum of once per week by the qualified biologist until it has been determined

that the nest is no longer being used by either the young or adults. No ground disturbance should occur within this buffer until the qualified biologist confirms that the breeding/nesting is completed and all the young have fledged. If project activities must occur within the buffer, they should only be conducted at the discretion, and under the supervision, of the qualified biologist.

- If no nesting birds are observed during pre-construction surveys, no further actions would be necessary.

## Limitations

This document was prepared for use solely and exclusively by CSUF, who may use it to provide information to satisfy CEQA requirements. No other use or disclosure is intended or authorized by Rincon, nor shall this report be relied upon or transferred to any other party without the express written consent of Rincon. This work has been performed in accordance with good commercial, customary, and generally accepted biological investigation practices conducted at this time and in this geographic area. The findings and opinions conveyed in this report are based on a habitat suitability analysis level only, and did not include definitive surveys for the presence or absence of the special-status species that may be present. Definitive surveys for special-status wildlife and plant species generally require specific survey protocols with extensive field survey time to be conducted only at certain times of the year. It is understood that Rincon is to be held harmless for any inverse condemnation or devaluation of said property that may result if Rincon's report or information generated during our performance of services is used for other purposes.

Thank you for the opportunity to support your environmental analysis needs for this project. Please contact us if you have any questions.

Sincerely,

**Rincon Consultants, Inc.**

CNDDDB/CNPS Query Results and Occurrence Potentials

Scientific Name Common Name	Status Fed/State ESA CRPR or CDFW	Habitat Requirements	Potential to Occur in Project Area	Habitat Suitability/ Observations
<b>Plants and Lichens</b>				
<i>Abronia villosa</i> var. <i>aurita</i> chaparral sand-verbena	None/None 1B.1	Chaparral, coastal scrub, desert dunes. Sandy areas. -60-1570 m. annual herb. Blooms (Jan)Mar-Sep	None	No native habitats occur on the project site.
<i>Atriplex parishii</i> <i>Parish's brittle-scale</i>	None/None 1B.1	Vernal pools, chenopod scrub, playas. Usually on drying alkali flats with fine soils. 5-1420 m. annual herb. Blooms Jun-Oct	None	No native habitats occur on the project site.
<i>Atriplex serenana</i> var. <i> davidsonii</i> Davidson's saltscale	None/None 1B.2	Coastal bluff scrub, coastal scrub. Alkaline soil. 0-460 m. annual herb. Blooms Apr-Oct	None	No native habitats occur on the project site.
<i>Calochortus weedii</i> var. <i>intermedius</i> intermediate mariposa-lily	None/None 1B.2	Coastal scrub, chaparral, valley and foothill grassland. Dry, rocky open slopes and rock outcrops. 60-1575 m. perennial bulbiferous herb. Blooms May-Jul	None	No native habitats occur on the project site.
<i>Centromadia parryi</i> ssp. <i>australis</i> southern tarplant	None/None 1B.1	Marshes and swamps (margins), valley and foothill grassland, vernal pools. Often in disturbed sites near the coast at marsh edges; also in alkaline soils sometimes with saltgrass. Sometimes on vernal pool margins. 0-975 m. annual herb. Blooms May-Nov	None	No native habitats occur on the project site.
<i>Chorizanthe parryi</i> var. <i>fernandina</i> San Fernando Valley spineflower	Proposed FT/SE 1B.1	Coastal scrub, valley and foothill grassland. Sandy soils. 15-1015 m. annual herb. Blooms Apr-Jul	None	No native habitats occur on the project site.
<i>Dudleya multicaulis</i> many-stemmed dudleya	None/None 1B.2	Chaparral, coastal scrub, valley and foothill grassland. In heavy, often clayey soils or grassy slopes. 15-790 m. perennial herb. Blooms Apr-Jul	None	No native habitats occur on the project site.
<i>Lasthenia glabrata</i> ssp. <i>coulteri</i> Coulter's goldfields	None/None 1B.1	Coastal salt marshes, playas, vernal pools. Usually found on alkaline soils in playas, sinks, and grasslands. 1-1375 m. annual herb. Blooms Feb-Jun	None	No native habitats occur on the project site.
<i>Symphotrichum defoliatum</i> San Bernardino aster	None/None 1B.2	Meadows and seeps, cismontane woodland, coastal scrub, lower montane coniferous forest, marshes and swamps, valley and foothill grassland. Vernal mesic grassland or near ditches, streams and springs; disturbed areas. 2-2040 m. perennial rhizomatous herb. Blooms Jul-Nov	None	No native habitats occur on the project site.
<b>Invertebrates</b>				
<i>Euphydryas editha quino</i> Quino checkerspot butterfly	FE/None	Sunny openings within chaparral & coastal sage shrublands in parts of Riverside & San Diego counties. Hills and mesas near the coast. Need high densities of food plants <i>Plantago erecta</i> , <i>P. insularis</i> , and <i>Castilleja exserta</i>	None	No suitable chaparral or coastal sage shrub habitats occur on the project site.

Scientific Name Common Name	Status Fed/State ESA CRPR or CDFW	Habitat Requirements	Potential to Occur in Project Area	Habitat Suitability/ Observations
<b>Fish</b>				
<i>Catostomus santaanae</i> Santa Ana sucker	FT/None	Endemic to Los Angeles Basin south coastal streams. Habitat generalists, but prefer sand-rubble-boulder bottoms, cool, clear water, and algae.	None	No suitable streams occur on the project site.
<i>Oncorhynchus mykiss irideus</i> pop. 10 steelhead - southern California DPS	FT/None	Federal listing refers to populations from Santa Maria River south to southern extent of range (San Mateo Creek in San Diego County). Southern steelhead likely have greater physiological tolerances to warmer water and more variable conditions.	None	No suitable streams occur on the project site.
<b>Reptiles</b>				
<i>Anniella stebbinsi</i> southern California legless lizard	None/None SSC	Generally south of the Transverse Range, extending to northwestern Baja California. Occurs in sandy or loose loamy soils under sparse vegetation. Disjunct populations in the Tehachapi and Piute Mountains in Kern County. Variety of habitats; generally in moist, loose soil. They prefer soils with a high moisture content.	None	No suitable habitats with sandy or loose, loamy soils occur on the project site.
<i>Emys marmorata</i> western pond turtle	None/None SSC	A thoroughly aquatic turtle of ponds, marshes, rivers, streams and irrigation ditches, usually with aquatic vegetation, below 6000 ft elevation. Needs basking sites and suitable (sandy banks or grassy open fields) upland habitat up to 0.5 km from water for egg-laying.	None	Ponds on site are artificial and do not connect to native habitat.
<i>Phrynosoma blainvillii</i> coast horned lizard	None/None SSC	Frequents a wide variety of habitats, most common in lowlands along sandy washes with scattered low bushes. Open areas for sunning, bushes for cover, patches of loose soil for burial, and abundant supply of ants and other insects.	None	No loose sandy soils occur on site. No native habitat occurs on the project site.
<b>Birds</b>				
<i>Buteo swainsoni</i> Swainson's hawk	None/ST	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, & agricultural or ranch lands with groves or lines of trees. Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	None	Potentially suitable tall trees for nesting occur on the project site but no suitable foraging areas occur in the area. The project site is regularly disturbed by students, visitors, and landscaping staff.

Scientific Name Common Name	Status Fed/State ESA CRPR or CDFW	Habitat Requirements	Potential to Occur in Project Area	Habitat Suitability/ Observations
<i>Campylorhynchus brunneicapillus sandiegensis</i> coastal cactus wren	None/None SSC	Southern California coastal sage scrub. Wrens require tall opuntia cactus for nesting and roosting.	Low	Potentially suitable cactus species occur within the Fullerton Arboretum; however, the project site is regularly disturbed by students, visitors, and landscaping staff.
<i>Coccyzus americanus occidentalis</i> western yellow-billed cuckoo	FT/SE	Riparian forest nester, along the broad, lower flood-bottoms of larger river systems. Nests in riparian jungles of willow, often mixed with cottonwoods, with lower story of blackberry, nettles, or wild grape.	None	No suitable riparian forests with willows occur on the project site.
<i>Falco peregrinus anatum</i> American peregrine falcon	D/D SFP	Near wetlands, lakes, rivers, or other water; on cliffs, banks, dunes, mounds; also, human-made structures. Nest consists of a scrape or a depression or ledge in an open site.	Low	Suitable human-made structures for nesting and the ponds provide foraging habitat; however, the project site is regularly disturbed by students, visitors, and landscaping staff.
<i>Icteria virens</i> yellow-breasted chat	None/None SSC	Summer resident; inhabits riparian thickets of willow and other brushy tangles near watercourses. Nests in low, dense riparian, consisting of willow, blackberry, wild grape; forages and nests within 10 ft of ground.	Low	Potentially suitable riparian habitat occur on site; however, the project site is regularly disturbed by students, visitors, and landscaping staff.
<i>Laterallus jamaicensis coturniculus</i> California black rail	None/ST SFP	Inhabits freshwater marshes, wet meadows and shallow margins of saltwater marshes bordering larger bays. Needs water depths of about 1 inch that do not fluctuate during the year and dense vegetation for nesting habitat.	None	No suitable marshes or wet meadows occur on the project site.
<i>Polioptila californica californica</i> coastal California gnatcatcher	FT/None SSC	Obligate, permanent resident of coastal sage scrub below 2500 ft in Southern California. Low, coastal sage scrub in arid washes, on mesas and slopes. Not all areas classified as coastal sage scrub are occupied.	None	No suitable coastal sage scrub occurs on the project site.
<i>Setophaga petechia</i> yellow warbler	None/None SSC	Riparian plant associations in close proximity to water. Also nests in montane shrubbery in open conifer forests in Cascades and Sierra Nevada. Frequently found nesting and foraging in willow shrubs and thickets, and in other riparian plants including cottonwoods, sycamores, ash, and alders.	Low	Potentially suitable riparian habitat occur on site; however, the project site is regularly disturbed by students, visitors, and landscaping staff.

Scientific Name Common Name	Status Fed/State ESA CRPR or CDFW	Habitat Requirements	Potential to Occur in Project Area	Habitat Suitability/ Observations
<i>Sternula antillarum browni</i> California least tern	FE/SE SFP	Nests along the coast from San Francisco Bay south to northern Baja California. Colonial breeder on bare or sparsely vegetated, flat substrates: sand beaches, alkali flats, land fills, or paved areas.	None	No suitable beaches, alkali flats, or other suitable habitat occurs on the project site.
<i>Vireo bellii pusillus</i> least Bell's vireo	FE/SE	Summer resident of Southern California in low riparian in vicinity of water or in dry river bottoms; below 2000 ft. Nests placed along margins of bushes or on twigs projecting into pathways, usually willow, Baccharis, mesquite.	Low	Potentially suitable riparian habitat occur on site; however, the project site is regularly disturbed by students, visitors, and landscaping staff.
<b>Mammals</b>				
<i>Eumops perotis californicus</i> western mastiff bat	None/None SSC	Many open, semi-arid to arid habitats, including conifer & deciduous woodlands, coastal scrub, grasslands, chaparral, etc. Roosts in crevices in cliff faces, high buildings, trees and tunnels.	Low	High buildings and trees for roosting occur on the project site; however, project site is regularly disturbed by students, visitors, and landscaping staff.
<i>Nyctinomops femorosaccus</i> pocketed free-tailed bat	None/None SSC	Variety of arid areas in Southern California; pine-juniper woodlands, desert scrub, palm oasis, desert wash, desert riparian, etc. Rocky areas with high cliffs.	None	No suitable rocky areas with high cliffs occur on the project site.
<b>Sensitive Natural Communities</b>				
<i>California Walnut Woodland</i> California Walnut Woodland	None/None		None	No California walnut woodland occurs on the project site.
<i>Southern California Arroyo Chub/Santa Ana Sucker Stream</i> Southern California Arroyo Chub/Santa Ana Sucker Stream	None/None		None	No Southern California arroyo chub/Santa Ana sucker stream occurs on the project site.
<i>Southern Willow Scrub</i> Southern Willow Scrub	None/None		None	No southern willow scrub occurs on the project site.

Regional Vicinity refers to within a 5-mile search radius of site.

FE = Federally Endangered    FT = Federally Threatened    FC = Federal Candidate Species  
 SE = State Endangered    ST = State Threatened    SC = State Candidate    SR = State Rare  
 SS=State Sensitive    SSC = CDFW Species of Special Concern    SFP = State Fully Protected  
 D=Delisted

**CRPR (CNPS California Rare Plant Rank)**

- 1A=Presumed Extinct in California
- 1B=Rare, Threatened, or Endangered in California and elsewhere
- 2A=Plants presumed extirpated in California, but more common elsewhere
- 2B=Plants Rare, Threatened, or Endangered in California, but more common elsewhere

**CRPR Threat Code Extension**

- .1=Seriously endangered in California (over 80% of occurrences threatened / high degree and immediacy of threat)
- .2=Fairly endangered in California (20-80% occurrences threatened)
- .3=Not very endangered in California (<20% of occurrences threatened)

**Subject: Hazardous Materials Technical Study  
California State University, Fullerton  
800 North State College Boulevard  
Fullerton, California**

Dear Mr. Singh:

This report presents the findings of a Hazardous Materials Technical Study completed by Rincon Consultants, Inc. for California State University, Fullerton, located at 800 North State College Boulevard in Fullerton, California (subject property). The Phase I ESA was performed in accordance with our proposal dated September 17, 2018 and California Environmental Quality Act (CEQA) Services Master Enabling Agreement dated May 14, 2019.

The accompanying report presents our findings and provides an opinion regarding the presence of recognized environmental conditions. Our work program for this project, as referenced in our contract, is intended to meet a portion of the guidelines outlined in the American Society for Testing and Materials (ASTM), Standard Practice for Environmental Site Assessments: *Phase I Environmental Site Assessment Process* (ASTM Standard E-1527-13). User and Owner Questionnaires were excluded from the standard Phase I ESA scope of work; however, University representatives were interviewed during the site reconnaissance. Our scope of services, pursuant to ASTM practice, did not include any inquiries with respect to asbestos, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, vapor intrusion or other indoor air quality, mold, or high-voltage power lines.

Thank you for selecting Rincon for this project. If you have any questions, or if we can be of any future assistance, please contact us.

Sincerely,  
**Rincon Consultants, Inc.**

# Executive Summary

---

This report presents the findings of a Hazardous Materials Technical Study for California State University, Fullerton (CSUF) located at 800 N State College Boulevard, Fullerton, California (Figure 1, Vicinity Map) (subject property). The Hazardous Materials Technical Study was performed by Rincon Consultants, Inc. (Rincon). CSUF has requested this assessment and will use the information for the purposes of preparing a Master Plan Update for the subject property.

The subject property is located in an area that is primarily composed of residential, commercial, educational and vacant land uses. Rincon performed a reconnaissance of the subject property on July 2, 2019. The purpose of the reconnaissance was to observe existing conditions and to obtain information indicating the presence of recognized environmental conditions in connection with the subject property. Small quantities of hazardous materials and petroleum products were observed in the facilities and maintenance auto shop, receiving buildings, student recreation center, bulk chemical/hazardous waste area, bulk chemical storage located outside of the chilling room, Dan Black Hall Research Building, Central Plant, student housing water treatment room, and Kinesiology and Health Science Pool Room. Specific hazardous materials are described in the Site Reconnaissance Section of this report.

A regulatory database search was conducted for sites that generate, store, treat or dispose of hazardous materials or sites for which a release or incident has occurred. The search was conducted for the subject property and included data from surrounding sites within a specified radius of the property. The subject property was listed in numerous databases searched by EDR, including multiple release databases. Most of the releases of concern were associated with the closure of onsite underground storage tanks (USTs) located in at least seven areas of the subject property. Although all of the releases have been closed, closure documentation was not available for each release site.

Five adjacent properties were listed in databases searched by EDR; two of those properties were listed as release sites. Based on the information available for the adjacent properties, none of the adjacent releases are expected to impact the subject property.

Historical sources reviewed as part of the Phase I ESA include aerial photographs, topographic maps, and city directories. The historical sources reviewed indicate that the subject property and adjacent properties were used for agricultural purposes (orchards) since at least 1938 through as recently as 1977.

Based on the findings of this assessment, it is our opinion that there are seven environmental conditions in connection with the subject property as follows.

1. Three onsite releases from USTs at known locations
2. Four onsite releases from USTs at unknown locations
3. Release from onsite elevator equipment and transformers
4. Historical use of the subject property for agricultural purposes for over 40 years
5. Abandoned in-place crude oil pipeline on the subject property
6. Onsite generators (24)
7. Aerially-deposited lead in soil

Based on the former releases from onsite USTs, a soil management plan for known and unknown release locations should be prepared prior to redevelopment of the subject property. If discolored or odorous soil is encountered during redevelopment of the subject property, Rincon recommends conducting soil sampling in the area of impacted soil.

To evaluate the subject property impact associated with the former release from an onsite elevator and transformer, a soil management plan should be prepared prior to redevelopment of the subject property. If discolored or odorous soil is encountered during redevelopment of the subject property, Rincon recommends conducting soil sampling the area of impacted soil.

Prior to redevelopment of former agricultural areas, CSUF should collect shallow soil samples from the work area and analyze these samples for pesticides and arsenic. If hazardous materials are detected at elevated concentrations, a soil management plan should be prepared to handle the impacted materials properly.

During redevelopment activities in the vicinity of the abandoned pipeline, if stained/odorous soil is encountered, additional assessment may be warranted. A soil management plan should also be prepared prior to redevelopment of the subject property.

One release from an onsite generator was reported in 1994. Because no documentation pertaining to the cleanup of the release was provided, a soil management plan should be prepared for this release and other potential past releases from all onsite generators prior to redevelopment; if stained/odorous soil is encountered, additional assessment may be warranted.

State Route 57 is located adjacent to the east of the subject property. In this area, if redevelopment is planned within 50 feet of the highway, soil sampling should be conducted.

Although not considered a Recognized Environmental Condition, based on the age of the onsite structure(s) (the earliest in at least 1963) asbestos-containing materials and lead-based paint may be present on the subject property. Therefore, prior to renovation or demolition activities at the subject property, Rincon recommends conducting an asbestos-containing building materials and lead-based paint surveys.

# Introduction

---

The following sections present our findings and provide our opinion as to the presence of recognized environmental conditions (RECs) on the subject property and recommendations prior to and during future redevelopment of the property.

## Purpose

CSUF has requested this assessment and will use the information for the purposes of updating the CSUF Master Plan. The purpose of this Study was to determine if there are RECs on the subject property, taking into account commonly and reasonably ascertainable information and to qualify for Landowner Liability Protections under the Brownfields Amendments to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

A recognized environmental condition (REC) is defined pursuant to ASTM E 1527-13 as,

“the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: 1) due to any release to the environment; 2) under conditions indicative of a release to the environment; 3) under conditions that pose a material threat of a future release to the environment”.

A Controlled REC is defined pursuant to ASTM E 1527-13 as,

“a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). A condition considered by the environmental professional to be a controlled recognized environmental condition shall be listed in the findings section of the Hazardous Materials Technical Study report, and as a recognized environmental condition in the conclusions section of the Hazardous Materials Technical Study report”.

A Historical REC is defined pursuant to ASTM E 1527-13 as,

“a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by regulatory authority, without subjecting the property to any required controls (for example, use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a historical recognized environmental condition, the environmental professional must determine whether the past release is a recognized environmental condition at the time the Hazardous Materials Technical Study is conducted (for example, if there has been a change in the regulatory criteria). If the EP [Environmental Professional] considers the past release to be a recognized environmental condition at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a recognized environmental condition”.

A *de minimis* condition is defined pursuant to ASTM E 1527-13 as,

“a condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* conditions are not recognized environmental conditions nor controlled recognized environmental conditions”.

## Scope of Services

The scope of services conducted during this study is outlined below:

- Performed a reconnaissance of the subject property to identify obvious indicators of the existence of hazardous materials.
- Observed adjacent or nearby properties from public thoroughfares in an attempt to see if such properties are likely to use, store, generate, or dispose of hazardous materials.
- Obtained and reviewed an environmental records database search to obtain information about the potential for hazardous materials to exist at the subject property or at properties located in the vicinity of the subject property.
- Reviewed online files for the subject property and immediately adjacent properties as identified in the database report, as applicable.
- Reviewed the current United States Geological Survey (USGS) topographic map to obtain information about the subject property and regional topography and uses of the subject property and surrounding sites.
- Reviewed additional pertinent record sources (e.g., California Division of Oil, Gas, and Geothermal Resources records, online databases of hazardous substance release sites), as necessary, to identify the presence of RECs at the subject property.
- Reviewed reasonably ascertainable historical resources (e.g., aerial photographs, topographic maps, city directories) to assess the historical land use of the subject property and adjacent properties.
- Provided a user interview questionnaire to a representative of the client, the user of the Phase I ESA.
- Provided a property owner interview questionnaire to the property owner or a designated subject property representative identified to Rincon by the client.
- Conducted interviews with other property representatives (e.g., key site manager, occupants), as applicable.

## Significant Assumptions, Limitations, Deviations, Exceptions, Special Terms, and Conditions

This work is intended to adhere to good commercial, customary, and generally accepted environmental investigation practices for similar investigations conducted at this time and in this geographic area. No guarantee or warranties, expressed or implied, are provided. The findings and opinions conveyed in this report are based on findings derived from a site reconnaissance, review of an environmental database report and specified regulatory records and historical sources. This report is not intended as a comprehensive site characterization and should not be construed as such. Standard data sources relied upon during the completion of these types of reports may vary

with regard to accuracy and completeness. Although Rincon believes the data sources are reasonably reliable, Rincon cannot and does not guarantee the authenticity or reliability of the data sources it has used. Additionally, pursuant to our contract, the data sources reviewed included only those that are practically reviewable without the need for extraordinary research.

Rincon has not found evidence that hazardous materials or petroleum products exist at the subject property at levels likely to warrant mitigation. Rincon does not under any circumstances warrant or guarantee that not finding evidence of hazardous materials or petroleum products means that hazardous materials or petroleum products do not exist on the subject property. Additional research, including surface or subsurface sampling and analysis, can reduce Client's risks, but no techniques commonly employed can eliminate these risks altogether.

In addition, our scope of services did not include any inquiries with respect to asbestos-containing building materials, biological agents, cultural and historic resources, ecological resources, endangered species, health and safety, indoor air quality unrelated to release of hazardous substances or petroleum products into the environment, industrial hygiene, lead-based paint, lead in drinking water, mold, radon, regulatory compliance, wetlands, or high-voltage power lines.

## User Reliance

CSUF has requested this assessment and will use the information for the updating the CSUF Master Plan. This Phase I ESA was prepared for use solely and exclusively by CSUF. No other use or disclosure is intended or authorized by Rincon. Also, this report is issued with the understanding that it is to be used only in its entirety. It is intended for use only by the client, and no other person or entity may rely upon the report without the express written consent of Rincon.

## Site Description

### Location

The subject property is the campus of CSUF which is located at 800 North State College Boulevard in the City of Fullerton, Orange County, primarily in the block of land between Nutwood Avenue on the south, State College Boulevard on the west, Yorba Linda Boulevard on the north, and State Route 57 (SR 57), the Orange Freeway, on the east. A block of the subject property lies across Nutwood Avenue, which lies between Nutwood Ave to the north, Langsdorf Drive to the east, College Place to the south, and North Commonwealth Avenue to the west. The subject property is located in the northern portion of Orange County, about 1,000 feet west of the Placentia city limit, 2.0 miles northeast of downtown Fullerton, 3.25 miles northeast of downtown Anaheim, and 22 miles southeast of downtown Los Angeles. The project site encompasses approximately 240 acres.

### Subject Property and Vicinity General Characteristics

The subject property is characterized by a central core of academic buildings in the southern half of the campus, with athletic facilities at the central core of the northern portion of the campus. The northern and southern portion are separated by Gymnasium Campus Drive, which running east to west, bisects the campus. The academic buildings on the southern portion of the campus are set among areas landscaped with lawns and other ornamental vegetation. This central core is bordered by paved parking lots and structures to the east and Nutwood Avenue to the south. The western edge of the southern portion is bordered with the Nutwood and State College Parking Structures,

which are separated by Titan Student Union and the CSUF College of the Arts, Department of Visual Arts.

A portion of the campus lies across Nutwood Avenue to the south, which consists of the College Park building and a paved parking lot. A portion of the campus lies across Folino Drive to the east, which consists of the Marriott Hotel.

The athletic facilities in the northern portion of the campus consist of Titan Stadium, Goodwin Field, Anderson Family Field, and the Titan Sports Complex. These are bordered by operations facilities to the west, paved parking lots to the north and west along State College Boulevard and Yorba Linda Boulevard. The Fullerton Arboretum to the east of the athletic facilities is a landscaped open space area, with a small pond, which is adjacent to student and faculty housing on its eastern edge, along Folino Drive.

The subject property is located in an area that is primarily composed of residential, commercial, educational and vacant land uses. Properties in the vicinity of the subject property include the following:

- Hope International University Campus to the south, across Nutwood Avenue; Marshal B Ketchum University to the north, across Yorba Linda Boulevard; and La Vista High School to the west, across State College Boulevard.
- Single-family homes to the west, across State College Boulevard; several multi-family developments to the north, across Yorba Linda Boulevard, to the east, across SR 57, and to the south, along College Place and Nutwood Avenue.
- The Dong Shin Church of China to the northwest, across Yorba Linda Boulevard..
- Several mixed commercial and retail developments, including the University Plaza across Nutwood Avenue, a retail center approximately 1,000 feet south, at the intersection of State College Boulevard and East Chapman Avenue, and a mixed commercial center approximately 1,000 feet to the east of the northeast corner, across SR 57.

The following utility providers service the subject property:

- Electrical Service – Southern California Edison
- Natural Gas Service – Southern California Gas Company
- Water and Sewer Service – City of Fullerton
- Solid Waste Service – MG Disposal

# Records Review

---

## Physical Setting Sources

### Topography

The current USGS topographic map (La Habra, 2012) indicates that the subject property is situated at an elevation of about 250 feet above mean sea level with topography sloping down to the south southwest.

### Geology and Hydrogeology

According to the California Geological Survey (CGS), *California Geomorphic Provinces, Note 36*<sup>1</sup>, the subject property is located within the Peninsular Ranges Geomorphic Province. The Peninsular Ranges are a series of ranges separated by northwest trending valleys, subparallel to faults branching from the San Andreas Fault. The trend of topography is similar to the Coast Ranges, but the geology is more similar to the Sierra Nevada, with granitic rock intruding the older metamorphic rocks. The Peninsular Ranges extend into lower California and are bounded on the east by the Colorado Desert. The Los Angeles Basin and the island group (Santa Catalina, Santa Barbara, and the distinctly terraced San Clemente and San Nicolas islands), together with the surrounding continental shelf (cut by deep submarine fault troughs), are included in this province.

### Site Geology

According to the current USGS Geologic Map (Whittier and La Habra Quadrangles, 2001), the subject property is underlain by surficial sediments, described as “alluvial gravel, sand, and silt of valleys and floodplains.”

### Regional Groundwater Occurrence and Quality

The subject property is located within the Coastal Plain of Orange County groundwater basin.

During the preparation of this Study, we reviewed the California State Water Resources Control Board’s (SWRCB’s) online GeoTracker database to determine groundwater flow direction in the vicinity of the subject property. According to *Case Summary, Fullerton Fire Station #5, 2555 E Yorba Linda Boulevard, Fullerton, California* prepared by the California Regional Water Quality Control Board, Santa Ana Region and dated March 17, 2004, groundwater is encountered between 100 and 125 feet below ground surface (bgs) and flows to the southeast. This property is located adjacent to the north of the subject property, across Yorba Linda Boulevard, approximately 110 feet north of the subject property.

## Standard Environmental Record Sources

Environmental Data Resources, Inc. (EDR) was contracted to provide a database search of public lists of sites that generate, store, treat or dispose of hazardous materials or sites for which a release or

---

<sup>1</sup> [https://www.conservation.ca.gov/cgs/Documents/Publications/Note\\_36.pdf](https://www.conservation.ca.gov/cgs/Documents/Publications/Note_36.pdf)

incident has occurred. The EDR search was conducted for the subject property and included data from surrounding sites within specified radii of the property. A copy of the EDR report, which specifies the ASTM search distance for each public list, is included as Appendix B. As shown on the attached EDR report, federal, state and county lists were reviewed as part of the research effort. Please refer to Appendix B for a complete listing of sites reported by EDR and a description of the databases reviewed.

The Map Findings Summary, included in the EDR report, provides a summary of the databases searched, the number of reported facilities within the search radii, and whether the facility is located onsite or adjacent to the subject property. The following information is based on our review of the Map Findings Summary and the information contained in the EDR report.

## **Subject Property**

The subject property was listed on the following databases (as defined in Appendix D, pages GR-1 to GR-51

- ERNS, HIST UST, **LUST**, **CHMIRS**, EMI, NPDES, CERS, CERS TANKS, MANIFEST, HAZNET, CERS HAZ WASTE, FINDS, ECHO, HIST CORTESE, **RGA LUST**, CIWQS, AST, SWEEPS UST, MLTS, RCRA-LQG, UST as California State University, Fullerton and various onsite facilities at 800 N State College Boulevard
- HAZNET, CERS and EMI databases as the Marriott Hotel and Resort at 2701 Nutwood Avenue
- **RGA LUST** database as Cal State University, Fullerton at 880 North State College Boulevard
- PEST LIC database as Derek J Dobbs at 1900 Associated Road
- HAZNET databases as Fullervale Associates/Rhodes Group, Sheldon Stevens, Inc., Cal State Fullerton Foundation and College Park at 2600 East Nutwood Avenue
- CIWQS database as CSU Fullerton College of Business & Economics at 2555 E Nutwood Avenue
- **CHMIRS** database at Nutwood Avenue & Langsdorf Drive

Regulatory agency files reviewed for the subject property are discussed in the Additional Environmental Record Sources section of this report.

## **Offsite Properties**

Offsite properties listed by EDR fall under two general categories of databases: those reporting unauthorized releases of hazardous substances (e.g., Leaking Underground Storage Tank [LUST], National Priority List [a.k.a. Superfund sites], and corrective action facilities), and databases of businesses permitted to use hazardous materials or generate hazardous wastes, for which an unauthorized release has not been reported to a regulatory agency.

Rincon reviewed the EDR Radius Map and select detailed listings to evaluate their potential to impact the subject property, based on the following factors:

- Reported distance of the facility from the subject property
- The nature of the database on which the facility is listed, and/or whether the facility was listed on a database reporting unauthorized releases of hazardous materials, petroleum products, or hazardous wastes
- Reported case type (e.g., soil only, failed underground storage tank [UST] test only)
- Reported substance released (e.g., chlorinated solvents, gasoline, metals)

- Reported regulatory agency status (e.g., case closed, “no further action”)
- Location of the facility with respect to the reported groundwater flow direction (discussed in the Geology and Hydrogeology section of this report)

Facilities/properties that were interpreted by Rincon to be of potential environmental concern to the subject property, based on one or more of the factors listed above, are summarized in Table 1. In accordance with ASTM, contamination migration pathways in soil, groundwater, and soil vapor were considered in our analysis of offsite properties of potential environmental concern.

**Table 1 EDR Listing Summary of Select Sites Within One-Eighth Mile of the Subject Property**

Site Name	EDR Site ID	Site Address	Distance from Subject Property	Database Reference	Comments
<b>Subject Property</b>					
Not reported	A1, A3, A4, A9, A10, A11, A16, A17, A22, A32-A35	800 N State College Boulevard	Subject Property	ERNS	<p>Release of natural gas from natural gas line equipment failure in July 1990. No additional information provided.</p> <p>Release of 2 gallons of diesel to asphalt from truck fuel tank rupture in August 1992. Absorbents used to clean up asphalt.</p> <p>Forty gallons of oil and diesel impacted soil in September 1994 due to operator error. Spill contained and area isolated. Report indicates that the impacted soil was remediated.</p> <p>Release of 2 gallons of motor oil to asphalt in November 1994. No additional information provided.</p> <p>Tractor hydraulic line ruptures in February 1995. Cleanup reported to be completed. Report indicates that soil will be tested for contamination. No analytical information provided.</p> <p>Release of 4 liters of sulfuric acid and hydrogen peroxide to fume hood/floor in July 1995. The report indicates that the fire department was notified, and the spill was cleaned up.</p> <p>Release of 300 gallons of sulfuric acid in May 1999. Contents spilled into containment unit.</p> <p>Release of 100 pounds of transformer oil (5 parts per million of PCBs) from pole-mounted transformer in October 1997. Release was reported to be secured.</p> <p>Release of 0.299 liters of mercury in McCarthy Hall as result of dropped equipment in June 2001. A hazardous waste contractor was called for cleanup.</p> <p>Release of 13 gallons of gasoline to soil in October 2001. Impacted soil was reported to be excavated and disposed.</p> <p>Release of gasoline in August 2002.</p> <p>Release of 10 gallons of gasoline from storage tank during refueling activities in October 2002.</p> <p>Release of 7 liters of potassium permanganate from equipment failure of a storage tank in a laboratory building in October 2002.</p>
<b>California State University, Fullerton</b>	A2, A19, A20, A23, A30, C37, 38, D42, D43, Orphans			HIST UST	<p>One 12,000-gallon heating fuel oil UST.</p> <p>One 12,000-gallon gasoline UST.</p> <p>One 1,000-gallon gasoline UST installed in 1974.</p> <p>Two 2,000-gallon gasoline USTs installed in 1981.</p> <p>One 2,000-gallone diesel UST.</p> <p>One 100-gallon gasoline UST.</p>
				LUST, CHMIRS	<p>Release of gasoline to soil during tank closure activities in August 1987. Case closed in July 1988. Report indicates that the property was not tested for methyl tert-butyl ether (MTBE).</p> <p>Release of gasoline to soil during tank closure activities in October 1989. Case closed in May 1990. Report indicates that the property was not tested for MTBE.</p> <p>Release of gasoline to soil during tank testing activities in November 1991. Case closed in August 1994. Report indicates that the property was not tested for MTBE.</p>

Site Name	EDR Site ID	Site Address	Distance from Subject Property	Database Reference	Comments
					<p>Release of gasoline impacted soil in August 2002. Report indicates that testing will be done.</p> <p>According to EDR, a release of 80-150 gallons of hydraulic fluid due to equipment failure of elevator hydraulic line occurred in June 2016. According to the records provided by CSUF, a release of approximately 50-100 gallons of hydraulic fluid occurred in May 2016. Based on the results of a pressure test on the distribution line, it was determined that the line had been breached. CSUF Environmental Health and Safety (EHS) recommended that a risk assessment be conducted. In August 2016, Wayne Perry, Inc. conducted a Preliminary Health Risk Assessment (HRA), which included soil sampling. Five soil samples were collected from the vicinity of the underground distribution line, at depths ranging from 4 to 10 feet below ground surface (bgs) and analyzed for total petroleum hydrocarbons as oil (TPHo), volatile organic compounds (VOCs) and Title 22 metals. TPHo was detected ranging from 45 milligrams per kilogram (mg/kg) to 44,000 mg/kg. Methyl isobutyl ketone (MIBK) was detected at a concentration of 63 micrograms per kilogram (µg/kg); however, it was noted that MIBK is not associated with hydraulic oil, but it more likely associated with a laboratory chemical or remnant from building construction. The HRA, using the most conservative and sensitive standards (residential land use, child receptor) indicated that the leaked hydraulic oil did not pose an unacceptable health risk to occupants, and no additional assessment was recommended.</p>
				EMI	No pertinent information provided.

\***Bold** listings indicate a release database

Regulatory agency information reviewed for the listings in the table above are summarized in the Additional Environmental Record Sources section of this report.

## Orphan Listings

EDR reported 10 orphan or unmapped site listings, which EDR is unable to plot due to insufficient address information. Based on Rincon's review of the limited address information, 8 of the 10 listings are located on the subject property and are included in Table 2.

## Additional Environmental Record Sources

Cortese Listings

### Review of Agency Files

As a follow-up to the database search, Rincon reviewed regulatory information for facilities within the specified search radii that were interpreted to have the potential to impact the subject property, based on one or more factors previously discussed (e.g., distance, open case status, upgradient location, soil vapor migration).

The following is a summary of our review of regulatory information obtained from review of online sources (e.g., SWRCB GeoTracker database, Department of Toxic Substances Control [DTSC] EnviroStor database, local fire department). No in-person file reviews were conducted.

## Subject Property

The subject property was listed in numerous databases searched by EDR, including multiple release databases. Most of the releases of concern were associated with the closure of onsite underground storage tanks (USTs). Some of the release case records specifically indicate that although the release case is closed, soil was not analyzed for the presence of MTBE. In addition, although all of the releases have been closed, closure documentation was not available for all of the sites.

## Adjacent Properties

Five adjacent properties were listed in databases searched by EDR; two of those properties were listed as release sites. Based on the information available for the adjacent listings, none of the cases are expected to impact the subject property.

## Upgradient Release Sites

None of the nearby or upgradient listed sites within 1/8 mile are release sites.

## Review of State of California Division of Oil, Gas, and Geothermal Resources Records

A review of the Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR) Online Mapping System<sup>2</sup> indicates that the following wells are located within one-quarter mile of the subject property:

- API 0405905011 – idle, oil & gas well – located approximately 0.22 mile north of the subject property

---

<sup>2</sup> <https://maps.conservation.ca.gov/doggr/wellfinder/>

- API 0405901115 – plugged, dry hole – located approximately 0.09 mile east of the subject property
- API 0405901111 – plugged, dry hole – located approximately 0.16 mile south of the subject property
- API 0405901117 – plugged, dry hole – located approximately 0.15 mile west of the subject property

In addition, the northern portion of the subject property is located directly adjacent to the Coyote East Oil Field. However, no oil wells are located on the subject property.

## Review of National Pipeline Mapping System Records

A review of the National Pipeline Mapping System (NPMS) online Public Map Viewer<sup>3</sup> indicates that one permanently abandoned pipeline, formerly containing crude oil, trends east-west through the central portion of the subject property as shown in Figure 2. According to Hossein Monfared, California State Fire Marshall for hazardous liquids, the pipeline was likely abandoned in place. The exact date of abandonment is unknown; however, Mr. Monfared indicated that the pipeline has been idle since at least 1985.

## Known or Suspect Contaminated Release Sites with Potential Vapor Migration

The EDR report was reviewed to identify nearby known or suspect contaminated sites that have the potential for contaminated vapor originating from the nearby site to be migrating beneath the subject property. Based on the ASTM E 2600-15, *Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*, the following minimum search distances were initially used to determine if contaminated soil vapors from a nearby known or suspect contaminated site have the potential to be migrating beneath the subject property:

- 1/10 mile (528 feet) for petroleum hydrocarbons
- 1/3 mile (1,760 feet) for other contaminants of concern (COCs)

If upgradient known or suspect contaminated sites are located within the above referenced distances from the subject property, online resources are reviewed to determine the extent of the contaminated plume at those sites. The following describes search distances for contaminated plumes of petroleum hydrocarbons (30 feet from the subject property) and other COCs (100 feet from the subject property). Per ASTM E 2600-15, vapors associated with impacted soil or groundwater present within these distances have the potential to migrate beneath the subject property.

### Petroleum Hydrocarbons

Based on our review of the EDR report, and the lack of closure documentation provided for the former onsite releases, several former releases on the subject property have (or have the potential to have) petroleum hydrocarbon-impacted soil vapor migrating beneath the subject property.

---

<sup>3</sup> <https://www.npms.phmsa.dot.gov/PublicViewer/>

## **Other COCs**

Based on our review of the EDR report, there are no upgradient known or suspect sites contaminated with other COCs within 1,760 feet of the subject property. Therefore, per ASTM E 2600-15, as this distance exceeds the 100-foot distance considered the critical distance wherein such migration may pose a threat to the subject property, there are no potential threats to the subject property posed by the potential migration of other COC vapors from listed sites.

## **Historical Use Information on the Property and the Adjoining Properties**

The historical records review completed for this Phase I ESA includes aerial photographs, topographic maps and city directories as detailed in the following sections. Copies of the historical resources reviewed are included in Appendix C.

### **Review of Aerial Photographs**

Aerial photographs from EDR's aerial photograph collection were obtained. In addition, a current aerial from Google Earth was reviewed. The aerial photographs were reviewed on July 18, 2019.

### **Review of Historical Topographic Maps**

Historical topographic maps from EDR's map collection were obtained. The historical topographic maps were reviewed on July 18, 2019.

### **Review of City Directory Listings**

EDR was contracted to provide copies of city directory listings for the subject property. The city directory listings were reviewed on July 18, 2019.

### **Review of Fire Insurance Maps**

As indicated in the attached report, fire insurance maps were not available for the subject property or adjacent properties.

### **Review of City of Fullerton Building Permit Records**

Archived building permit records were reviewed on the City of Fullerton's Community Development website. No permits were relevant information were available.

### **Other Historical Sources**

Based on the historical information obtained, no additional historical sources were reviewed.

### **Summary of Historical Uses**

#### *Subject Property*

Based on our review of the documents listed above, it appears that the subject property was previously developed with the following:

- 1896 to 1898: Few small residential structures scattered throughout subject property; road traverses the far western portion trending in the north-south direction
- 1901 to 1902: Similar to previous usage, with the exception that a stream is now depicted on the northern and western boundaries, traversing the westernmost portion of the subject property
- 1935: Few small residential structures scattered throughout subject property; roads traverse the far western portion and southern half; unimproved road traverses the northern half
- 1938 to 1952: Developed with orchards and a few small residential structures; few roads
- 1963: Orchards still visible on the northern and southern portions. Part of the southern portion and the central portion appear to be under construction. Single large structure visible on southern portion, several small structures visible on the west side of the central portion. Recreational field (baseball) visible on western part of central portion
- 1972 to 1977: Some orchards still visible on the northern portion. Southern half developed with several of the current large structures. Several parking lots are visible along the boundary of the subject property. Former recreational field is no longer visible, but additional recreational fields (football, baseball) are visible on the northern portion
- 1981: Numerous structures ranging in size are visible on the southern half of the property. Several smaller structures located along the western boundary on the northern portion of the property
- 1987 to 1990: Similar to previous land uses, with the exception that orchards are no longer visible and the northeastern portion of the property appears to be developed in its current configuration of an Arboretum. Additional structures are also visible in the northeastern portion
- 1995: Similar to previous land uses, with the exception that the recreational fields on the northern portion of the property appear to have been redeveloped
- 2002: Similar to previous land uses, with the exception that additional structures are visible in the northeastern portion of the subject property
- 2005: similar to previous land uses, with the exception that a former parking lot along the western boundary is now vacant land
- 2009: Similar to previous land uses, with the exception that large structures are now visible in the place of the vacant land identified in 2005, and portions of parking lots along the eastern boundary are now vacant land, appearing to be under construction
- 2012: By 2012, the vacant land along the eastern boundary has been developed with structures and associated new parking areas. An additional structure in the southwestern portion of the subject property is also visible
- 2016 to present day: Similar to previous land uses, with the exception that an additional structure is located near the southwestern portion of the subject property

City directories indicate that the subject property was occupied by California State University, Fullerton and associated listings (i.e. stores, restaurants) from at least 1965 to 1995.

### *Northern Adjacent Properties*

Based on our review of the documents listed above, it appears that the northern adjacent property was developed with the following:

- 1896 to 1902: Road (what is now Yorba Linda Boulevard), vacant land and few small structures. Stream visible in 1901 and 1902
- 1935: Road, vacant land and a few structures with intermittent stream depicted on the western portion
- 1938 to 1952: The majority of the northern adjacent properties are used for agricultural purposes (orchards). Few small structures and roads
- 1963: Similar to previous land uses, with the exception that some vacant land is visible on the eastern and western portions
- 1972: Orchards are no longer visible. Properties appear to be developed or under construction
- 1977 to 1981: Western portion is vacant land followed by several structures. Remainder of the property is developed with commercial and residential structures
- 1987 to present: Similar to previous land usage, with the exception that an additional structure is visible following the vacant land on the western portion, and one property on the eastern portion appears to have been redeveloped into the current gasoline station configuration

### *Eastern Adjacent Properties*

Based on our review of the documents listed above, it appears that the eastern adjacent property was developed with the following:

- 1896 to 1935: Vacant land
  - 1935: Road depicted on southern portion
- 1938 to 1963: Used for agricultural purposes (orchards)
- 1972: Developed with current California State Route 57 followed by orchards on the northern portion, vacant land in the central portion, and current residential/commercial structures on the southern portion
- 1977: Similar to previous usage, with the exception that orchards no longer visible on northern portion and additional structures visible on the central portion
- 1987 to present day: Similar to previous usage with the exception that a large structure is visible on the northern portion

### *Southern Adjacent Properties*

Based on our review of the documents listed above, it appears that the southern adjacent property was developed with the following:

- 1896 to 1898: Mostly vacant land with the exception of a single structure followed by a road
- 1901 to 1902: Similar to previous usage with the exception that three structures are now depicted, followed by a road
- 1935: Similar to previous usage with the exception that unimproved roads are now depicted
- 1938 to 1952: Used for agricultural purposes (orchards) with residential structures visible on the western portion

- 1963: Similar to previous usage with the exception that a portion of the eastern side is now vacant land
- 1972: Developed with a road (Nutwood Avenue), vacant land on the far eastern and far western portions and developed with the existing large structures on the central portion of the property
- 1977 to 1981: Similar to previous usage with the exception that the vacant land on the western portion is now developed with several large structures, its current configuration. Far eastern portion remains vacant land
- 1987 to present: Similar to previous usage with the exception that the far eastern portion is now developed with several structures and associated parking lot, its current configuration

### *Western Adjacent Properties*

Based on our review of the documents listed above, it appears that the western adjacent property was developed with the following:

- 1896 to 1902: Road (what is now N State College Boulevard) followed by vacant land. Stream on the eastern portion depicted in 1901 and 1902
- 1935: Developed with few small structures and unimproved roads. Intermittent stream depicted in the northeast-southwest trending direction
- 1938 to 1952: Used for agricultural purposes with a few structures and stream visible
- 1963: Orchards still visible on the northern portion of the property. Central portion developed with current residential development. Southern portion is vacant land
- 1972 to present: Northern and central portions of the western adjacent properties developed into current residential development. Southern portion developed with multiple structures and recreational fields, its current configuration of a school

### **Gaps in Historical Sources**

Several gaps of greater than five years were identified in the historical records reviewed, from 1902 to 1935, from 1952 to 1963, and from 1995 to 2002. These gaps are considered insignificant because the subject property use appears to be similar prior to and following the gaps.

## Interviews

---

Rincon performed interviews regarding the subject property and surrounding areas. The purpose of the interviews was to discuss current and historical conditions and to obtain information indicating the presence of recognized environmental conditions in connection with the subject property.

### Interview with Site Manager

The site managers were identified as Robert Denman, Environmental Compliance Specialist at CSUF, and Leo Lopez, Associate Director of CSUF. Mr. Denman indicated that the subject property was developed in 1957. Additional Information obtained from Mr. Denman and/or Mr. Lopez is included in the Site Reconnaissance section below.

In addition, additional records pertaining to the location of the onsite generators and documentation pertaining to the onsite release from hydraulic elevator equipment was provided by Mr. Denman.

### Interviews with Occupants

Because the subject property is currently a university, no occupants were interviewed as part of this research effort.

### Interviews with Local Government Officials

A public records request was submitted to the Orange County Health Care Agency (OCHCA), Environmental Health for records pertaining to the subject property on July 2, 2019. OCHCA indicated that due to the large size of the available file, an in-person file review would be required.

Rincon also requested additional information pertaining to the abandonment of the crude oil pipeline traversing the subject property from NPMS on July 19, 2019.

### Interviews with Others

Rincon did not attempt to interview neighboring property owners or others as part of this Phase I ESA.

## Site Reconnaissance

---

Rincon performed a reconnaissance of the subject property on July 2, 2019 accompanied by Robert Denman, Environmental Compliance Specialist at CSUF, and Leo Lopez, Associate Director of CSUF. The purpose of the reconnaissance was to observe existing subject property conditions and to obtain information indicating the presence of recognized environmental conditions in connection with the property.

### Methodology and Limiting Conditions

The site reconnaissance was conducted by:

1. Observing the subject property from public thoroughfares,
2. Observing the adjacent properties from public thoroughfares,
3. Observing the interior of the onsite structures,
4. Observing the exterior of the structures,
5. Backtracking to correlate exterior features with interior features, as necessary, and
6. Observing the subject property from driveways, paved roads, and walking paths.

Because of the large size of the subject property, areas likely to store hazardous materials were targeted.

### Current Use of the Property and Adjacent Properties

The subject property is currently occupied by California State University, Fullerton. Adjacent properties are educational, residential, and commercial.

### Past Use of the Property and Adjacent Properties

Based on our site reconnaissance, past uses at the subject property and adjacent properties are not readily apparent.

### Current or Past Uses in the Surrounding Areas

The subject property is surrounded by residential, commercial and educational land uses as detailed in the Site Description section of this report. Past uses of the surrounding area are not readily apparent based on the site reconnaissance.

### Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions

Geologic, hydrogeologic, hydrologic, and topographic information are as previously stated in the Physical Settings Section of this report.

## General Description of Structures

The subject property is described in the Site Description section of this report.

## Roads

Yorba Linda Boulevard is adjacent to the north, California State Route 57 is adjacent to the east, Nutwood Avenue is adjacent to the south, and Commonwealth Avenue is adjacent to the southwest of the subject property. N State College Boulevard is adjacent to the west, and Dorothy Lane is adjacent to the northwest. Arts Drive, Gym Drive, E Campus Drive, Campus Drive, and W Campus Drive all traverse the subject property.

## Potable Water Supply

The City of Fullerton supplies potable water to the subject property.

## Sewage Disposal System

The City of Fullerton provides sewer service to the subject property.

## Interior and/or Exterior Observations

### **Hazardous Substances and Petroleum Products in Connection with Identified Uses**

Small quantities of various hazardous substances and petroleum products were observed at the following locations:

#### Facilities and Maintenance Auto Shop

- The flammable materials cabinet contains aerosol cans and oil.
- Automobile batteries were stored on secondary containment.
- Transmission fluid, compressor fluid, and other automobile fluids are stored in buckets.
- Aboveground lifts with hydraulic oil reservoirs

#### Receiving Buildings

- The buildings in the receiving area contain paints and flammable materials.
- Parked outside the Receiving buildings are trucks that contain gasoline tanks in the back for fueling various onsite equipment.

#### Student Recreation Center

- Pool chemicals are stored in the rec center, including:
  - Bags of sodium chloride
  - Tanks of hydrochloric acid
  - Tanks of chlorine
- A diesel fuel generator was noted outside the Recreation Center.

Bulk Chemical/Hazardous Waste Area

- Laboratory debris
- Waste chemicals
- Waste storage prior to consolidating
- Radioactive waste from research room
- Pesticide storage for the botany department
- Universal waste including fluorescent tubes and biosafety supplies
- Asbestos waste
- Poly drum of lead acid batteries
- Poly drum of aerosol cans
- 2 poly drums of waste flammable liquids
- Poly drum of waste oxidizing liquids
- Flammable materials cabinets marked miscellaneous chemicals, halogenated waste, EHS supplies, bases, oxidizers/heavy metals, acids

Bulk Chemical Storage outside the Chilling Room

- One tank of sodium hydrochloride
- One tank of citric acid
- Cooling water treatment chemicals

Dan Black Hall (DBH) research building

- Chemical storage in the laboratory supply room
- Biohazardous waste
- Air cylinders

Central Plant (under construction while chillers are being removed/replaced by larger ones)

- Water treatment chemicals
- New refrigerant for construction
- Water softener

Student Housing – Water treatment for HVAC system room

- Sodium hypo-chloride tank
- Chemical sacks for water treatment

Kinesiology and Health Science (KHS) Pool Room

- Three poly drums of muriatic acid

In addition, five non-permitted diesel-fuel generators are located throughout the property. Mr. Denman indicated he can provide us a list and location of the onsite generators.

Rincon did not observe indications of releases from these containers.

## **Storage Tanks**

During the site reconnaissance, we observed a diesel AST near the Receiving buildings. The AST is a 1,500-gallon double walled tank split into two compartments. Both compartments contain diesel fuel. According to the onsite representatives, a minor release near the pump was reported in

February 2019, the area was cleaned with Dawn soap and water, a shop vacuum, and disposed offsite.

## **Odors**

During the site reconnaissance, Rincon did not identify any strong, pungent, or noxious odors.

## **Pools of Liquid**

During the site reconnaissance, no pools of liquid were observed.

## **Drums**

During the site reconnaissance, drums were observed in the following locations:

### Facilities and Maintenance Auto Shop

- Three drums were noted on secondary containment. The drums were marked drained metal clad used oil filters and fuel filters, non-RCRA motor oil/transmission oil, and anti-freeze.

### Bulk Chemical/Hazardous Waste Area (all on secondary containment)

- Six drums of wet soil from a leak in the Student Recreation Center pool.
- Two drums of waste flammable liquid
- One drum of non-RCRA hazardous waste (rags with oil), two of non-RCRA hazardous waste liquid (motor oil), One drum of non-RCRA hazardous waste (debris)

### Chilling Room (all on secondary containment)

- One drum of lubricating oil
- Four drums of non-RCRA hazardous waste (water with oil)
- One drum non-RCRA hazardous waste (paper filters)
- One drum non-RCRA hazardous waste solid (rags with oil)
- One drum lithium bromide solution

Note: many of the drums in the chilling room were related to a minor release when one of the chillers had malfunctioned earlier in the week.

### Central Plant (under construction while chillers are being removed/replaced by larger ones)

- Five drums of lubricants on secondary containment

## **Hazardous Substances and Petroleum Products Containers Not in Connection with Identified Uses**

No hazardous substances or petroleum products not in connection with identified uses were observed at the subject property.

## **Unidentified Substance Containers**

No unidentified substance containers or unidentified containers that might contain hazardous substances were observed during the site reconnaissance.

## **Indications of Polychlorinated Biphenyls (PCBs)**

There are approximately 50 onsite elevators. An elevator leak was reportedly addressed in May 2016. Approximately 80 to 150 gallons of hydraulic fluid was released from the elevator distribution line in the Student Housing building. Reportedly, sampling of the soil was completed; additional information pertaining to the release was requested.

Six onsite transformer leaks have been reported at the property. Mr. Denman provided the locations of all six transformers.

The Facilities and Maintenance Auto Shop operates aboveground lifts with oil reservoirs.

The Titan Student Union north loading dock has a trash compactor. It is unclear if the hydraulic fluid in the compactor contains PCB oils.

The Titan Book Store operates a trash compactor. It is unclear if the hydraulic fluid in the compactor contains PCB oils.

The Dan Black Hall (DBH) research building operates a hydraulic lift used to unload saltwater for the aquarium. It is unclear if the hydraulic fluid in the lift contains PCB oils.

Two trash compactors were noted outside the library. It is unclear if the hydraulic fluid in the compactor contains PCB oils.

The Engineering and Computer Science Building operates indoor hydraulic machinery in the lab for soil and concrete testing. It is unclear if the hydraulic fluid in the machinery contains PCB oils.

One trash compactor was noted outside the Student Housing buildings. It is unclear if the hydraulic fluid in the compactor contains PCB oils.

## **Other Conditions of Concern**

During the site reconnaissance, Rincon did not note any of the following:

- Pools of liquid
- Pits, ponds, and lagoons
- Stained soil or stained pavement
- Stressed vegetation
- Solid waste/debris
- Wastewater
- Wells
- Septic systems/effluent disposal system

**Degreasers/Parts Washers.** A parts washer was noted at the Facilities and Maintenance Auto Shop. Liquid (solvents) from the parts washer is collected in a plastic container and disposed.

**Drains, Clarifiers and Sumps.** A sump pump was noted outside the Facilities and Maintenance Auto Shop. The sump pump is used for stormwater.

A wash rack sump was noted in the washing area in the Receiving buildings. The sump is pumped 3 times per year.

# Evaluation

---

## Findings

Known or suspect recognized environmental conditions associated with the subject property include the following:

- A. Three onsite releases from USTs at known locations
- B. Four onsite releases from USTs at unknown locations
- C. Release from onsite elevator equipment and transformers
- D. Historical use of the subject property for agricultural purposes
- E. Abandoned in-place crude oil pipeline on the subject property
- F. Onsite generators (24)
- G. Aerially-deposited lead in soil areas

## Opinions

- A. **Three onsite releases from USTs at known locations.** According to the regulatory records reviewed, releases from several onsite USTs have been reported. Although there are no current open cases, some of the release cases indicated that soil was not analyzed for the presence of MTBE. In addition, closure documentation was not available for all of the sites. Therefore, the concentration, extent of contamination, and location of contamination remaining onsite is unknown.
- B. **Four onsite releases from USTs at unknown locations.** Same opinion as above.
- C. **Release from onsite elevator equipment and transformer.** A release from onsite elevator equipment was reported to have occurred in May 2016. According to the documents provided by CSUF, approximately 50-100 gallons of hydraulic fluid was released from the elevator distribution line in a student housing building. Soil sampling and a Health Risk Assessment (HRA) were completed. The HRA indicated that the hydraulic oil release does not pose an unacceptable health risk to occupants. No information regarding the cleanup of the impacted soil was provided; therefore, it appears that based on the location of the impacted soil beneath concrete, no remediation was conducted. In addition, various other transformer leaks were reported by the onsite representative.
- D. **Historical use of the subject property for agricultural purposes.** According to the historical records reviewed, the majority of the subject property was used as an orchard from at least 1938 to at least 1977. Due to the historical use of the subject property for agriculture purposes, there is a potential that the subject property could be impacted with pesticides, or other chemicals used routinely in agricultural production.
- E. **Abandoned crude oil pipeline on the subject property.** An abandoned (likely in place) east-west trending crude oil pipeline is located on the central portion of the subject property. It was reported to have been idle since at least 1985. The exact date of abandonment is

unknown. Because the pipeline has not been assessed and removed, soil impacts from potential past releases may be present onsite.

- F. **Onsite Generators.** The locations of the onsite permitted generators and associated fuel storage are included in Appendix A. One reported release from an onsite generator in 1994 was identified, however the concentration, extent of contamination, and location of contamination remaining onsite is unknown. Because the generators have not been assessed, soil impacts from potential past releases may be present onsite.
- G. **Aerially-deposited lead in soil.** Aerial-deposited lead (ADL) was historically deposited by cars burning leaded gasoline and is often found in the soil adjacent to highways. Elevated concentrations of ADL may be present in soil within 50 feet of State Route 57.

## Conclusions

Rincon has performed a Hazardous Materials Technical Study in general conformance with the scope and limitations of ASTM Practice E1527 for California State University, Fullerton located at 800 N State College Boulevard in Fullerton, California. Any exceptions to, or deletions from, this practice are described in the Deviations section of this report. This assessment has revealed evidence of 7 environmental conditions in connection with the subject property as follows:

### Environmental Conditions

1. Three onsite releases from USTs at known locations
2. Four onsite releases from USTs at unknown locations
3. Release from onsite elevator equipment and transformers
4. Historical use of the subject property for agricultural purposes for over 40 years
5. Abandoned in-place crude oil pipeline on the subject property
6. Onsite generators (24)
7. Aerially-deposited lead in soil

## Recommendations

Based on the former releases from onsite USTs, a soil management plan for known and unknown release locations should be prepared prior to redevelopment of the subject property. If discolored or odorous soil is encountered during redevelopment of the subject property, Rincon recommends conducting soil sampling in the area of impacted soil.

To evaluate the subject property impact associated with the former release from an onsite elevator and transformer, a soil management plan should be prepared prior to redevelopment of the subject property. If discolored or odorous soil is encountered during redevelopment of the subject property, Rincon recommends conducting soil sampling the area of impacted soil.

Prior to redevelopment of former agricultural areas, CSUF should collect shallow soil samples from the work area and analyze these samples for pesticides and arsenic. If hazardous materials are detected at elevated concentrations, a soil management plan should be prepared to handle the impacted materials properly.

During redevelopment activities in the vicinity of the abandoned pipeline, if stained/odorous soil is encountered, additional assessment may be warranted. A soil management plan should also be prepared prior to redevelopment of the subject property.

One release from an onsite generator was reported in 1994. Because no documentation pertaining to the cleanup of the release was provided, a soil management plan should be prepared for this release and other potential past releases from all onsite generators prior to redevelopment; if stained/odorous soil is encountered, additional assessment may be warranted.

The highway is located adjacent to the east of the subject property. In this area, if redevelopment is planned within 50 feet of the highway, soil sampling should be conducted.

Although not considered a Recognized Environmental Condition, based on the age of the onsite structure(s) (the earliest in at least 1963) asbestos-containing materials and lead-based paint may be present on the subject property. Therefore, prior to renovation or demolition activities at the subject property, Rincon recommends conducting an asbestos-containing building materials and lead-based paint surveys.

## Deviations

Deviations from ASTM E1527-13 practice were encountered during the completion of this report. User and Owner Interviews were not conducted as part of this assessment.

## Signatures of Environmental Professionals

---

The qualified environmental professionals that are responsible for preparing the report include Walt Hamann, Julie Welch Marshall and Lauren Kodama Roenicke. Their qualifications are summarized in the following section.

“We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 312.10 of 40 CFR 312. We have the specific qualifications based on education, training and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.”

 _____ Signature	April 24, 2020 _____ Date
Walt Hamann, PG, CEG, CHG _____ Name	Principal _____ Title

 _____ Signature	April 24, 2020 _____ Date
Julie Welch Marshall _____ Name	Senior Project Manager _____ Title

 _____ Signature	April 24, 2020 _____ Date
Lauren Kodama Roenicke _____ Name	Environmental Scientist _____ Title

## Qualifications of Environmental Consultants

The environmental consultants responsible for conducting this Phase I ESA and preparing the report include Walt Hamann, Julie Welch Marshall, Lauren Kodama Roenicke and Devin DiNapoli. Their qualifications are summarized below.

Environmental Professional Qualifications	X2.1.1 (2) (i) - Professional Engineer or Professional Geologist License or Registration, and 3 years of full-time relevant experience	X2.1.1 (2) (ii) - Licensed or certified by the Federal Government, State, Tribe, or U.S. Territory to perform environmental inquiries	X2.1.1 (2) (iii) – Baccalaureate or Higher Degree from and accredited institution of higher education in a discipline of engineering or science and the equivalent of 5 years of full-time relevant experience	X2.1.1 (2) (iii) – Equivalent of 10 years of full-time relevant experience
Walt Hamann	PG, CHG, CEG		MS Geology	30 years
Julie Welch Marshall			BS Environmental Engineering	23 years
Lauren Kodama Roenicke			BS Environmental Studies	6 years
Devin DiNapoli			BS Earth Science	4 years

**Walt Hamann**, PG, CEG, CHG, is a Principal and Senior Geologist with Rincon Consultants. He holds a Bachelor of Arts degree in geology from the University of California, Santa Barbara and a Master of Science degree in geology from the University of California, Los Angeles. He has over 30 years of experience conducting assessment and remediation projects and has prepared or overseen the preparation of hundreds of Phase I and Phase II Environmental Site Assessments throughout California. Mr. Hamann is a Professional Geologist (#4742), Certified Engineering Geologist (#1635), and Certified Hydrogeologist (#208) with the State of California.

**Julie Welch Marshall** is a Senior Project Manager with Rincon Consultants. She holds a Bachelor of Science degree in environmental engineering from Rensselaer Polytechnic Institute, Troy, New York, a Hazardous Materials Management Certificate from the University of California, Santa Barbara Extension program, and a Business Management Certificate from the University of California, San Diego Extension program. Ms. Marshall’s responsibilities at Rincon include implementation of site assessments and development of site remediation programs within the Environmental Site Assessment and Remediation Group. Ms. Marshall has extensive experience performing Due Diligence Phase I and Phase II Environmental Site Assessments as well as managing Brownfields and various remediation projects. She has 23 years of experience conducting research, assessment and remediation projects in California.

**Lauren G. Kodama Roenicke** is an Environmental Scientist with Rincon Consultants. She holds a Bachelor of Science degree in Environmental Studies with an outside concentration of Ecology,

Evolution, and Marine Biology from the University of California, Santa Barbara. Ms. Roenicke has experience working on Hazardous Materials Technical Studies for a variety of commercial, rural, and industrial properties. In addition, Ms. Roenicke has been involved in working on large scale, multi-site projects for developers, banks, regulatory agencies, and other public and private Clients. Ms. Roenicke's responsibilities at Rincon include implementation of Phase I and Phase II Environmental Site Assessment Reports, which involve soil, groundwater, and soil vapor assessments.

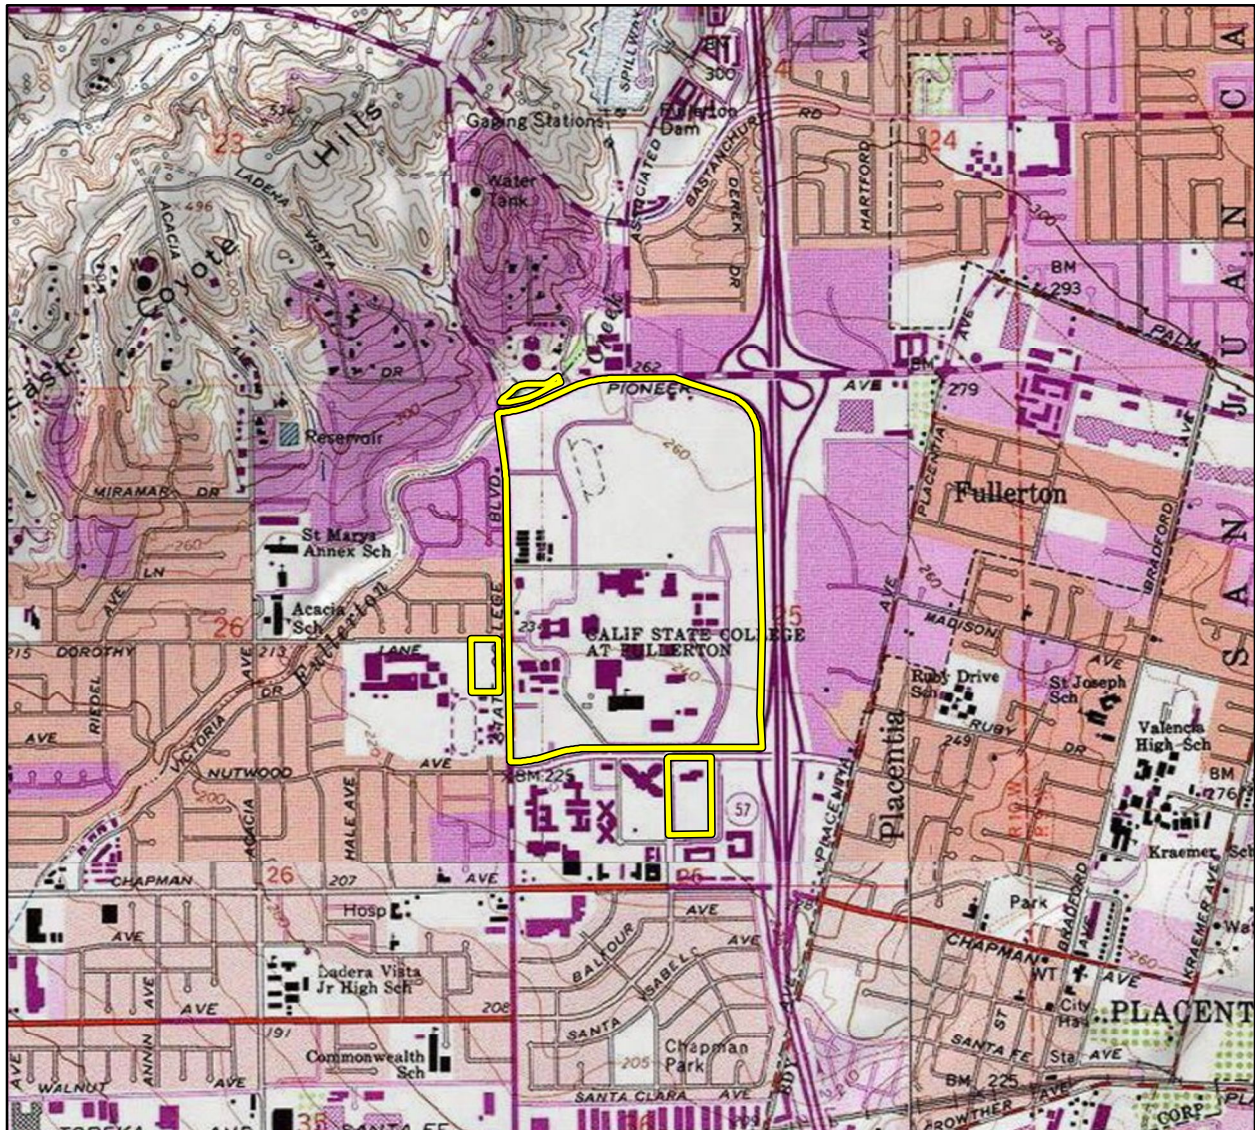

**Devin DiNapoli** is an Environmental Scientist with Rincon Consultants. She holds a Bachelor's Degree in Earth Science from the University of Southern California. Ms. DiNapoli has experience working on Hazardous Materials Technical Studies for a variety of commercial, rural, and industrial properties. She also has experience conducting Phase II projects including soil and soil vapor assessments. Ms. DiNapoli's responsibilities at Rincon include implementation of Phase I and Phase II Environmental Site Assessments and preparing environmental reports.

Interview Documentation

WAYNE PERRY, INC.  
*Environmental Remediation, Construction and Consulting*

August 29, 2016

Ms. Pearl Boelter  
California State University Fullerton  
Environmental Health and Safety  
800 North State College Boulevard  
Fullerton, California 92831

**SUBJECT: PRELIMINARY HEALTH RISK ASSESSMENT  
ELEVATOR HYDRAULIC OIL RELEASE  
CALIFORNIA STATE UNIVERSITY FULLERTON  
RESIDENCE HALLS - ELM BUILDING  
WPI PROJECT: 16.399**

Dear Ms. Boelter;

Wayne Perry, Inc. (WPI), is submitting this report providing results from soil sampling activities and a preliminary health risk assessment conducted in response to a release of hydraulic oil from the California State University Fullerton (CSUF) Elm Building elevator system. The CSUF Elm Building (herein referred to as the "Site"), is located at 800 North State College Boulevard in Fullerton, California. The Site location is shown on **Figure 1**.

### **Background**

The current elevator hydraulic system at the Site consists of two 134 gallon above ground storage tanks (ASTs) containing hydraulic oil and approximately 75 feet of associated underground piping that extend from each AST (located in the Elevator Mechanical Room) to elevator shafts 1 and 2. Main features of the elevator hydraulic system are shown on the plot plan provided as **Figure 2**. It is estimated that approximately 152 gallons of hydraulic oil was released from the underground piping associated with elevator two.

Hydraulic oil is the medium used to transfer power in hydraulic machinery. Most hydraulic fluids are based on mineral oil or water, and have zero compressibility. Hydraulic oil is not

*CSUF-Elm Building, 800 North State College Boulevard, Fullerton, CA*

8281 Commonwealth Ave. Buena Park, California 90621 Phone (714) 826-0352 (800) 883-0352 Fax (714) 523-7880

classified as a hazardous chemical, and is not a carcinogen. There are many different types of hydraulic oils that have been formulated for specific uses, e.g., earth moving equipment, aircraft systems, etc. A Material Safety Data Sheet (MSDS) for typical hydraulic oil is provided in **Appendix A**.

### **Local Geology and Hydrogeology**

Local stratigraphy in the Site area generally consists of fine to coarse grained sand, silty sand sandy silt and silty sand to depths of approximately 135 feet. Depth to groundwater in the Site vicinity is approximately 115 feet.

### **SOIL SAMPLE COLLECTION**

**Pre-Field Activities:** These included the following:

- Preparation of a Site specific Health and Safety Plan;
- Scheduling subcontractors;
- Marking the proposed drilling locations; and
- Notifying Underground Service Alert (USA) and performing an underground utility clearance for the planned drilling locations.

The hydraulic oil piping runs beneath the floor of the central corridor connecting the northern and southern residence halls of the Site. As shown on **Figure 2**, seven sample locations (PP-1 through PP-7) were evenly spaced between the elevator mechanical room and the two elevator shafts. The hydraulic oil piping was visually located in the elevator shaft and confirmed with ground penetrating radar technology to be 3 feet below the concrete floor.

**Utility Clearance:** Overlying concrete was removed by core drilling. The second location to be core drilled (PP-2) struck and severed a live electrical line within the concrete slab. Following this incident, WPI and the utility locator contractor conducted an investigation to determine why the electrical line was not identified by the subsurface utility clearance. Two technologies were used to identify electrical utilities – line tracing and ground penetrating radar. Of these, the most reliable is line tracing, which uses an electronic signal applied to utility to trace its location. However, the investigation found that the electrical line was grounded to rebar within the concrete, water lines and gas lines. All of these are conductive and carried the tracing signal. This created excessive signal noise, and the utilities were interpreted as rebar within the concrete. The ground penetrating radar was unable to differentiate between rebar and the electrical line because it was poured into the concrete slab and appeared as rebar.

Documents provided by CSUF showing proposed utilities at the building indicated a single utility corridor running from the stairwell to the hallway, providing no reason to doubt findings from the utility locating effort.

After the investigation was completed, the remaining sampling locations were shifted away from the electrical line and core drilling was completed without further incident.

**Soil Sampling Activities:** Five soil samples were collected from depths of approximately 4 to 10 feet. These depths correspond to depths of one to seven feet below the hydraulic oil piping.

Due to utility conflicts it was not possible to obtain 5 and 10 foot samples from borings PP-2 through PP-7. However, samples were collected at 4 feet from borings PP-4, PP-6 and PP-7. Samples below the hydraulic oil piping were not possible in borings PP-2, PP-3 and PP-5 due to utility conflicts at 3 feet.

Soil samples were collected using a hand auger. Following collection, samples were immediately labeled, recorded on a chain-of-custody document, and placed in a cooler chilled with crushed ice.

All sampling equipment was washed with an approved non-phosphate detergent and water, double-rinsed, and air dried prior to sample collection and between sampling locations. Soil sampling activities and report generation were conducted under the supervision of a California Professional Geologist.

**Analytical Test Methods:** Soil samples were delivered to Eurofins Calscience Environmental Laboratory (an independent California certified analytical laboratory) in Garden Grove, California, and analyzed for the following constituents using the indicated laboratory methods:

- Total petroleum hydrocarbons as oil (TPH-O) using EPA Method 8015M;
- Volatile organic compounds (VOCs) using EPA Method 8260B; and
- Title 22 metals using EPA Methods 6010B and 7471A.

**Results:** Boring logs were maintained for each sample location. Underlying sediments generally consisted of fine to coarse grained silty sand. Copies of the boring logs are provided as **Appendix B**. Tabulated soil analytical data is provided as **Table 1**.

**Organic Analyses:** Results from the organic analyses are summarized below. The sample number includes the depth, for example sample PP-1d10 was obtained from a depth of 10 feet.

Sample	TPH-O (mg/Kg)	VOCs (µg/Kg)
PP-1d5	<25	<50
PP-1d10	<25	<50
PP-4d4	45 HD	<50
PP-6d4	39,000 HD	<50
PP-7d4	44,000 HD	63

mg/Kg = milligrams per kilogram, equivalent to parts per million

µg/Kg = micrograms per kilogram, equivalent to parts per billion

HD = The chromatographic pattern was inconsistent with the profile of the reference fuel standard.

With the exception of PP-7d4, VOCs were not detected in any of the soil samples. 4-Methyl-2-Pentanone, also known as methyl isobutyl ketone (MIBK), was detected at a concentration of 63 µg/Kg in soil sample PP-7d4. This chemical is not associated with hydraulic oil, and may be a laboratory contaminant or a remnant from building construction. It is not a recognized carcinogen. The MSDS for MIBK is provided in **Appendix A**.

TPH-O was detected in soil samples PP-4d4, PP-6d4 and PP-7d4 at concentrations of 45, 39,000 and 44,000 mg/Kg, respectively. Hydraulic oil is relatively immobile in the environment.

**Metal Analyses:** A slightly elevated lead concentration of 19.8 mg/Kg was detected in soil sample PP-4d4. This is well below its Soluble Threshold Limit Concentration (STLC) of 50 mg/Kg. Other metals detected in the soil samples included arsenic, barium, cadmium, chromium, cobalt, copper, molybdenum, nickel, vanadium and zinc. All detections were at low concentrations consistent with naturally occurring metals. Copies of the laboratory reports and chain-of-custody form are provided as **Appendix C**.

**Release Location:** The highest concentration of TPH-O was detected in the 4-foot sample located adjacent to elevator shaft 2, and concentrations appear to attenuate towards the north. This suggests that the release occurred near elevator shaft 2. The limited sampling conducted by WPI was not sufficient to assess the lateral or vertical extent of impact.

### **PRELIMINARY HEALTH RISK ASSESSMENT**

The primary chemical of concern at the Site is hydraulic fluid. The hydraulic oil MSDS provided in **Appendix A** indicates that hydraulic oil consists of 70 to 90 percent by weight of hydro-treated distillates, 10 to 20 percent highly refined mineral oil and 0.1 to 1 percent 2,6-di-tert-butylphenol. The density of hydraulic oil is approximately 0.88 kg/L. The estimated volume of the release is 152 gallons, or about 575.4 liters, equivalent to a mass of about 506.4 kilograms (Kgs). Based on the weight percentages provided above, this represents an approximate mass of 405 Kgs of hydro-treated distillates, 96 Kgs of highly refined mineral oil, and about 5 Kgs of 2,6-di-tert-butylphenol. The 2,6-di-tert-butylphenol is colorless crystalline solid with low toxicity and is without published exposure limits. It is commonly added to hydraulic oil to prevent oxidation, and it is a negligible portion of the hydraulic oil mixture. The MSDS for 2,6-di-tert-butylphenol is in **Appendix A**.

MIBK was detected in sample PP-7d4 at a concentration of 63 µg/Kg. MIBK is a colorless, tasteless, odorless liquid, commonly used as a solvent. It is not a component of hydraulic fluid and is thought to be either a laboratory contaminant or a remnant from building construction.

**Risk Evaluation:** The United States Environmental Protection Agency (USEPA) Regional Screening Level (RSL) calculator was used to evaluate the potential risk to human health posed by these chemicals in residential soils. The most conservative assumptions were used for each evaluation. The hydro-treated distillates and mineral oil were modeled at the highest detected concentration of 44,000 mg/Kg.

Chemical exposure can occur by inhalation, ingestion, or adsorption. Ingestion and direct contact are not considered complete exposure pathways for Site occupants due to the depth of

impacted soil and the fact that the impacted soil is covered by concrete. Therefore (although these exposure routes were included in the RSL calculations), they are not considered in this preliminary risk evaluation.

Copies of the RSL risk calculations for hydro-treated distillates, mineral oils and MIBK are provide as **Appendix D**. The risk calculations include the acceptable risk values (less than 1.0E-06 for carcinogenic risk and less than 1 for non-carcinogenic risks) and a list of the variables used. The carcinogenic and non-carcinogenic risk associated with each exposure pathway and the cumulative carcinogenic and non-carcinogenic risks are provided at the end of each sheet. For convenience, these are summarized below. As a further conservative measure, only risks pertaining to a child (the most sensitive receptor) were used.

Chemical	Inhalation Risk	
	Non-Carcinogenic	Carcinogenic
Hydro-Treated Distillates (modeled as Naphtha)	3.10E-04	--
Mineral Oil	--	--
MIBK	1.91E-06	--
Cumulative Risk	3.12E-04	--
Acceptable Risk	1	1.0E-06

Results from this evaluation indicate that the leaked hydraulic oil does not pose an unacceptable carcinogenic or non-carcinogenic inhalation health risk to Site occupants.

Utility workers may come into contact with impacted soil during soil excavation for piping removal. However, potential exposure can be mitigated through the use of engineering controls and appropriate personal protective equipment.

#### **Environmental Risk**

Oils are relatively immobile in the environment, and the lateral distribution of oil in subsurface soils is likely limited. This is somewhat substantiated by the decrease in TPH-O concentrations with increasing distance to the north from elevator shaft 2.

Current groundwater monitoring data, associated with open Santa Ana Regional Water Quality Control Board case number 083003521T (located near the northern CSUF campus at the intersection of Yorba Linda Boulevard and Associated Road), reports current groundwater depths of between 114 and 118 feet. Considering the limited volume of hydraulic oil released and the approximate depth to groundwater it is very unlikely that the release has, or will, impact groundwater.

### **Conclusions and Recommendations**

Results of the soil sample analyses identified high concentrations of hydraulic oil at a depth of 4 feet near elevator shafts 1 and 2. Significant concentrations of VOCs and Title 22 metals were not detected.

Ingestion and direct contact are not considered complete exposure pathways for Site occupants due to the depth of impacted soil and the fact that the impacted soil is covered by concrete. Risk calculations using the most conservative assumptions and the highest detected concentrations of TPH-O modeled as naphtha and mineral oil determined that an unacceptable inhalation risk to Site occupants did not exist. Based on these results, no further actions related to human health and environmental risks at the CSUF – Elm building are recommended.

Workers performing the hydraulic system piping removal and replacement may come into contact with impacted soil. It is recommended that these workers wear appropriate personal protective equipment, including air purifying respiratory protection when working in confined areas near either elevator shaft. If an excavation is opened within the structure, fans should be used to provide additional ventilation in the elevator shaft areas.

Soils removed from the excavation should be placed in DOT drums for disposal at an appropriate off-site facility. Each drum should be sampled, sealed and labeled. The drum samples should be analyzed for TPH-O by modified EPA Method 8015. Results from these analyses should be used to select appropriate disposal/recycling options.

### WARRANTY STATEMENT

This report has been prepared by WPI for the exclusive use of California State University Fullerton as it pertains to the Elm Building located at 800 North State College Boulevard Fullerton, California. Our professional services have been performed using that degree of care and skill ordinarily exercised under similar circumstances by other geologists, hydrogeologists, and engineers practicing in this field. No other warranty, express or implied, is made as to the professional advice in this report.

If you have any questions regarding this report, please contact Mr. Robert Deamer of WPI at (714) 826-0352.

Respectfully submitted,  
**WAYNE PERRY, INC.**

Robert Deamer  
Project Geologist

## SECTION 2 HAZARDS IDENTIFICATION

**CLASSIFICATION:** Flammable liquid: Category 4. Aspiration toxicant: Category 1. Acute aquatic toxicant: Category 3. Chronic aquatic toxicant: Category 3.

**Signal Word:** Danger

**Physical Hazards:** Combustible liquid.

**Health Hazards:** May be fatal if swallowed and enters airways.

**Environmental Hazards:** Harmful to aquatic life with long lasting effects.

**PRECAUTIONARY STATEMENTS:**

**Prevention:** Keep away from heat/sparks/open flames/hot surfaces. -- No smoking. Wear protective gloves/protective clothing/eye protection/face protection. Avoid release to the environment.

**Response:** IF SWALLOWED: Immediately call a poison center or doctor/physician. Do NOT induce vomiting. In case of fire: Use media specified in the SDS to extinguish.

**Storage:** Store in a well-ventilated place. Keep cool. Store locked up.

**Disposal:** Dispose of contents/container in accordance with applicable local/regional/national/international regulations.

**HAZARDS NOT OTHERWISE CLASSIFIED:** Not Applicable

<b>SECTION 3 COMPOSITION/ INFORMATION ON INGREDIENTS</b>
--

COMPONENTS	CAS NUMBER	AMOUNT
Distillates, hydrotreated light	64742-47-8	70 - 90 %weight
Highly refined mineral oil (C15 - C50)	Mixture	10 - 20 %weight
2,6-DI-TERT-BUTYLPHENOL	128-39-2	0.1 - 1 %weight

<b>SECTION 4 FIRST AID MEASURES</b>
-------------------------------------

**Description of first aid measures**

**Eye:** No specific first aid measures are required. As a precaution, remove contact lenses, if worn, and flush eyes with water.

**Skin:** Wash skin with water immediately and remove contaminated clothing and shoes. Get medical attention if any symptoms develop. To remove the material from skin, use soap and water. Discard contaminated clothing and shoes or thoroughly clean before reuse.

**Ingestion:** If swallowed, get immediate medical attention. Do not induce vomiting. Never give anything by mouth to an unconscious person.

**Inhalation:** No specific first aid measures are required. If exposed to excessive levels of material in the air, move the exposed person to fresh air. Get medical attention if coughing or respiratory discomfort occurs.

**Most important symptoms and effects, both acute and delayed****IMMEDIATE SYMPTOMS AND HEALTH EFFECTS**

**Eye:** Not expected to cause prolonged or significant eye irritation.

**Skin:** Skin contact may cause drying or defatting of the skin. Contact with the skin is not expected to cause an allergic skin response. Symptoms may include pain, itching, discoloration, swelling, and blistering. Not expected to be harmful to internal organs if absorbed through the skin. High-Pressure Equipment

**Information:** Accidental high-velocity injection under the skin of materials of this type may result in serious injury. Seek medical attention at once should an accident like this occur. The initial wound at the injection site may not appear to be serious at first; but, if left untreated, could result in disfigurement or amputation of the affected part.

**Ingestion:** Because of its low viscosity, this material can directly enter the lungs, if swallowed, or if subsequently vomited. Once in the lungs it is very difficult to remove and can cause severe injury or death.

**Inhalation:** Not expected to be harmful if inhaled. Contains a petroleum-based mineral oil. May cause respiratory irritation or other pulmonary effects following prolonged or repeated inhalation of oil mist at airborne levels above the recommended mineral oil mist exposure limit. Symptoms of respiratory irritation

may include coughing and difficulty breathing.

**DELAYED OR OTHER SYMPTOMS AND HEALTH EFFECTS:** Not classified.

**Indication of any immediate medical attention and special treatment needed**

**Note to Physicians:** Ingestion of this product or subsequent vomiting may result in aspiration of light hydrocarbon liquid, which may cause pneumonitis. In an accident involving high-pressure equipment, this product may be injected under the skin. Such an accident may result in a small, sometimes bloodless, puncture wound. However, because of its driving force, material injected into a fingertip can be deposited into the palm of the hand. Within 24 hours, there is usually a great deal of swelling, discoloration, and intense throbbing pain. Immediate treatment at a surgical emergency center is recommended.

**SECTION 5 FIRE FIGHTING MEASURES**

Leaks/ruptures in high pressure system using materials of this type can create a fire hazard when in the vicinity of ignition sources (eg. open flame, pilot lights, sparks, or electric arcs). See Section 7 for proper handling and storage.

**EXTINGUISHING MEDIA:** Use water fog, foam, dry chemical or carbon dioxide (CO<sub>2</sub>) to extinguish flames.

**PROTECTION OF FIRE FIGHTERS:**

**Fire Fighting Instructions:** For fires involving this material, do not enter any enclosed or confined fire space without proper protective equipment, including self-contained breathing apparatus.

**Combustion Products:** Highly dependent on combustion conditions. A complex mixture of airborne solids, liquids, and gases including carbon monoxide, carbon dioxide, and unidentified organic compounds will be evolved when this material undergoes combustion.

**SECTION 6 ACCIDENTAL RELEASE MEASURES**

**Protective Measures:** Eliminate all sources of ignition in the vicinity of the spill or released vapor. If this material is released into the work area, evacuate the area immediately. Monitor area with combustible gas indicator.

**Spill Management:** Stop the source of the release if you can do it without risk. Contain release to prevent further contamination of soil, surface water or groundwater. Clean up spill as soon as possible, observing precautions in Exposure Controls/Personal Protection. Use appropriate techniques such as applying non-combustible absorbent materials or pumping. All equipment used when handling the product must be grounded. A vapor suppressing foam may be used to reduce vapors. Use clean non-sparking tools to collect absorbed material. Where feasible and appropriate, remove contaminated soil. Place contaminated materials in disposable containers and dispose of in a manner consistent with applicable regulations.

**Reporting:** Report spills to local authorities as appropriate or required.

**SECTION 7 HANDLING AND STORAGE**

**Precautionary Measures:** Do not get in eyes, on skin, or on clothing. Liquid evaporates and forms vapor (fumes) which can catch fire and burn with explosive force. Invisible vapor spreads easily and can be set on fire by many sources such as pilot lights, welding equipment, and electrical motors and switches. Fire hazard is greater as liquid temperature rises above 29C (85F).

DO NOT USE IN HIGH PRESSURE SYSTEMS in the vicinity of flames, sparks and hot surfaces. Use only in well ventilated areas. Keep container closed.

Do not taste or swallow. Wash thoroughly after handling.

**General Storage Information:** DO NOT USE OR STORE near heat, sparks, flames, or hot surfaces . USE

AND STORE ONLY IN WELL VENTILATED AREA. Keep container closed when not in use.

**General Handling Information:** Avoid contaminating soil or releasing this material into sewage and drainage systems and bodies of water.

**Static Hazard:** Electrostatic charge may accumulate and create a hazardous condition when handling this material. To minimize this hazard, bonding and grounding may be necessary but may not, by themselves, be sufficient. Review all operations which have the potential of generating and accumulating an electrostatic charge and/or a flammable atmosphere (including tank and container filling, splash filling, tank cleaning, sampling, gauging, switch loading, filtering, mixing, agitation, and vacuum truck operations) and use appropriate mitigating procedures. For more information, refer to OSHA Standard 29 CFR 1910.106, 'Flammable and Combustible Liquids', National Fire Protection Association (NFPA 77, 'Recommended Practice on Static Electricity', and/or the American Petroleum Institute (API) Recommended Practice 2003, 'Protection Against Ignitions Arising Out of Static, Lightning, and Stray Currents'.

**Container Warnings:** Container is not designed to contain pressure. Do not use pressure to empty container or it may rupture with explosive force. Empty containers retain product residue (solid, liquid, and/or vapor) and can be dangerous. Do not pressurize, cut, weld, braze, solder, drill, grind, or expose such containers to heat, flame, sparks, static electricity, or other sources of ignition. They may explode and cause injury or death. Empty containers should be completely drained, properly closed, and promptly returned to a drum reconditioner or disposed of properly.

## SECTION 8 EXPOSURE CONTROLS/PERSONAL PROTECTION

### GENERAL CONSIDERATIONS:

Consider the potential hazards of this material (see Section 3), applicable exposure limits, job activities, and other substances in the work place when designing engineering controls and selecting personal protective equipment. If engineering controls or work practices are not adequate to prevent exposure to harmful levels of this material, the personal protective equipment listed below is recommended. The user should read and understand all instructions and limitations supplied with the equipment since protection is usually provided for a limited time or under certain circumstances.

### ENGINEERING CONTROLS:

Use in a well-ventilated area.

### PERSONAL PROTECTIVE EQUIPMENT

**Eye/Face Protection:** No special eye protection is normally required. Where splashing is possible, wear safety glasses with side shields as a good safety practice.

**Skin Protection:** Wear protective clothing to prevent skin contact. Selection of protective clothing may include gloves, apron, boots, and complete facial protection depending on operations conducted.

Suggested materials for protective gloves include: 4H (PE/EVAL), Nitrile Rubber, Silver Shield, Viton.

**Respiratory Protection:** No respiratory protection is normally required. Air-Purifying Respirator for Organic Vapors.

If user operations generate an oil mist, determine if airborne concentrations are below the occupational exposure limit for mineral oil mist. If not, wear an approved respirator that provides adequate protection from the measured concentrations of this material. For air-purifying respirators use a particulate cartridge. Use a positive pressure air-supplying respirator in circumstances where air-purifying respirators may not provide adequate protection.

### Occupational Exposure Limits:

Component	Agency	TWA	STEL	Ceiling	Notation
Distillates, hydrotreated light	ACGIH	200 mg/m <sup>3</sup>	--	--	Skin A3 Total

					hydrocarbon vapor
Highly refined mineral oil (C15 - C50)	ACGIH	5 mg/m3	10 mg/m3	--	--
Highly refined mineral oil (C15 - C50)	OSHA Z-1	5 mg/m3	--	--	--
2,6-DI-TERT-BUTYLPHENOL	Not Applicable	--	--	--	--

Consult local authorities for appropriate values.

## SECTION 9 PHYSICAL AND CHEMICAL PROPERTIES

**Attention: the data below are typical values and do not constitute a specification.**

**Color:** Red

**Physical State:** Liquid

**Odor:** Petroleum odor

**Odor Threshold:** No data available

**pH:** Not Applicable

**Vapor Pressure:** <0.01 mmHg @ 37.8 °C (100 °F)

**Vapor Density (Air = 1):** >4

**Initial Boiling Point:** 207.2°C (405°F)

**Solubility:** Soluble in hydrocarbons; insoluble in water

**Freezing Point:** Not Applicable

**Melting Point:** Not Applicable

**Specific Gravity:** 0.86 kg/l - 0.9 kg/l @ 15°C (59°F)

**Density:** 0.86 kg/l - 0.9 kg/l @ 15°C (59°F)

**Viscosity:** 13.2 mm<sup>2</sup>/s @ 40°C (104°F) Minimum

**Coefficient of Therm. Expansion / °F:** Not Applicable

**Evaporation Rate:** No data available

**Decomposition temperature:** No Data Available

**Octanol/Water Partition Coefficient:** No data available

### FLAMMABLE PROPERTIES:

**Flammability (solid, gas):** No Data Available

**Flashpoint:** (Pensky-Martens Closed Cup) 80 °C (176 °F) Minimum

**Autoignition:** No data available

**Flammability (Explosive) Limits (% by volume in air):** Lower: Not Applicable Upper: Not Applicable

## SECTION 10 STABILITY AND REACTIVITY

**Reactivity:** This material is not expected to react.

**Chemical Stability:** This material is considered stable under normal ambient and anticipated storage and handling conditions of temperature and pressure.

**Incompatibility With Other Materials:** Not applicable

**Hazardous Decomposition Products:** None known (None expected)

**Hazardous Polymerization:** Hazardous polymerization will not occur.

## SECTION 11 TOXICOLOGICAL INFORMATION

**Information on toxicological effects**

**Serious Eye Damage/Irritation:** The eye irritation hazard is based on evaluation of data for product components.

**Skin Corrosion/Irritation:** The skin irritation hazard is based on evaluation of data for product components.

**Skin Sensitization:** The skin sensitization hazard is based on evaluation of data for product components.

**Acute Dermal Toxicity:** The acute dermal toxicity hazard is based on evaluation of data for product components.

**Acute Oral Toxicity:** The acute oral toxicity hazard is based on evaluation of data for product components.

**Acute Inhalation Toxicity:** The acute inhalation toxicity hazard is based on evaluation of data for product components.

**Acute Toxicity Estimate:** Not Determined

**Germ Cell Mutagenicity:** The hazard evaluation is based on data for components or a similar material.

**Carcinogenicity:** The hazard evaluation is based on data for components or a similar material.

**Reproductive Toxicity:** The hazard evaluation is based on data for components or a similar material.

**Specific Target Organ Toxicity - Single Exposure:** The hazard evaluation is based on data for components or a similar material.

**Specific Target Organ Toxicity - Repeated Exposure:** The hazard evaluation is based on data for components or a similar material.

**ADDITIONAL TOXICOLOGY INFORMATION:**

This product contains petroleum base oils which may be refined by various processes including severe solvent extraction, severe hydrocracking, or severe hydrotreating. None of the oils requires a cancer warning under the OSHA Hazard Communication Standard (29 CFR 1910.1200). These oils have not been listed in the National Toxicology Program (NTP) Annual Report nor have they been classified by the International Agency for Research on Cancer (IARC) as; carcinogenic to humans (Group 1), probably carcinogenic to humans (Group 2A), or possibly carcinogenic to humans (Group 2B).

These oils have not been classified by the American Conference of Governmental Industrial Hygienists (ACGIH) as: confirmed human carcinogen (A1), suspected human carcinogen (A2), or confirmed animal carcinogen with unknown relevance to humans (A3).

**SECTION 12 ECOLOGICAL INFORMATION**

**ECOTOXICITY**

This material is expected to be harmful to aquatic organisms and may cause long-term adverse effects in the aquatic environment. The ecotoxicity hazard is based on an evaluation of data for the components or a similar material. The product has not been tested. The statement has been derived from the properties of the individual components.

**MOBILITY**

No data available.

**PERSISTENCE AND DEGRADABILITY**

This material is not expected to be readily biodegradable. The biodegradability of this material is based on an evaluation of data for the components or a similar material. The product has not been tested. The statement has been derived from the properties of the individual components.

**POTENTIAL TO BIOACCUMULATE**

Bioconcentration Factor: No data available.

Octanol/Water Partition Coefficient: No data available

<b>SECTION 13 DISPOSAL CONSIDERATIONS</b>
---

Use material for its intended purpose or recycle if possible. Oil collection services are available for used oil recycling or disposal. Place contaminated materials in containers and dispose of in a manner consistent with applicable regulations. Contact your sales representative or local environmental or health authorities for approved disposal or recycling methods.

<b>SECTION 14 TRANSPORT INFORMATION</b>
---

The description shown may not apply to all shipping situations. Consult 49CFR, or appropriate Dangerous Goods Regulations, for additional description requirements (e.g., technical name) and mode-specific or quantity-specific shipping requirements.

**DOT Shipping Description:** UN1268, PETROLEUM PRODUCTS, N.O.S., COMBUSTIBLE LIQUID, III ;  
**ADDITIONAL INFORMATION:** NON-BULK PACKAGES ARE NOT REGULATED IN THE USA. SEE  
 173.150 (F) FOR SPECIAL PROVISIONS FOR VESSEL AND AIRCRAFT

**IMO/IMDG Shipping Description:** NOT REGULATED AS DANGEROUS GOODS FOR  
 TRANSPORTATION UNDER THE IMDG CODE

**ICAO/IATA Shipping Description:** NOT REGULATED AS DANGEROUS GOODS UNDER THE ICAO TI /  
 IATA DGR CODE

**Transport in bulk according to Annex II of MARPOL 73/78 and the IBC code:**  
 Not applicable

<b>SECTION 15 REGULATORY INFORMATION</b>
--

<b>EPCRA 311/312 CATEGORIES:</b>	1. Immediate (Acute) Health Effects:	YES
	2. Delayed (Chronic) Health Effects:	NO
	3. Fire Hazard:	YES
	4. Sudden Release of Pressure Hazard:	NO
	5. Reactivity Hazard:	NO

**REGULATORY LISTS SEARCHED:**

01-1=IARC Group 1

03=EPCRA 313

01-2A=IARC Group 2A	04=CA Proposition 65
01-2B=IARC Group 2B	05=MA RTK
02=NTP Carcinogen	06=NJ RTK
	07=PA RTK

No components of this material were found on the regulatory lists above.

**CHEMICAL INVENTORIES:**

All components comply with the following chemical inventory requirements: AICS (Australia), DSL (Canada), ENCS (Japan), IECSC (China), KECI (Korea), PICCS (Philippines), TSCA (United States).

**NEW JERSEY RTK CLASSIFICATION:**

Under the New Jersey Right-to-Know Act L. 1983 Chapter 315 N.J.S.A. 34:5A-1 et. seq., the product is to be identified as follows: PETROLEUM OIL (Hydraulic oil)

<b>SECTION 16 OTHER INFORMATION</b>
-------------------------------------

**NFPA RATINGS:** Health: 0 Flammability: 2 Reactivity: 0

**HMIS RATINGS:** Health: 1 Flammability: 2 Reactivity: 0  
 (0-Least, 1-Slight, 2-Moderate, 3-High, 4-Extreme, PPE:- Personal Protection Equipment Index recommendation, \*- Chronic Effect Indicator). These values are obtained using the guidelines or published evaluations prepared by the National Fire Protection Association (NFPA) or the National Paint and Coating Association (for HMIS ratings).

**LABEL RECOMMENDATION:**

Label Category : INDUSTRIAL OIL 4 - IND4, COMBUSTIBLE 1 - COM1

**REVISION STATEMENT:** This revision updates the following sections of this Safety Data Sheet: 2,5,14,16  
**Revision Date:** JULY 21, 2014

**ABBREVIATIONS THAT MAY HAVE BEEN USED IN THIS DOCUMENT:**

TLV - Threshold Limit Value	TWA - Time Weighted Average
STEL - Short-term Exposure Limit	PEL - Permissible Exposure Limit
GHS - Globally Harmonized System	CAS - Chemical Abstract Service Number
ACGIH - American Conference of Governmental Industrial Hygienists	IMO/IMDG - International Maritime Dangerous Goods Code
API - American Petroleum Institute	SDS - Safety Data Sheet
HMIS - Hazardous Materials Information System	NFPA - National Fire Protection Association (USA)
DOT - Department of Transportation (USA)	NTP - National Toxicology Program (USA)
IARC - International Agency for Research on Cancer	OSHA - Occupational Safety and Health Administration
NCEL - New Chemical Exposure Limit	EPA - Environmental Protection Agency
SCBA - Self-Contained Breathing Apparatus	

Prepared according to the 29 CFR 1910.1200 (2012) by Chevron Energy Technology Company, 6001

## Material Safety Data Sheet Methyl isobutyl ketone MSDS

### Section 1: Chemical Product and Company Identification

**Product Name:** Methyl isobutyl ketone

**Catalog Codes:** SLM3412

**CAS#:** 108-10-1

**RTECS:** SA9275000

**TSCA:** TSCA 8(b) inventory: Methyl isobutyl ketone

**CI#:** Not available.

**Synonym:** 4-Methyl-2-pentanone

**Chemical Formula:** C<sub>6</sub>H<sub>12</sub>O

**Contact Information:**

**Sciencelab.com, Inc.**

14025 Smith Rd.

Houston, Texas 77396

US Sales: **1-800-901-7247**

International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

**CHEMTREC (24HR Emergency Telephone), call:**  
1-800-424-9300

**International CHEMTREC, call:** 1-703-527-3887

**For non-emergency assistance, call:** 1-281-441-4400

### Section 2: Composition and Information on Ingredients

**Composition:**

Name	CAS #	% by Weight
Methyl isobutyl ketone	108-10-1	100

**Toxicological Data on Ingredients:** Methyl isobutyl ketone: ORAL (LD50): Acute: 1600 mg/kg [Guinea pig]. 2671 mg/kg [Mouse]. 2080 mg/kg [Rat]. DERMAL (LD50): Acute: 20001 mg/kg [Rabbit]. VAPOR (LC50): Acute: 8000 ppm 4 hour(s) [Rat].

### Section 3: Hazards Identification

**Potential Acute Health Effects:**

Very hazardous in case of eye contact (irritant), of ingestion, of inhalation. Hazardous in case of skin contact (irritant, permeator). Inflammation of the eye is characterized by redness, watering, and itching.

**Potential Chronic Health Effects:**

CARCINOGENIC EFFECTS: Not available. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. The substance is toxic to lungs, the nervous system, mucous membranes. Repeated or prolonged exposure to the substance can produce target organs damage.

### Section 4: First Aid Measures

**Eye Contact:**

Check for and remove any contact lenses. Immediately flush eyes with running water for at least 15 minutes, keeping eyelids open. Cold water may be used. Do not use an eye ointment. Seek medical attention.

**Skin Contact:**

After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cold water may be used. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

**Serious Skin Contact:**

Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek immediate medical attention.

**Inhalation:** Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

**Serious Inhalation:**

Evacuate the victim to a safe area as soon as possible. Loosen tight clothing such as a collar, tie, belt or waistband. If breathing is difficult, administer oxygen. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek medical attention.

**Ingestion:**

Do not induce vomiting. Examine the lips and mouth to ascertain whether the tissues are damaged, a possible indication that the toxic material was ingested; the absence of such signs, however, is not conclusive. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

**Serious Ingestion:** Not available.

### Section 5: Fire and Explosion Data

**Flammability of the Product:** Flammable.

**Auto-Ignition Temperature:** 460°C (860°F)

**Flash Points:** CLOSED CUP: 14°C (57.2°F). OPEN CUP: 23°C (73.4°F).

**Flammable Limits:** LOWER: 1.4% UPPER: 7.5%

**Products of Combustion:** These products are carbon oxides (CO, CO<sub>2</sub>).

**Fire Hazards in Presence of Various Substances:** Flammable in presence of open flames and sparks.

**Explosion Hazards in Presence of Various Substances:**

Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

**Fire Fighting Media and Instructions:**

Flammable liquid, soluble or dispersed in water. SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use alcohol foam, water spray or fog.

**Special Remarks on Fire Hazards:** Not available.

**Special Remarks on Explosion Hazards:** Not available.

### Section 6: Accidental Release Measures

**Small Spill:**

Dilute with water and mop up, or absorb with an inert dry material and place in an appropriate waste disposal container.

**Large Spill:**

Flammable liquid. Keep away from heat. Keep away from sources of ignition. Stop leak if without risk. Absorb with DRY earth, sand or other non-combustible material. Do not touch spilled material. Prevent entry into sewers, basements or confined areas; dike if needed. Eliminate all ignition sources. Be careful that the product is not present at a concentration level above TLV. Check TLV on the MSDS and with local authorities.

## Section 7: Handling and Storage

### Precautions:

Keep away from heat. Keep away from sources of ignition. Ground all equipment containing material. Do not ingest. Do not breathe gas/fumes/ vapour/spray. In case of insufficient ventilation, wear suitable respiratory equipment. If ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes.

### Storage:

Flammable materials should be stored in a separate safety storage cabinet or room. Keep away from heat. Keep away from sources of ignition. Keep container tightly closed. Keep in a cool, well-ventilated place. Ground all equipment containing material. A refrigerated room would be preferable for materials with a flash point lower than 37.8°C (100°F).

## Section 8: Exposure Controls/Personal Protection

### Engineering Controls:

Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective threshold limit value. Ensure that eyewash stations and safety showers are proximal to the work-station location.

### Personal Protection:

Splash goggles. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

### Personal Protection in Case of a Large Spill:

Splash goggles. Full suit. Vapor respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

### Exposure Limits:

TWA: 50 STEL: 75 CEIL: 125 (ppm) from ACGIH (TLV) [1995] TWA: 205 STEL: 300 CEIL: 510 (mg/m<sup>3</sup>) from ACGIH [1995]  
Consult local authorities for acceptable exposure limits.

## Section 9: Physical and Chemical Properties

**Physical state and appearance:** Liquid.

**Odor:** Not available.

**Taste:** Not available.

**Molecular Weight:** 100.16 g/mole

**Color:** Not available.

**pH (1% soln/water):** Not available.

**Boiling Point:** 115.9°C (240.6°F)

**Melting Point:** -84°C (-119.2°F)

**Critical Temperature:** Not available.

**Specific Gravity:** 0.802 (Water = 1)

**Vapor Pressure:** 15.7 mm of Hg (@ 20°C)

**Vapor Density:** 3.45 (Air = 1)

**Volatility:** Not available.

**Odor Threshold:** 0.1 ppm

**Water/Oil Dist. Coeff.:** The product is equally soluble in oil and water; log(oil/water) = 0.1

**Ionicity (in Water):** Not available.

**Dispersion Properties:** See solubility in water.

**Solubility:** Partially soluble in cold water.

### Section 10: Stability and Reactivity Data

**Stability:** The product is stable.

**Instability Temperature:** Not available.

**Conditions of Instability:** Not available.

**Incompatibility with various substances:** Not available.

**Corrosivity:** Not available.

**Special Remarks on Reactivity:** Forms explosive peroxides on prolonged storage.

**Special Remarks on Corrosivity:** Not available.

**Polymerization:** No.

### Section 11: Toxicological Information

**Routes of Entry:** Dermal contact. Eye contact. Inhalation. Ingestion.

**Toxicity to Animals:**

WARNING: THE LC50 VALUES HEREUNDER ARE ESTIMATED ON THE BASIS OF A 4-HOUR EXPOSURE. Acute oral toxicity (LD50): 1600 mg/kg [Guinea pig]. Acute dermal toxicity (LD50): 20001 mg/kg [Rabbit]. Acute toxicity of the vapor (LC50): 8000 ppm 4 hour(s) [Rat].

**Chronic Effects on Humans:** The substance is toxic to lungs, the nervous system, mucous membranes.

**Other Toxic Effects on Humans:**

Very hazardous in case of ingestion, of inhalation. Hazardous in case of skin contact (irritant, permeator).

**Special Remarks on Toxicity to Animals:** Not available.

**Special Remarks on Chronic Effects on Humans:** Passes through the placental barrier in human.

**Special Remarks on other Toxic Effects on Humans:** Not available.

### Section 12: Ecological Information

**Ecotoxicity:** Not available.

**BOD5 and COD:** Not available.

**Products of Biodegradation:**

Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

**Toxicity of the Products of Biodegradation:** The products of degradation are less toxic than the product itself.

**Special Remarks on the Products of Biodegradation:** Not available.

### Section 13: Disposal Considerations

**Waste Disposal:**

### Section 14: Transport Information

**DOT Classification:** Class 3: Flammable liquid.

**Identification :** Methyl isobutyl ketone : UN1245 PG: II

**Special Provisions for Transport:** Not available.

### Section 15: Other Regulatory Information

**Federal and State Regulations:**

Pennsylvania RTK: Methyl isobutyl ketone Massachusetts RTK: Methyl isobutyl ketone TSCA 8(b) inventory: Methyl isobutyl ketone SARA 313 toxic chemical notification and release reporting: Methyl isobutyl ketone CERCLA: Hazardous substances.: Methyl isobutyl ketone

**Other Regulations:** OSHA: Hazardous by definition of Hazard Communication Standard (29 CFR 1910.1200).

**Other Classifications:**

**WHMIS (Canada):** CLASS B-2: Flammable liquid with a flash point lower than 37.8°C (100°F).

**DSCL (EEC):**

R11- Highly flammable. R38- Irritating to skin. R41- Risk of serious damage to eyes.

**HMIS (U.S.A.):**

**Health Hazard:** 2

**Fire Hazard:** 3

**Reactivity:** 0

**Personal Protection:** h

**National Fire Protection Association (U.S.A.):**

**Health:** 2

**Flammability:** 3

**Reactivity:** 1

**Specific hazard:**

**Protective Equipment:**

Gloves. Lab coat. Vapor respirator. Be sure to use an approved/certified respirator or equivalent. Wear appropriate respirator when ventilation is inadequate. Splash goggles.

### Section 16: Other Information

**References:** Not available.

**Other Special Considerations:** Not available.

## Material Safety Data Sheet 2,6-Ditert-butylphenol MSDS

### Section 1: Chemical Product and Company Identification

**Product Name:** 2,6-Ditert-butylphenol

**Catalog Codes:** SLD2173

**CAS#:** 128-39-2

**RTECS:** SK8265000

**TSCA:** TSCA 8(b) inventory: 2,6-Ditert-butylphenol

**CI#:** Not available.

**Synonym:**

**Chemical Name:** Not available.

**Chemical Formula:** C<sub>14</sub>H<sub>13</sub>O

**Contact Information:**

**Sciencelab.com, Inc.**

14025 Smith Rd.

Houston, Texas 77396

US Sales: **1-800-901-7247**

International Sales: **1-281-441-4400**

Order Online: ScienceLab.com

**CHEMTREC (24HR Emergency Telephone), call:**  
1-800-424-9300

**International CHEMTREC, call:** 1-703-527-3887

**For non-emergency assistance, call:** 1-281-441-4400

### Section 2: Composition and Information on Ingredients

**Composition:**

Name	CAS #	% by Weight
{2,6-}Di{tert-}butylphenol	128-39-2	100

**Toxicological Data on Ingredients:** 2,6-Ditert-butylphenol: ORAL (LD50): Acute: 9200 mg/kg [Rat]. DERMAL (LD50): Acute: 10000 mg/kg [Rabbit].

### Section 3: Hazards Identification

**Potential Acute Health Effects:**

Hazardous in case of skin contact (irritant), of eye contact (irritant), of ingestion. Slightly hazardous in case of skin contact (permeator), of inhalation (lung irritant).

**Potential Chronic Health Effects:**

CARCINOGENIC EFFECTS: Not available. MUTAGENIC EFFECTS: Not available. TERATOGENIC EFFECTS: Not available. DEVELOPMENTAL TOXICITY: Not available. Repeated or prolonged exposure is not known to aggravate medical condition.

### Section 4: First Aid Measures

**Eye Contact:** Check for and remove any contact lenses. Do not use an eye ointment. Seek medical attention.

**Skin Contact:**

After contact with skin, wash immediately with plenty of water. Gently and thoroughly wash the contaminated skin with running water and non-abrasive soap. Be particularly careful to clean folds, crevices, creases and groin. Cover the irritated skin with an emollient. If irritation persists, seek medical attention. Wash contaminated clothing before reusing.

**Serious Skin Contact:**

Wash with a disinfectant soap and cover the contaminated skin with an anti-bacterial cream. Seek medical attention.

**Inhalation:** Allow the victim to rest in a well ventilated area. Seek immediate medical attention.

**Serious Inhalation:** Not available.

**Ingestion:**

Do not induce vomiting. Loosen tight clothing such as a collar, tie, belt or waistband. If the victim is not breathing, perform mouth-to-mouth resuscitation. Seek immediate medical attention.

**Serious Ingestion:** Not available.

**Section 5: Fire and Explosion Data**

**Flammability of the Product:** May be combustible at high temperature.

**Auto-Ignition Temperature:** Not available.

**Flash Points:** Not available.

**Flammable Limits:** Not available.

**Products of Combustion:** These products are carbon oxides (CO, CO<sub>2</sub>).

**Fire Hazards in Presence of Various Substances:** Not available.

**Explosion Hazards in Presence of Various Substances:**

Risks of explosion of the product in presence of mechanical impact: Not available. Risks of explosion of the product in presence of static discharge: Not available.

**Fire Fighting Media and Instructions:**

SMALL FIRE: Use DRY chemical powder. LARGE FIRE: Use water spray, fog or foam. Do not use water jet.

**Special Remarks on Fire Hazards:** Not available.

**Special Remarks on Explosion Hazards:** Not available.

**Section 6: Accidental Release Measures****Small Spill:**

Use appropriate tools to put the spilled solid in a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and dispose of according to local and regional authority requirements.

**Large Spill:**

Use a shovel to put the material into a convenient waste disposal container. Finish cleaning by spreading water on the contaminated surface and allow to evacuate through the sanitary system.

**Section 7: Handling and Storage****Precautions:**

Keep away from heat. Keep away from sources of ignition. Empty containers pose a fire risk, evaporate the residue under a fume hood. Ground all equipment containing material. Do not ingest. Do not breathe dust. Wear suitable protective clothing if ingested, seek medical advice immediately and show the container or the label. Avoid contact with skin and eyes

**Storage:**

Keep container dry. Keep in a cool place. Ground all equipment containing material. Keep container tightly closed. Keep in a cool, well-ventilated place. Combustible materials should be stored away from extreme heat and away from strong oxidizing agents.

### Section 8: Exposure Controls/Personal Protection

**Engineering Controls:**

Use process enclosures, local exhaust ventilation, or other engineering controls to keep airborne levels below recommended exposure limits. If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit.

**Personal Protection:**

Splash goggles. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Gloves.

**Personal Protection in Case of a Large Spill:**

Splash goggles. Full suit. Dust respirator. Boots. Gloves. A self contained breathing apparatus should be used to avoid inhalation of the product. Suggested protective clothing might not be sufficient; consult a specialist BEFORE handling this product.

**Exposure Limits:** Not available.

### Section 9: Physical and Chemical Properties

**Physical state and appearance:** Solid. (Crystalline solid.)

**Odor:** Practically odorless

**Taste:** Not available.

**Molecular Weight:** 206.33 g/mole

**Color:** Not available.

**pH (1% soln/water):** Not applicable.

**Boiling Point:** 253°C (487.4°F)

**Melting Point:** 36°C (96.8°F)

**Critical Temperature:** Not available.

**Specific Gravity:** 0.92 (Water = 1)

**Vapor Pressure:** Not applicable.

**Vapor Density:** Not available.

**Volatility:** Not available.

**Odor Threshold:** Not available.

**Water/Oil Dist. Coeff.:** Not available.

**Ionicity (in Water):** Not available.

**Dispersion Properties:** Not available.

**Solubility:** Insoluble in cold water.

### Section 10: Stability and Reactivity Data

**Stability:** The product is stable.

**Instability Temperature:** Not available.

**Conditions of Instability:** Not available.

**Incompatibility with various substances:** Not available.

**Corrosivity:** Non-corrosive in presence of glass.

**Special Remarks on Reactivity:** Not available.

**Special Remarks on Corrosivity:** Not available.

**Polymerization:** No.

### Section 11: Toxicological Information

**Routes of Entry:** Eye contact. Ingestion.

**Toxicity to Animals:**

Acute oral toxicity (LD50): 9200 mg/kg [Rat]. Acute dermal toxicity (LD50): 10000 mg/kg [Rabbit].

**Chronic Effects on Humans:** Not available.

**Other Toxic Effects on Humans:**

Hazardous in case of skin contact (irritant), of ingestion. Slightly hazardous in case of skin contact (permeator), of inhalation (lung irritant).

**Special Remarks on Toxicity to Animals:** Not available.

**Special Remarks on Chronic Effects on Humans:** Not available.

**Special Remarks on other Toxic Effects on Humans:** Not available.

### Section 12: Ecological Information

**Ecotoxicity:** Not available.

**BOD5 and COD:** Not available.

**Products of Biodegradation:**

Possibly hazardous short term degradation products are not likely. However, long term degradation products may arise.

**Toxicity of the Products of Biodegradation:** The products of degradation are more toxic.

**Special Remarks on the Products of Biodegradation:** Not available.

### Section 13: Disposal Considerations

**Waste Disposal:**

### Section 14: Transport Information

**DOT Classification:** Not a DOT controlled material (United States).

**Identification:** Not applicable.

**Special Provisions for Transport:** Not applicable.

### Section 15: Other Regulatory Information

**Federal and State Regulations:**

TSCA 8(b) inventory: 2,6-Ditert-butylphenol SARA 302/304 emergency planning and notification: 2,6-Ditert-butylphenol  
CERCLA: Hazardous substances.: 2,6-Ditert-butylphenol: 1000 lbs. (453.6 kg)

**Other Regulations:** Not available..

**Other Classifications:**

**WHMIS (Canada):** Not controlled under WHMIS (Canada).

**DSCL (EEC):** R36/38- Irritating to eyes and skin.

**HMIS (U.S.A.):**

**Health Hazard:** 2

**Fire Hazard:** 1

**Reactivity:** 0

**Personal Protection:** E

**National Fire Protection Association (U.S.A.):**

**Health:** 2

**Flammability:** 1

**Reactivity:** 0

**Specific hazard:**

**Protective Equipment:**

Gloves. Lab coat. Dust respirator. Be sure to use an approved/certified respirator or equivalent. Splash goggles.

## Section 16: Other Information

**References:** Not available.

**Other Special Considerations:** Not available.

**Created:** 10/09/2005 05:07 PM

**Last Updated:** 05/21/2013 12:00 PM

Eurofins Calscience, Inc. (Calscience) certifies that the test results provided in this report meet all NELAC requirements for parameters for which accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

Page 1 of 1

---

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 08/11/16. They were assigned to Work Order 16-08-0890.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq$  15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

Location:	<b>Elm Student Housing – Elevator #2</b>
Person in Charge:	<b>Michael Anthony</b>
Inspector:	<b>Pearl Boelter, Robert Denman</b>
Date/Time:	<b>5-26-16 / 10:15 am</b>

**Comments:**

**Background:**

Elm #2 elevator became non-functional, therefore preliminary inspection of system was performed. It was determined that system hydraulic fluid reservoir was excessively low. Considerable amount of fluid loss (approx. 50 to 100 gal.) could not be contributed to normal operation. Contractor was instructed to raise elevator so pit and associated equipment could be inspected. No obvious signs of hydraulic system failure were identified. Contractor isolated distribution piping connecting reservoir to actuator and performed pressure test on line. The piping would not maintain pressure, demonstrating the line had been breached. Distribution line is believed to be double-walled, but has not been confirmed.

**Recommendation:**

EHS recommends that a third party consultant conduct a risk analysis involving modeling that would address the risk to the surrounding environment (soil/water) and the risk to the residential population associated with approximately 100 gallons of hydraulic fluid under the Elm building.

**Mechanical Room**

Distribution Line

Reservoir

**Elevator Pit**

Distribution Line

Possible Annular Spacing

Good Morning;

In regards to Pipeline ID CAL0362, OSFM Line ID 0578, we have no data. The pipeline was idle since 1985 which later was officially abandoned. It used to belong to Chevron and for more information Chevron might be able to help you. Thanks

**Warning:** this message is from an external user and should be treated with caution.

Hossein—

See attached for the pipeline info provided on NPMS. It looks like it runs along the current Gymnasium Campus Drive in Fullerton.

Thanks,

**Lauren Kodama Roenicke, Environmental Scientist**

Hi Lauren;

The pipeline ID, CAL0362, you provided is not in our database. Will you please be more specific as where the pipeline location, street, is?

---

**Subject:** CAL0362 - Abandoned Pipeline - Abandonment Date

**Warning:** this message is from an external user and should be treated with caution.

Hossein—

I am looking for information on the abandonment date of the abandoned pipeline identified as CAL0362. This pipeline runs through Fullerton, California.

Thank you!

**Lauren Kodama Roenicke, Environmental Scientist**

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### TARGET PROPERTY INFORMATION

### ***Exclusive Recovered Govt. Archives***

CA RGA LF..... Recovered Government Archive Solid Waste Facilities List

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/25/2019 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 01/28/2019 has revealed that there are 20 CA ENVIROSTOR sites within approximately 1 mile of the target property.

### State and tribal leaking storage tank lists

CA LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CA LUST list, as provided by EDR, has revealed that there are 33 CA LUST sites within approximately 0.5 miles of the target property.

### Local Lists of Registered Storage Tanks

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 9 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

### **Records of Emergency Release Reports**

CA CHMIRS: The California Hazardous Material Incident Report System contains information on reported hazardous material incidents, i.e., accidental releases or spills. The source is the California Office of Emergency Services.

A review of the CA CHMIRS list, as provided by EDR, and dated 10/24/2018 has revealed that there are 2 CA CHMIRS sites within approximately 0.001 miles of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/25/2019 has revealed that there are 10 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2017 has revealed that there are 6 CA HAZNET sites within approximately 0.001 miles of the target property.

CA CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CA CERS list, as provided by EDR, and dated 04/09/2019 has revealed that there are 3 CA CERS sites within approximately 0.001 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

### EDR RECOVERED GOVERNMENT ARCHIVES

#### ***Exclusive Recovered Govt. Archives***

CA RGA LUST: The EDR Recovered Government Archive Leaking Underground Storage Tank database provides a list of LUST incidents derived from historical databases and includes many records that no longer appear in current government lists. Compiled from Records formerly available from the State Water Resources Control Board in California.

A review of the CA RGA LUST list, as provided by EDR, has revealed that there is 1 CA RGA LUST site within approximately 0.001 miles of the target property.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.  
Amount (Lbs): 23465  
Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS

USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 16900

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

contained a bleach residue. The bacteria and bleach mixture resulted in a chlorine emissions release. Upon smelling chlorine, students activated the facility's alarm. The university police department, local fire department, and the Huntington Beach Hazardous Materials Division responded to the scene. An estimated 30 personnel were evacuated from the building. The room was ventilated and the autoclave tagged as unserviceable. One student was evacuated to a nearby medical facility. The current status of the student was not known. After a safety inspection was completed, the staff and students were allowed to re-enter the building.

Violation Description: Failure to determine if the waste generated is a hazardous waste.  
Violation Notes: Returned to compliance on 07/28/2016. During the on site inspection, I reviewed two municipal trash dumpsters located outside the science building. In one dumpster I found a (1) gallon, plastic bottle of "concrete release". The bottle had about 1/2 cup of thick, viscous liquid inside. CSUF staff felt it was from a contract company retained to do concrete repairs on site. I also found in the second dumpster, (1) cardboard box. In the box were numerous "lab samples" used by the geology lab. The samples appeared to be soil samples mixed with unknown liquid inside test tubes and plastic containers (similar to syringe holders). It was unknown if these samples contained just water or another liquid that may be hazardous (ie. solvents). Make sure to conduct a HW determination before any building supplies or lab samples are disposed of the municipal trash. Please have this HW determination conducted on the two samples (concrete release and lab samples). If they are non hazardous, they may be thrown to the [Truncated]

S113180209

Violation Description: 15, Section(s) 66265.16  
Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Violation Notes: Returned to compliance on 10/01/2018. Employee safety training is being conducted on an annual basis. Training plan is missing the following: -Written job description for each position; description to include requisite skill, education and duties of facility personnel -Written description of the type and amount of both introductory and continuing education given to personnel Update training plan to include required information and provide a copy to this agency.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to comply with all of the following requirements: 1. Failure to conduct inspections and tests in accordance with written procedures that you or a certifying engineer have developed for the facility. 2. Failure to sign written procedures and/or a record of inspections and/or customary business records by the appropriate supervisor or inspector. 3. Failure to keep written procedures and/or a record of inspections and/or customary business records with the plan. AND 4. Failure to maintain written procedures and/or a record of inspections and/or customary business records for three years.

Violation Notes: Returned to compliance on 05/19/2014. The tanks subject to this SPCC (fuel AST, waste oil tank, emergency generators, hydraulic elevators if they meet SPCC requirements) need to be inspected at least monthly for leaks. The facility currently inspects them annually. Amend your SPCC to make these inspections monthly and begin monthly inspections. Submit the latest logs to this Agency in order to abate this violation.

Eval Type: Routine done by local agency  
Eval Notes: On site for routine aboveground petroleum storage tank (APST) inspection. The inspection was conducted with Robert Denman, environmental compliance specialist. The facility has petroleum storage above 10,000 gallons, there are some petroleum storage that needs to be added to their plan. All of the tanks and containers have secondary containment. The spill prevention countermeasure and control (SPCC) plan is dated 06/29/2015 and has not been reviewed since then, but the contact information and the transformers need to be added and updated. Employee training records for employees that conduct oil handling activities were available for review. Monthly inspection log was available for review.

metals have been tested and are not hazardous, the test results have been received and based upon the results, of the sample which was taken, the filters appear to be not hazardous waste. For the satellite accumulation waste latex paint, she said that this drum was miss labeled and they handle their waste latex paint as an excluded recyclable material. They have the paint recycled through a paint recycling program. For the Dr. Li?s drum, which was over the 90 day accumulation time, Pearl stated that this drum was once a satellite drum which had a one year start date of 01/26/2017 and they recently moved it into the hazardous waste storage area once it was full in August, they just did not put the full date on the drum. Based upon the information received [Truncated]

to enter and conduct inspection activities was provided by Michael Wilcox, Hazardous Materials Specialist. Accompanied on inspection by Susan Berg of Orange County Environmental Health and Leo Lopez of CSUF Environmental Health and Safety. Walked throughout the facility and observed the hazardous waste storage in the Visual Arts Building and the 90 Day Storage area. Observed the following: -multiple bags of lab waste to be missing "Hazardous Waste" and site address -multiple flammable cabinets to be missing the site address Photograph of completed label provided later in the day, violation I562 has been corrected. Employee training records and plan have been provided to this agency; violation I126 has been corrected. Manifest for the hauling of hazardous waste observed on site over the 90 day accumulation time limit have been provided to this agency. Violation I125 has been corrected. [Truncated]

Eval Notes: On site for the triennial Spill Prevention Control and Countermeasure (SPCC) inspection. Permission to inspect granted by CSUF/Plotkin and Mc Quinn. The facility had the SPCC on site and available for review. Tier I SPCC. It was updated on 4-16-14. The SPCC list has the following regulated tanks/containers: (1) 2,000 gallon, aboveground storage tank (AST), diesel/gasoline, double walled AST with flapper valve OFF. (20) back up generators located throughout the campus. All generators are double walled and contain diesel. 55 gallon drums located in the auto shop. The unloading area near the AST had spill kits that were unaccessible. See violations. The facility had annual inspection logs. Inspection logs must be monthly at a minimum. See violations. The training program does not specifically address SPCC issues. See violations. The site has 2 hydraulic elevator lifts that were not listed on the SPCC and an unknown number of office hydraulic [Truncated]

Eval Notes: While on site for the Hazardous Waste inspection, it was discussed that the campus had a hydraulic oil release on 3-21-16 from a leaking oil line to an elevator. We discussed that the OES notification was properly made and to make sure to list the leak on the SPCC in order to be in compliance. Formal review will be made during the next scheduled SPCC inspection.

Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11

Violation Description: Failure to determine if the waste generated is a hazardous waste.  
Violation Notes: Returned to compliance on 07/28/2016. During the on site inspection, I reviewed two municipal trash dumpsters located outside the science building. In one dumpster I found a (1) gallon, plastic bottle of "concrete release". The bottle had about 1/2 cup of thick, viscous liquid inside. CSUF staff felt it was from a contract company retained to do concrete repairs on site. I also found in the second dumpster, (1) cardboard box. In the box were numerous "lab samples" used by the geology lab. The samples appeared to be soil samples mixed with unknown liquid inside test tubes and plastic containers (similar to syringe holders). It was unknown if these samples contained just water or another liquid that may be hazardous (ie. solvents). Make sure to conduct a HW determination before any building supplies or lab samples are disposed of the municipal trash. Please have this HW determination conducted on the two samples (concrete release and lab samples). If they are non hazardous, they may be thrown to the [Truncated]

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to comply with all of the following requirements: 1. Failure to conduct inspections and tests in accordance with written procedures that you or a certifying engineer have developed for the facility. 2. Failure to sign written procedures and/or a record of inspections and/or customary business records by the appropriate supervisor or inspector. 3. Failure to keep written procedures and/or a record of inspections and/or customary business records with the plan. AND 4. Failure to maintain written procedures and/or a record of inspections and/or customary business records for three years.

Violation Notes: Returned to compliance on 05/19/2014. The tanks subject to this SPCC (fuel AST, waste oil tank, emergency generators, hydraulic elevators if they meet SPCC requirements) need to be inspected at least monthly for leaks. The facility currently inspects them annually. Amend your SPCC to make these inspections monthly and begin monthly inspections. Submit the latest logs to this Agency in order to abate this violation.

completed label provided later in the day, violation I562 has been corrected. Employee training records and plan have been provided to this agency; violation I126 has been corrected. Manifest for the hauling of hazardous waste observed on site over the 90 day accumulation time limit have been provided to this agency. Violation I125 has been corrected. [Truncated]

Eval Division: Orange County Environmental Health  
Eval Program: HWLQG  
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 04-17-2014  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On site for the triennial Spill Prevention Control and Countermeasure (SPCC) inspection. Permission to inspect granted by CSUF/Plotkin and Mc Quinn. The facility had the SPCC on site and available for review. Tier I SPCC. It was updated on 4-16-14. The SPCC list has the following regulated tanks/containers: (1) 2,000 gallon, aboveground storage tank (AST), diesel/gasoline, double walled AST with flapper valve OFP. (20) back up generators located throughout the campus. All generators are double walled and contain diesel. 55 gallon drums located in the auto shop. The unloading area near the AST had spill kits that were unaccessible. See violations. The facility had annual inspection logs. Inspection logs must be monthly at a minimum. See violations. The training program does not specifically address SPCC issues. See violations. The site has 2 hydraulic elevator lifts that were not listed on the SPCC and an unknown number of office hydraulic [Truncated]

Eval Division: Orange County Environmental Health  
Eval Program: APSA  
Eval Source: CERS

Eval General Type: Other/Unknown  
Eval Date: 06-23-2016  
Violations Found: No  
Eval Type: Other, not routine, done by local agency  
Eval Notes: While on site for the Hazardous Waste inspection, it was discussed that the campus had a hydraulic oil release on 3-21-16 from a leaking oil line to an elevator. We discussed that the OES notification was properly made and to make sure to list the leak on the SPCC in order to be in compliance. Formal review will be made during the next scheduled SPCC inspection.

Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11  
Violation Description: Failure to determine if the waste generated is a hazardous waste.  
Violation Notes: Returned to compliance on 07/28/2016. During the on site inspection, I reviewed two municipal trash dumpsters located outside the science building. In one dumpster I found a (1) gallon, plastic bottle of "concrete release". The bottle had about 1/2 cup of thick, viscous liquid inside. CSUF staff felt it was from a contract company retained to do concrete repairs on site. I also found in the second dumpster, (1) cardboard box. In the box were numerous "lab samples" used by the geology lab. The samples appeared to be soil samples mixed with unknown liquid inside test tubes and plastic containers (similar to syringe holders). It was unknown if these samples contained just water or another liquid that may be hazardous (ie. solvents). Make sure to conduct a HW determination before any building supplies or lab samples are disposed of the municipal trash. Please have this HW determination conducted on the two samples (concrete release and lab samples). If they are non hazardous, they may be thrown to the [Truncated]

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)

Violation Description: Failure to comply with all of the following requirements: 1. Failure to conduct inspections and tests in accordance with written procedures that you or a certifying engineer have developed for the facility. 2. Failure to sign written procedures and/or a record of inspections and/or customary business records by the appropriate supervisor or inspector. 3. Failure to keep written procedures and/or a record of inspections and/or customary business records with the plan. AND 4. Failure to maintain written procedures and/or a record of inspections and/or customary business records for three years.

Violation Notes: Returned to compliance on 05/19/2014. The tanks subject to this SPCC (fuel AST, waste oil tank, emergency generators, hydraulic elevators if they meet SPCC requirements) need to be inspected at least monthly for leaks. The facility currently inspects them annually. Amend your SPCC to make these inspections monthly and begin monthly inspections. Submit the latest logs to this Agency in order to abate this violation.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)  
Violation Description: Failure to adequately discuss facility tank car and tank truck loading/unloading rack within the plan.  
Violation Notes: Returned to compliance on 05/19/2014. The SPCC lists "spill kits/absorbent" as the leak prevention method for the "general containment" at the "loading area" near the fuel AST. During the inspection, there were (4) 55 gallon drums of absorbent but they were not located near the AST nor were they accessible. They were covered with wood and metal debris. Begin maintaining these spill kits near the AST and ready for use in order to meet spill prevention requirements.

Eval Notes: On site for the annual RCRA Large Quantity Generator (LQG) Hazardous Waste (HW) inspection. Permission to inspect granted by CSUF/Plotkin and Mc Quinn. Federal EPA ID # is correct and accurate. Facility is a RCRA LQG, manifesting about 20 tons of HW per year. Biennial report to USEPA is on site and current (2014). Formal, written employee training program was reviewed. OK. Plotkin is the designated trainer. Employee training records are on site (computer). Current and complete. All HW drums/totes/tanks were properly labeled with HW labels and accumulation dates. No spills or leaks. The trash cans were inspected and contained only municipal trash. HW storage areas were clean, no releases. All HW was within the 90 days storage time. All aerosol cans are stored on site and drained via puncturing on the same 90 days cycle. No TP required. There was only one (1) HW storage tank. A 100 gallon waste oil tank. This tank is non RCRA and does not need a

Eval Notes: On site for the triennial Hazardous Waste (HW) inspection. Permission to inspect granted by CSUF/Lopez and Wilcox. The campus is a Large Quantity Generator (LQG) of university maintenance and lab wastes. Wastes are being hauled away on a 90 day cycle. Manifests were reviewed and OK. All HW drums/containers were properly labeled with beginning accumulation dates. Universal Wastes (UW) were stored properly but did not have UW labels. See violations. Labels supplied with this report. HW management/storage area is in a locked area. Individual labs use the satellite accumulation exemption. CSUF staff review all the teaching labs daily for HW pickup. Research labs call staff for pick ups. All HW is then taken to the HW management area for hazard categorizing, drum storage and disposal. SB14 OK. Biennial report OK. Aisle space in the HW area is OK. Daily/weekly HW storage area logs OK. HMBEP on file with the FFD. Emergency response plan [Truncated]

Eval Notes: On site for routine aboveground petroleum storage tank (APST) inspection. The inspection was conducted with Robert Denman, environmental compliance specialist. The facility has petroleum storage above 10,000 gallons, there are some petroleum storage that needs to be added to their plan. All of the tanks and containers have secondary containment. The spill prevention countermeasure and control (SPCC) plan is dated 06/29/2015 and has not been reviewed since then, but the contact information and the transformers need to be added and updated. Employee training records for employees that conduct oil handling activities were available for review. Monthly inspection log was available for review.

Eval Notes: INSPECTOR COMMENTS Spoke with Pearl about the accumulation violations that she received for the filters with metals, Dr. Li's drum, and the satellite accumulation waste paint. Pearl stated that the filters with metals have been tested and are not hazardous, the test results have been received and based upon the results, of the sample which was taken, the filters appear to be not hazardous waste. For the satellite accumulation waste latex paint, she said that this drum was miss labeled and they handle their waste latex paint as an excluded recyclable material. They have the paint recycled through a paint recycling program. For the Dr. Li's drum, which was over the 90 day accumulation time, Pearl stated that this drum was once a satellite drum which had a one year start date of 01/26/2017 and they recently moved it into the hazardous waste storage area once it was full in August, they just did not put the full date on the drum. Based upon the information received [Truncated]

Violation Source: CERS

Site ID: 15492  
Site Name: CALIFORNIA STATE UNIVERSITY FULLERTON  
Violation Date: 06-23-2016  
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11

Violation Description: Failure to determine if the waste generated is a hazardous waste.

Violation Notes: Returned to compliance on 07/28/2016. During the on site inspection, I reviewed two municipal trash dumpsters located outside the science building. In one dumpster I found a (1) gallon, plastic bottle of "concrete release". The bottle had about 1/2 cup of thick, viscous liquid inside. CSUF staff felt it was from a contract company retained to do concrete repairs on site. I also found in the second dumpster, (1) cardboard box. In the box were numerous "lab samples" used by the geology lab. The samples appeared to be soil samples mixed with unknown liquid inside test tubes and plastic containers (similar to syringe holders). It was unknown if these samples contained just water or another liquid that may be hazardous (ie. solvents). Make sure to conduct a HW determination before any building supplies or lab samples are disposed of the municipal trash. Please have this HW determination conducted on the two samples (concrete release and lab samples). If they are non hazardous, they may be thrown to the [Truncated]

Violation Notes: and/or customary business records for three years. Returned to compliance on 05/19/2014. The tanks subject to this SPCC (fuel AST, waste oil tank, emergency generators, hydraulic elevators if they meet SPCC requirements) need to be inspected at least monthly for leaks. The facility currently inspects them annually. Amend your SPCC to make these inspections monthly and begin monthly inspections. Submit the latest logs to this Agency in order to abate this violation.

Eval Notes: On site for the annual RCRA Large Quantity Generator (LQG) Hazardous Waste (HW) inspection. Permission to inspect granted by CSUF/Plotkin and Mc Quinn. Federal EPA ID # is correct and accurate. Facility is a RCRA LQG, manifesting about 20 tons of HW per year. Biennial report to USEPA is on site and current (2014). Formal, written employee training program was reviewed. OK. Plotkin is the designated trainer. Employee training records are on site (computer). Current and complete. All HW drums/totes/tanks were properly labeled with HW labels and accumulation dates. No spills or leaks. The trash cans were inspected and contained only municipal trash. HW storage areas were clean, no releases. All HW was within the 90 days storage time. All aerosol cans are stored on site and drained via puncturing on the same 90 days cycle. No TP required. There was only one (1) HW storage tank. A 100 gallon waste oil tank. This tank is non RCRA and does not need a [Truncated]

Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On site for the triennial Hazardous Waste (HW) inspection. Permission to inspect granted by CSUF/Lopez and Wilcox. The campus is a Large Quantity Generator (LQG) of university maintenance and lab wastes. Wastes are being hauled away on a 90 day cycle. Manifests were reviewed and OK. All HW drums/containers were properly labeled with beginning accumulation dates. Universal Wastes (UW) were stored properly but did not have UW labels. See violations. Labels supplied with this report. HW management/storage area is in a locked area. Individual labs use the satellite accumulation exemption. CSUF staff review all the teaching labs daily for HW pickup. Research labs call staff for pick ups. All HW is then taken to the HW management area for hazard categorizing, drum storage and disposal. SB14 OK. Biennial report OK. Aisle space in the HW area is OK. Daily/weekly HW storage area logs OK. HMBEP on file with the FFD. Emergency response plan [Truncated]

Eval Notes: INSPECTOR COMMENTS Spoke with Pearl about the accumulation violations that she received for the filters with metals, Dr. Li's drum, and the satellite accumulation waste paint. Pearl stated that the filters with metals have been tested and are not hazardous, the test results have been received and based upon the results, of the sample which was taken, the filters appear to be not hazardous waste. For the satellite accumulation waste latex paint, she said that this drum was miss labeled and they handle their waste latex paint as an excluded recyclable material. They have the paint recycled through a paint recycling program. For the Dr. Li's drum, which was over the 90 day accumulation time, Pearl stated that this drum was once a satellite drum which had a one year start date of 01/26/2017 and they recently moved it into the hazardous waste storage area once it was full in August, they just did not put the full date on the drum. Based upon the information received [Truncated]

Citation: 22 CCR 15 66265.173 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.173  
Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.  
Violation Notes: Returned to compliance on 08/22/2018. -Three paint waste containers has a funnel in the bung hole that did not seal completely while not in use. -Maintain waste paint containers to be closed and sealed to prevent a release while not actively adding or removing waste.

Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11

Violation Description: Failure to determine if the waste generated is a hazardous waste.

Violation Notes: Returned to compliance on 07/28/2016. During the on site inspection, I reviewed two municipal trash dumpsters located outside the science building. In one dumpster I found a (1) gallon, plastic bottle of "concrete release". The bottle had about 1/2 cup of thick, viscous liquid inside. CSUF staff felt it was from a contract company retained to do concrete repairs on site. I also found in the second dumpster, (1) cardboard box. In the box were numerous "lab samples" used by the geology lab. The samples appeared to be soil samples mixed with unknown liquid inside test tubes and plastic containers (similar to syringe holders). It was unknown if these samples contained just water or another liquid that may be hazardous (ie. solvents). Make sure to conduct a HW determination before any building supplies or lab samples are disposed of the municipal trash. Please have this HW determination conducted on the two samples (concrete release and lab samples). If they are non hazardous, they may be thrown to the [Truncated]

Citation: 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16  
Violation Description: Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.

Violation Notes: Returned to compliance on 10/01/2018. Employee safety training is being conducted on an annual basis. Training plan is missing the following: -Written job description for each position; description to include requisite skill, education and duties of facility personnel -Written description of the type and amount of both introductory and continuing education given to personnel Update training plan to include required information and provide a copy to this agency.

Violation Date: 04-17-2014  
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)  
Violation Description: Failure to comply with all of the following requirements: 1. Failure to conduct inspections and tests in accordance with written procedures that you or a certifying engineer have developed for the facility. 2. Failure to sign written procedures and/or a record of inspections and/or customary business records by the appropriate supervisor or inspector. 3. Failure to keep written procedures and/or a record of inspections and/or customary business records with the plan. AND 4. Failure to maintain written procedures and/or a record of inspections and/or customary business records for three years.

Violation Notes: Returned to compliance on 05/19/2014. The tanks subject to this SPCC (fuel AST, waste oil tank, emergency generators, hydraulic elevators if they meet SPCC requirements) need to be inspected at least monthly for leaks. The facility currently inspects them annually. Amend your SPCC to make these inspections monthly and begin monthly inspections. Submit the latest logs to this Agency in order to abate this violation.

Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On site for routine aboveground petroleum storage tank (APST) inspection. The inspection was conducted with Robert Denman, environmental compliance specialist. The facility has petroleum storage above 10,000 gallons, there are some petroleum storage that needs to be added to their plan. All of the tanks and containers have secondary containment. The spill prevention countermeasure and control (SPCC) plan is dated 06/29/2015 and has not been reviewed since then, but the contact information and the transformers need to be added and updated. Employee training records for employees that conduct oil handling activities were available for review. Monthly inspection log was available for review.

Eval Notes:	INSPECTOR COMMENTS Spoke with Pearl about the accumulation violations that she received for the filters with metals, Dr. Li's drum, and the satellite accumulation waste paint. Pearl stated that the filters with metals have been tested and are not hazardous, the test results have been received and based upon the results, of the sample which was taken, the filters appear to be not hazardous waste. For the satellite accumulation waste latex paint, she said that this drum was miss labeled and they handle their waste latex paint as an excluded recyclable material. They have the paint recycled through a paint recycling program. For the Dr. Li's drum, which was over the 90 day accumulation time, Pearl stated that this drum was once a satellite drum which had a one year start date of 01/26/2017 and they recently moved it into the hazardous waste storage area once it was full in August, they just did not put the full date on the drum. Based upon the information received [Truncated]

Eval Notes: On site for the triennial Spill Prevention Control and Countermeasure (SPCC) inspection. Permission to inspect granted by CSUF/Plotkin and Mc Quinn. The facility had the SPCC on site and available for review. Tier I SPCC. It was updated on 4-16-14. The SPCC list has the following regulated tanks/containers: (1) 2,000 gallon, aboveground storage tank (AST), diesel/gasoline, double walled AST with flapper valve OFF. (20) back up generators located throughout the campus. All generators are double walled and contain diesel. 55 gallon drums located in the auto shop. The unloading area near the AST had spill kits that were unaccessible. See violations. The facility had annual inspection logs. Inspection logs must be monthly at a minimum. See violations. The training program does not specifically address SPCC issues. See violations. The site has 2 hydraulic elevator lifts that were not listed on the SPCC and an unknown number of office hydraulic [Truncated]

corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

File Location: Regional Board  
Local Case Number: Not reported  
Potential Media Affect: Aquifer used for drinking water supply  
Potential Contaminants of Concern: Gasoline  
Site History: A total of twelve borings have been drilled at the site. Methyl tertiary butyl ether (MtBE) was detected in soil at the site at concentrations greater than 1 milligram per kilogram (mg/kg) in six borings (MW-1, MW-2, MW-3, MW-4, VEW-6 and VEW-7). The highest concentration of MtBE detected was 25 mg/kg in a soil sample collected at a depth of 40 feet from Boring B2, completed as well VEW-1a/1b/MW-1. At 95 feet in this boring, MtBE was detected at a concentration of 2.9 mg/kg. Only one sample from this boring did not contain MtBE. It was collected 5 feet below the deepest detected MtBE at a depth of 120 feet. Vapor extraction has only been implemented intermittently at the site. Vapor samples collected from the wells indicated that MtBE vapor concentrations from four wells exceeded 10 parts per million by volume (ppmv) during the last dual phase extraction event on April 22, 2003: MW-1 (51 ppmv), MW-2 (11 ppmv), VEW-6A (23 ppmv), and VEW-6B (14 ppmv). The groundwater elevation has dropped as much as 18.74 feet since December of 1999. Due to dry wells, representative groundwater samples were unable to be collected from the on-site wells near the source area in May and August 2003. In well MW-6, the off-site well south of the site, MtBE was detected at a maximum of 812 a%g/l. On August 27, 2003, the MtBE detected in this well was 36.7a%g/l.

**CERS HAZ WASTE:**

Site ID: 276020  
CERS ID: 10544017  
CERS Description: Hazardous Waste Generator

**Violations:**

Site ID: 276020  
Site Name: COLLEGE PARK SERVICE, INC  
Violation Date: 04-11-2016  
Citation: HSC 6.7 25291 - California Health and Safety Code, Chapter 6.7, Section(s) 25291  
Violation Description: Failure to maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid.  
Violation Notes: Returned to compliance on 04/11/2016. Small amount of liquid present in 87 main and 87 auxillary STP sumps. Removed at time of inspection.  
Violation Division: Fullerton City Fire Department  
Violation Program: UST  
Violation Source: CERS

Site ID: 276020  
Site Name: COLLEGE PARK SERVICE, INC  
Violation Date: 04-03-2018  
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665

Violation Description: Failure of the overflow prevention system to meet one of the following requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.  
Violation Notes: Returned to compliance on 04/03/2018. Visual annunciator on overflow alarm failed to function. Bulb replaced and retested at time of inspection.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 08-18-2016  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On site to conduct a routine hazardous waste inspection. Consent to enter, inspect and take any necessary pictures was given by the Store Manager, Emilio Acevedo at 3:50 pm. The hazardous waste containers found here: - Gasoline Mixture (flammable liquid) = 25 gallons - Oily Absorbent = 75 pounds The hazardous waste containers were closed and labeled properly. The site maintains a spill log on-site and cleans up spills immediately. Walked the perimeter of the site, and there were no hazardous waste spills or discharges observed during this inspection. Weekly inspections are performed by the Store Manager. Emergency response information was posted. Per Mr. Acevedo the employees undergo annual training for hazardous waste management. Please contact Shruthi Sill at ssill@ochca.com with regards to any questions.

Eval Notes: OCHCA received a letter from Circle K Stores stating that they are the new owners of this gas station. They were requesting an "ownership change". I visited the site and got permission to inspect by Circle K/Alicia Davis. The HW had been hauled away and the facility had manifests. This file will be closed out and the new file (Circle K) will begin. RUR submitted for College Park SRVC/Mobil R/R #11189.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 08-18-2016  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On site to conduct a routine hazardous waste inspection. Consent to enter, inspect and take any necessary pictures was given by the Store Manager, Emilio Acevedo at 3:50 pm. The hazardous waste containers found here: - Gasoline Mixture (flammable liquid) = 25 gallons - Oily Absorbent = 75 pounds The hazardous waste containers were closed and labeled properly. The site maintains a spill log on-site and cleans up spills immediately. Walked the perimeter of the site, and there were no hazardous waste spills or discharges observed during this inspection. Weekly inspections are performed by the Store Manager. Emergency response information was posted. Per Mr. Acevedo the employees undergo annual training for hazardous waste management. Please contact Shruthi Sill at ssill@ochca.com with regards to any questions.

Site ID: 276020  
CERS ID: 10544017  
Site Name: COLLEGE PARK SERVICE, INC  
CERS Description: Chemical Storage Facilities

**Violations:**

Site ID: 276020  
Site Name: COLLEGE PARK SERVICE, INC  
Violation Date: 04-11-2016  
Citation: HSC 6.7 25291 - California Health and Safety Code, Chapter 6.7, Section(s) 25291  
Violation Description: Failure to maintain under-dispenser containment, sumps, and/or other secondary containment in good condition and/or free of debris/liquid.  
Violation Notes: Returned to compliance on 04/11/2016. Small amount of liquid present in 87 main and 87 auxillary STP sumps. Removed at time of inspection.  
Violation Division: Fullerton City Fire Department  
Violation Program: UST  
Violation Source: CERS

Site ID: 276020  
Site Name: COLLEGE PARK SERVICE, INC  
Violation Date: 04-03-2018  
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665

Violation Description: Failure of the overflow prevention system to meet one of the following requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Violation Notes: Returned to compliance on 04/03/2018. Visual annunciator on overflow alarm failed to function. Bulb replaced and retested at time of inspection.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System  
HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**H&S #26 (Continued)**

**S113468674**

Violation Description: Failure of the overfill prevention system to meet one of the following requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling.

Violation Notes: Returned to compliance on 07/30/2018. The light on the overfill alarm failed to function. Replaced at time of inspection.

Violation Division: Fullerton City Fire Department  
Violation Program: UST  
Violation Source: CERS

Site ID: 121812  
Site Name: H&S #26  
Violation Date: 12-27-2018  
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)

Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 12/27/2018. Observed the following containers to be missing the accumulation start date, physical property and hazardous property: -one 55 gallon drum of gasoline contaminated debris -one 55 gallon drum of gasoline contaminated water Labels were completed during inspection. Violation corrected on site.

Violation Division: Orange County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 121812  
Site Name: H&S #26  
Violation Date: 07-21-2015  
Citation: 23 CCR 16 2715 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715

Violation Description: Failure to comply with one or more of the designated operator monthly inspection requirements: failed to inspect the monthly alarm history report; attach a copy of the alarm history; failed to inspect for the presence of liquid or debris in the spill container/spill bucket and under dispenser containment; failed to inspect the under dispenser containment to ensure that monitoring equipment is placed in the proper position; failure to inspect for liquid or debris in the containment sump where an alarm occurred or for which there is no record of a service visit; or failure to check that all testing and maintenance has been completed and documented.

Violation Notes: Returned to compliance on 07/21/2015. D.O. inspection report failed to identify the cause of and response to 1/29/15 alarm of 87 fill sump sensor.

**CERS TANKS:**

Facility Name: H&S #26  
Site ID: 121812  
CERS ID: 10412701  
CERS Description: Underground Storage Tank

**Violations:**

Site ID: 121812  
Site Name: H&S #26  
Violation Date: 07-13-2017  
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)  
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.  
Violation Notes: Returned to compliance on 07/18/2017. Quantity of Carbon Dioxide submitted on inventory was incorrect.  
Violation Division: Fullerton City Fire Department  
Violation Program: HMRRP  
Violation Source: CERS

Site ID: 121812  
Site Name: H&S #26  
Violation Date: 07-21-2015  
Citation: 23 CCR 16 2715(c)(2) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2715(c)(2)  
Violation Description: Failure to comply with one or more of the following: maintain the spill bucket in good condition, containment free of debris/liquid, and/or to remove the contents of the spill bucket when a release/leak/spill was observed.  
Violation Notes: Returned to compliance on 07/21/2015. 87 fill bucket failed testing. Replaced and retested at time of inspection.  
Violation Division: Fullerton City Fire Department  
Violation Program: UST  
Violation Source: CERS

Site ID: 121812  
Site Name: H&S #26  
Violation Date: 07-30-2018  
Citation: 23 CCR 16 2665 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2665  
Violation Description: Failure of the overfill prevention system to meet one of the following requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and

generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS ID: 10453396  
CERS Description: Hazardous Waste Generator

Violations:

Site ID: 32061  
Site Name: MOBIL BLUE, INC.  
Violation Date: 11-19-2018  
Citation: 23 CCR 16 2641(j) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2641(j)

Violation Description: Failure of the leak detection equipment to be installed, calibrated, operated, and/or maintained properly.

Violation Notes: WPLLD'S FOR 87, 89, AND 91 IN ALARM DOZENS OF TIMES DATING BACK TO 12/2017 FOR "COMM FAILURE". FACILITY SHALL INVESTIGATE AND IDENTIFY CAUSE AND PERFORM REPAIRS UNDER PERMIT FROM THIS AGENCY.

Violation Division: Fullerton City Fire Department  
Violation Program: UST  
Violation Source: CERS

Site ID: 32061  
Site Name: MOBIL BLUE, INC.  
Violation Date: 08-26-2013  
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)

Violation Description: Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.

Violation Notes: Returned to compliance on 10/23/2013. The facility has (2) 5 gallon pails of "water/fuel" on site that were used for the UST/UDC testing in 8-2012. All other hazardous waste have not been hauled since 2-2013. As a small quantity generator (SQG) all hazardous waste must be hauled every 6 months. Immediately have all your hazardous wastes (waste oil/oil filters/parts washer solvent/radiator fluid and the UST test water) hauled away as hazardous wastes. Maintain all the manifests in order to verify proper disposal. This Agency will conduct a follow up inspection on/before 10-23-13 in order to verify proper disposal.

Eval Type: Routine done by local agency  
Eval Notes: On site to conduct the annual hazardous waste inspection. Permission to inspect was granted and observed by the business owner/Hajizadeh. All hazardous waste were stored in closed/proper containers (waste oil is in a UST). Emergency response plan on site. HW stored in a locked area. Trash and property were reviewed and no evidence of chemical disposal. The business was purchased from Mobil/Exxon by Mike Hajizadeh. The EPA ID # was already in his name and will remain the same. RUR to change the business from EXXon/Mobil to Fullerton University Mobil, Inc. The facility will no longer be a "Certified Used Oil Center". The HW was being stored over 180 days. See violations.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 08-26-2013  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On site to conduct the annual hazardous waste inspection. Permission to inspect was granted and observed by the business owner/Hajizadeh. All hazardous waste were stored in closed/proper containers (waste oil is in a UST). Emergency response plan on site. HW stored in a locked area. Trash and property were reviewed and no evidence of chemical disposal. The business was purchased from Mobil/Exxon by Mike Hajizadeh. The EPA ID # was already in his name and will remain the same. RUR to change the business from EXXon/Mobil to Fullerton University Mobil, Inc. The facility will no longer be a "Certified Used Oil Center". The HW was being stored over 180 days. See

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 04-14-2016  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On site for the triennial Hazardous Waste (HW) inspection. Permission to inspect granted by Smart & Final/Jackson. The facility is a small quantity generator (SQG) and is required to have the HW hauled away every 6 months. They are currently on a 90 day haul away cycle. EPA ID # is correct. Manifests reviewed and correct. All HW containers (5 gallon plastic boxes) are stored closed and properly labeled. All HW are identified by staff visual evaluation who identify the proper HW storage container. Weekly HW inspection logs OK. Annual HW training is OK. HMBEP is on file for FFD. Dumpster and perimeter review showed no HW. No violations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.  
Amount (Lbs): 4140

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.  
Amount (Lbs): 1305

Waste code: D004  
Waste name: ARSENIC  
Amount (Lbs): 1733

Waste code: D005  
Waste name: BARIUM  
Amount (Lbs): 2993

Waste code: D006  
Waste name: CADMIUM  
Amount (Lbs): 9

Waste code: D007  
Waste name: CHROMIUM  
Amount (Lbs): 2997

Waste code: D008  
Waste name: LEAD  
Amount (Lbs): 33

Waste code: D010  
Waste name: SELENIUM  
Amount (Lbs): 1733

Waste code: D011

**FINDS:**

Registry ID: 110006482083

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: Chapter 12, Section(s) 66262.34(f)  
Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 12/27/2018. Observed one 330 gallon container of used oil to not be labeled with any required hazardous waste labeling elements. Label was provided and completed during inspection. Violation corrected on site.

Violation Division: Orange County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 416983  
Site Name: FULLERTON 76  
Violation Date: 12-27-2018  
Citation: HSC 6.5 25250.22 - California Health and Safety Code, Chapter 6.5, Section(s) 25250.22

Violation Description: Failure to properly manage used oil and/or fuel filters in accordance with the requirements.

Violation Notes: Returned to compliance on 12/27/2018. Observed one 55 gallon drum of used oil filters to not be labeled. Label was provided and completed during inspection. Violation corrected on site.

Violation Division: Orange County Environmental Health  
Violation Program: HW  
Violation Source: CERS

Site ID: 416983  
Site Name: FULLERTON 76  
Violation Date: 01-08-2018  
Citation: HSC 6.7 25290.1(c),25290.2(c),25291(a)(2),2529.1(e) - California Health and Safety Code, Chapter 6.7, Section(s) 25290.1(c),25290.2(c),25291(a)(2),2529.1(e)

Violation Description: Failure to maintain secondary containment (e.g., failure of secondary containment testing).

Violation Notes: Returned to compliance on 04/23/2018. UDC #7/8 failed secondary containment testing on 2/3/17. No copy of these test results was received by this agency (see violation this date). Repairs and retesting performed.

Violation Division: Fullerton City Fire Department

**Violations:**

Site ID: 112165  
 Site Name: Dollar Tree #04437  
 Violation Date: 01-25-2016  
 Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)  
 Violation Description: Failure to complete and electronically submit a site map with all required content.  
 Violation Notes: Returned to compliance on 03/18/2016. SITE MAP NEEDS UPDATING: Map needs to include, riser location, FDC (fire department connection) location, updated chemical locations, all exits (currently the map shows a rear exit that does not exist and an exit that exists but is not on map) On chemical inventory page show grid number of helium location  
 Violation Division: Fullerton City Fire Department  
 Violation Program: HMRRP  
 Violation Source: CERS

**Evaluation:**

Eval General Type: Compliance Evaluation Inspection  
 Eval Date: 07-18-2017  
 Violations Found: No  
 Eval Type: Routine done by local agency  
 Eval Notes: INSPECTOR COMMENTS On site for a routine hazardous waste inspection. Consent to inspect and take any necessary photos was given by Roger Esquivel, Assistant manager. Walked throughout the facility. Observed hazardous waste storage areas. Waste is stored in the back of the store. Containers were closed and properly labeled. Manifests were available and reviewed. Employees are reported to be trained. Emergency plan is posted in the front office. The dumpster/enclosure was observed, no signs of dumping. Ownership and employee count were confirmed.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 01-28-2019  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On site to conduct a routine hazardous waste inspection. The inspection was conducted with BJ Mandalia and Jeff Silber (Store Managers). This facility is verified to be owned by 99 CENTS ONLY STORES LLC and currently has 28 employees. Walked throughout the facility and observed the hazardous waste storage area located in the warehouse. This facility currently generates the following hazardous waste: - 1 x 30-gallon container of waste corrosives (acidic) - 1 x 30-gallon container of waste corrosives (basic) - 2 x 30-gallon containers of waste aerosols - 1 x 30-gallon container of waste oxidizers - 1 x 30-gallon container of universal waste Per Mr. Silber, hazardous waste storage areas are currently inspected daily. Hazardous waste manifests were available for review during today's inspection. The emergency response plan information was available for review near the hazardous waste storage area in the warehouse. No hazardous waste or universal waste was [Truncated]

to inspect granted by University Shell/Chen. EPA ID # OK. Facility is a Conditionally Exempt Small Quantity Generator (CESQG) and must have the HW hauled away within 90 days after 27 gallons have been accumulated. Last manifest (UST related testing waste) was 11-2012. No HW was being stored on site at this time. FFD HMBEP on file. \*\*NOTE\*\* the waste soil generated as part of the car wash construction may need to be managed as HW. Please make sure the consultant tests the waste before disposal. Perimeter and trash had no HW. ER card on site and posted.

Eval Notes: On site to conduct a routine hazardous waste inspection. This facility is verified to be owned by H C INTERNATIONAL CORP and currently has 8 employees. Walked throughout the facility and observed the outdoor trash/dumpster enclosure area. Observed two stacked and closed 55-gallon metal drums. Mr. Lau stated that he is unaware of the contents in the drums or if the facility generates hazardous waste. A follow-up will be conducted by this agency. The facility owner/contact on file will be contacted by this agency to verify the contents of the metal drums and status of the facility.

Eval Date:	02-21-2019
Violations Found:	No
Eval Type:	Routine done by local agency
Eval Notes:	On site to conduct a routine hazardous waste inspection. This facility is verified to be owned by H C INTERNATIONAL CORP and currently has 8 employees. Walked throughout the facility and observed the outdoor trash/dumpster enclosure area. Observed two stacked and closed 55-gallon metal drums. Mr. Lau stated that he is unaware of the contents in the drums or if the facility generates hazardous waste. A follow-up will be conducted by this agency. The facility owner/contact on file will be contacted by this agency to verify the contents of the metal drums and status of the facility.

Eval Type: Routine done by local agency  
Eval Notes: On site to conduct a routine hazardous waste inspection. This facility is verified to be owned by H C INTERNATIONAL CORP and currently has 8 employees. Walked throughout the facility and observed the outdoor trash/dumpster enclosure area. Observed two stacked and closed 55-gallon metal drums. Mr. Lau stated that he is unaware of the contents in the drums or if the facility generates hazardous waste. A follow-up will be conducted by this agency. The facility owner/contact on file will be contacted by this agency to verify the contents of the metal drums and status of the facility.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Evaluation:  
Eval General Type: Compliance Evaluation Inspection  
Eval Date: 04-13-2016  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On site for routine tiered permitting inspection for the conditionally exempt tier. The inspection and document review were conducted with Jose Salas. James Hendron (OCHCA) was also present for the inspection. Facility generates waste water and filter cake that is hazardous for copper. The facility conducts treatment of the waste water which is disposed of to the sewer under permit. Facility sends approximately 50 gallons of hazardous waste (spent etch bath) per month to the treatment system. The filter cake is processed approximately once per year and hauled as a hazardous waste. The following documents are available for review: inspection log, and treatment log. The written operating instructions were not available. Please send a copy of these instructions to this Agency.

Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: On site for a routine hazardous waste inspection. Inspection was conducted with Jose Salas who gave permission to conduct the inspection. James Hendron (OCHCA) was also present at the inspection. Facility generates filter cake containing copper and waste tin and lead. The tin and lead are sent for recycling by Salvage One. Hazardous waste container was not labeled (see violation). A label was placed on the container at the inspection. This violation is abated and no further action is required. Facility sends the spent etchant through the treatment system. The sludge from the system is processed approximately once per year and the waste hauled at that time. Manifests were available for review. Facility is assigned and using EPA ID# CAR000163709. Facility's number is inactive per DTSC website. Discussed this with the operator. Mr. Salas states that they recently sent information to reactivate their number. Please note, facility's hazardous waste hauler has [Truncated]

Violations Found: Yes  
Eval Type: Routine done by local agency

Eval Notes: On site for a routine hazardous waste inspection. Inspection was conducted with Jose Salas who gave permission to conduct the inspection. James Hendron (OCHCA) was also present at the inspection. Facility generates filter cake containing copper and waste tin and lead. The tin and lead are sent for recycling by Salvage One. Hazardous waste container was not labeled (see violation). A label was placed on the container at the inspection. This violation is abated and no further action is required. Facility sends the spent etchant through the treatment system. The sludge from the system is processed approximately once per year and the waste hauled at that time. Manifests were available for review. Facility is assigned and using EPA ID# CAR000163709. Facility's number is inactive per DTSC website. Discussed this with the operator. Mr. Salas states that they recently sent information to reactivate their number. Please note, facility's hazardous waste hauler has [Truncated]

Evaluation:  
Eval General Type: Compliance Evaluation Inspection  
Eval Date: 04-13-2016  
Violations Found: No  
Eval Type: Routine done by local agency  
Eval Notes: On site for routine tiered permitting inspection for the conditionally exempt tier. The inspection and document review were conducted with Jose Salas. James Hendron (OCHCA) was also present for the inspection. Facility generates waste water and filter cake that is hazardous for copper. The facility conducts treatment of the waste water which is disposed of to the sewer under permit. Facility sends approximately 50 gallons of hazardous waste (spent etch bath) per month to the treatment system. The filter cake is processed approximately once per year and hauled as a hazardous waste. The following documents are available for review: inspection log, and treatment log. The written operating instructions were not available. Please send a copy of these instructions to this Agency.

Eval Notes: INSPECTOR COMMENTS Orora Visual Orange County 1600 E Valencia Drive Fullerton, CA 92831 Facility has just gone through an ownership change and they are in the process of updating their EPA ID#. On site for a change of ownership hazardous waste inspection. Consent to inspect and take any necessary photos was given by John Rigney, general manager. Walked throughout the facility. Observed hazardous waste storage areas. Facility is a digital print shop, they generate a very small amount of silver recovery photo waste. Containers were closed and properly labeled. Manifests were not available and reviewed, facility has not had any waste hauled since the change of ownership. Employees are reported to be trained. Emergency plan is posted near the front office area. The dumpster was observed, no signs of dumping. Ownership and employee count were confirmed facility is owned by orora packaging and have 87 employees.

Eval Notes: INSPECTOR COMMENTS Orora Visual Orange County 1600 E Valencia Drive Fullerton, CA 92831 Facility has just gone through an ownership change and they are in the process of updating their EPA ID#. On site for a change of ownership hazardous waste inspection. Consent to inspect and take any necessary photos was given by John Rigney, general manager. Walked throughout the facility. Observed hazardous waste storage areas. Facility is a digital print shop, they generate a very small amount of silver recovery photo waste. Containers were closed and properly labeled. Manifests were not available and reviewed, facility has not had any waste hauled since the change of ownership. Employees are reported to be trained. Emergency plan is posted near the front office area. The dumpster was observed, no signs of dumping. Ownership and employee count were confirmed facility is owned by orora packaging and have 87 employees.

Eval Notes: 7/14/16 - Graphic Tech Inc On site to conduct a routine hazardous a routine hazardous waste inspection. Consent to enter, inspect and take any necessary photos was given by Director of digital operations, Jimmy Chang at 2:45 pm. The hazardous waste containers found here: - Silver Waste = 100 pounds - Fluorescent light bulbs = 80 items - Solvent mixture = 110 gallons All containers of hazardous waste were covered and but not labeled. Manifests were available and were reviewed and waste was picked up by Safety Kleen. Walked the perimeter of the site, and there were no hazardous waste spills or discharges observed during this inspection. Emergency response sticker with the necessary information was posted inside the break room. The 40 yard bins were visually inspected no hazardous waste was observed. Large recycle bins within the screen printing warehouse had labels that told the employees to only dispose paper waste. The weekly inspections are by [Truncated]

inspect granted by Kraft/Carlos Morales. The facility is a packager of Kraft packaged meals. No food is processed at this site, only packaging. Most HWs are from machinery maintenance, refrigerant oil and E-wastes. The lead acid batteries and diesel fuel waste were one time wastes and are deleted on this inspection. This year had a one time generation of heavy metal liquid waste from a storage area clean out. Due to process changes and waste minimization, several HWs (waste oil and alcohol based inks have been reduced significantly). The facility is a small quantity generator (SQG) however, the facility maintains a 90 day disposal cycle. No SB 14 required. All manifests were reviewed and complete. All generator and TSDf copies were on site. All HW drums were stored closed, in secondary containment areas and labeled properly with accumulation dates. All HMBEP were submitted with [Truncated]

**Violations:**

Site ID: 476122  
Site Name: Kraft Foods  
Violation Date: 05-06-2010  
Citation: 2014-0057-DWQ - Industrial General Permit  
Violation Description: SW - Deficient BMP Implementation  
Violation Notes: One of three biocide cartridges found on roof, open to storm water. Track out of battery-acid found outside of ramp from enclosed charging station area. Emergency shower inside of charging area threatens to wash acid outside. Staining beneath trash compactor along with nearby roof drains and emergency shower threaten to wash the pollutants away.

Site ID: 476122  
Site Name: Kraft Foods  
Violation Date: 08-23-2010  
Citation: 2014-0057-DWQ - Industrial General Permit  
Violation Description: Unauthorized Discharge  
Violation Notes: Observe staining on asphalt leading from a mechanical room door where chiller equipment is located. Contact stated that the chillers had been maintained and washed down. Contact stated that City staff also told them that the discharge is not allowed: 'only storm water' is allowed. Contact stated that they would clean up the staining.

Evaluation:  
Eval General Type: Other/Unknown  
Eval Date: 03-19-2009  
Violations Found: Yes  
Eval Type: Construction Storm Water Compliance Evaluation  
Eval Notes: Regional Board staff conducted a drive-by inspection of the above facility on March 19, 2009. All industrial activities seem to remain the same and the facility is open for business. An enforcement letter will be sent to the facility notifying them to pay any outstanding invoices or be administratively terminated.  
Eval Division: Water Boards  
Eval Program: INDSTW  
Eval Source: SMARTS

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 05-06-2010  
Violations Found: Yes  
Eval Type: Industrial Storm Water Compliance Evaluation  
Eval Notes: Observed shed where electrical material handling equipment is charged. Bay door is open and inside is an emergency shower with no floor drain. Floor is corroded and dry battery acid is visible along with track-out to ramp leading outside. Contact indicated this area is to be remodeled. Observed 2 scrap metal bins; one with hinged lid, other with no lid. Hinged bin couldn't be closed since large oversized cardboard placed inside prevented this. Other bin contained an unidentified powder at the bottom. Outdoor trash compactor has much staining beneath it; used to wash this area but told not to by fire dept. inspectors. Area is still subject to rainfall, a roof downspout is nearby along with another emergency shower. Observed an oil-water separator dripping water onto parking area asphalt. Separator treats compressor blow-down. Three biocide cartridges on roof; one is open and exposed. SWPPP doesn't show all outdoor industrial process with related BMPs; needs to be updated according to Section A of Permit.

Eval Division: Water Boards  
Eval Program: INDSTW  
Eval Source: SMARTS

Eval General Type: Case Development Inspection  
Eval Date: 08-23-2010  
Violations Found: Yes  
Eval Type: Industrial Storm Water Enforcement Follow-up  
Eval Notes: Battery charging room and ramp are cleaner; contact explained that the floor had been washed and the rinsate collected for disposal. Trash compactor area is also cleaner; discussed relocating roof down drain away from this area and removing the nearby emergency shower. Contact showed oil absorbent pads that had been purchased for leaking equipment. Scrap metal bins found with closed lids and air compressor has been plumbed to drain to a bucket for manual disposal; a sump/pump is planned for later. Found staining on asphalt leading from mechanical room containing chillers; contact stated that the chillers had been cleaned during routine maintenance. Contact stated that they had also been informed by City inspectors that this discharge was not allowed; Contact was informed that this was a prohibited discharge and a violation. Contact stated that they'll clean up the staining. Outside area is generally neat and orderly.

Eval Division: Water Boards  
Eval Program: INDSTW  
Eval Source: SMARTS

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 12-20-2012  
Violations Found: Yes  
Eval Type: Industrial Storm Water Compliance Evaluation  
Eval Notes: Weather: Sunny and cool. SWPPP dated 6/2/1991; updated 4/7/2010. Results for storm water samples taken 11/28/2012 show SC of 6100 and 5720 and pH of 2.03 and 2.07 respectively for discharges at the SE and SW drainage points. Contact was unable to explain the results. Inspection showed no obvious causes but potential pollutant sources are present. Site was found generally neat and orderly except for dried spill of white liquid at south-central personnel door.

Eval Division: Water Boards  
Eval Program: INDSTW  
Eval Source: SMARTS

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 03-14-2001  
Violations Found: No  
Eval Type: Industrial Storm Water Compliance Evaluation  
Eval Notes: The AR 99/00 did not include lab reports. The results were within the benchmark range. The facility was clean with no storage or activities outddor. Some minor housekeeping was needed at the sampling point near the rear of the facility.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/11/2019	Source: EPA
Date Data Arrived at EDR: 04/18/2019	Telephone: N/A
Date Made Active in Reports: 05/14/2019	Last EDR Contact: 06/06/2019
Number of Days to Update: 26	Next Scheduled EDR Contact: 07/15/2019
	Data Release Frequency: Quarterly

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/25/2019	Source: Environmental Protection Agency

## ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Number of Days to Update: 34	Next Scheduled EDR Contact: 07/08/2019
	Data Release Frequency: Quarterly

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### ***Local Brownfield lists***

### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 12/17/2018	Source: Environmental Protection Agency

## Local Lists of Hazardous waste / Contaminated Sites

### US HIST CDL: National Clandestine Laboratory Register

A listing of clandestine drug lab locations that have been removed from the DEAs National Clandestine Laboratory Register.

Date of Government Version: 02/24/2019	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 02/26/2019	Telephone: 202-307-1000
Date Made Active in Reports: 04/17/2019	Last EDR Contact: 05/24/2019
Number of Days to Update: 50	Next Scheduled EDR Contact: 09/09/2019
	Data Release Frequency: No Update Planned

### HIST CAL-SITES: Calsites Database

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005	Source: Department of Toxic Substance Control
Date Data Arrived at EDR: 08/03/2006	Telephone: 916-323-3400
Date Made Active in Reports: 08/24/2006	Last EDR Contact: 02/23/2009
Number of Days to Update: 21	Next Scheduled EDR Contact: 05/25/2009
	Data Release Frequency: No Update Planned

### SCH: School Property Evaluation Program

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 01/28/2019	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 01/29/2019	Telephone: 916-323-3400
Date Made Active in Reports: 03/05/2019	Last EDR Contact: 04/30/2019
Number of Days to Update: 35	Next Scheduled EDR Contact: 08/12/2019
	Data Release Frequency: Quarterly

### CDL: Clandestine Drug Labs

A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

Date of Government Version: 12/31/2017	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 06/12/2018	Telephone: 916-255-6504
Date Made Active in Reports: 08/06/2018	Last EDR Contact: 05/02/2019

## CERS HAZ WASTE: CERS HAZ WASTE

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, and RCRA LQ HW Generator programs.

Date of Government Version: 04/09/2019	Source: CalEPA
Date Data Arrived at EDR: 04/11/2019	Telephone: 916-323-2514
Date Made Active in Reports: 05/08/2019	Last EDR Contact: 04/11/2019
Number of Days to Update: 27	Next Scheduled EDR Contact: 08/05/2019
	Data Release Frequency: Quarterly

## US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 02/24/2019	Source: Drug Enforcement Administration

## **Local Lists of Registered Storage Tanks**

### SWEEPS UST: SWEEPS UST Listing

Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

Date of Government Version: 06/01/1994	Source: State Water Resources Control Board
Date Data Arrived at EDR: 07/07/2005	Telephone: N/A
Date Made Active in Reports: 08/11/2005	Last EDR Contact: 06/03/2005
Number of Days to Update: 35	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

### UST MENDOCINO: Mendocino County UST Database

A listing of underground storage tank locations in Mendocino County.

Date of Government Version: 12/04/2018	Source: Department of Public Health
Date Data Arrived at EDR: 12/06/2018	Telephone: 707-463-4466
Date Made Active in Reports: 12/14/2018	Last EDR Contact: 05/24/2019
Number of Days to Update: 8	Next Scheduled EDR Contact: 09/09/2019
	Data Release Frequency: Annually

### HIST UST: Hazardous Substance Storage Container Database

The Hazardous Substance Storage Container Database is a historical listing of UST sites. Refer to local/county source for current data.

### DEED: Deed Restriction Listing

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 03/04/2019	Source: DTSC and SWRCB

Number of Days to Update: 50	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## Other Ascertainable Records

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Date of Government Version: 03/25/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/27/2019	Telephone: (415) 495-8895

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

Data Release Frequency: Quarterly

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Next Scheduled EDR Contact: 09/16/2019  
Data Release Frequency: Annually

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

## RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 04/02/2019	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/02/2019	Telephone: 202-343-9775
Date Made Active in Reports: 05/14/2019	Last EDR Contact: 04/02/2019
Number of Days to Update: 42	Next Scheduled EDR Contact: 07/15/2019
	Data Release Frequency: Quarterly

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 12/17/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 03/17/2008

Data Release Frequency: Varies

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## WASTEWATER PITS: Oil Wastewater Pits Listing

Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## LOS ANGELES CO LF METHANE: Methane Producing Landfills

This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 02/11/2019	Source: Department of Energy & Environmental Protection
Date Data Arrived at EDR: 02/12/2019	Telephone: 860-424-3375
Date Made Active in Reports: 03/04/2019	Last EDR Contact: 05/14/2019

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## FEMA FLOOD ZONE

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06037C1875F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06059C0063J	FEMA FIRM Flood data
06059C0044J	FEMA FIRM Flood data

06059C0151J	FEMA FIRM Flood data

## NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
LA HABRA	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### *Site-Specific Hydrogeological Data\*:*

Search Radius:	1.25 miles
Status:	Not found

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>

7G	1/2 - 1 Mile SE	S

For additional site information, refer to Physical Setting Source Map Findings.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: MOCHO

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil

### LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Department of Fish and Wildlife

Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

#### California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

#### California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

### RADON

#### State Database: CA Radon

Source: Department of Public Health

Telephone: 916-210-8558

Radon Database for California

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

### OTHER

Airport Landing Facilities: Private and public use landing facilities

Source: Federal Aviation Administration, 800-457-6656

Epicenters: World earthquake epicenters, Richter 5 or greater

Source: Department of Commerce, National Oceanic and Atmospheric Administration

California Earthquake Fault Lines: The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines, prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Rincon were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

## Certified Sanborn Results:

**PO #** 18-06014

**Project** NA

### UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results

Certification #: 3D22-44F2-AF0C

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

*The Sanborn Library LLC Since 1866™*

### Limited Permission To Make Copies

Rincon (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.
